

Line of Prayer

Collected works

by Bastiaan Oostendorp

Silver Line - Bronze Line
Blue Line - Green Line
Orange Line - Yellow Line

Foreword

Dear Reader,

In your sight lays this book of my light,
The light inspired by the line of prayers.
Each point in the line is a prayer about the subjects who calls
our attention during life.

the wish for world peace, the desire for happiness,
The need for knowledge.

The light to have warmness in the cold winter,
The warmth of healing of sickness.

The light in which we walk during the day gives us
wisdom to coordinate our goals and purposes.

The light we can share by our intentions of goodness,
calmness and compassion.

May that light shine in our spirits and souls.
To give the whole of humanity a good glance of
true and real values.

The values which we recognize in the writins of the saints and
good philosophers.

In our quest for a society without pain, suffering and defects.

May the Allmighty bless us with His attention.

My Prayer

Allmighty One,
May we treat you with esteem.
May we respect you.

Allmighty One,
Give the damned ones salvation,
Save the lost ones.

Allmighty One,
Give your influence to:
The earth,
Our country,
the governemnt,
The top of society.

Allmighty,
Help saving wounded and sick people.
Help giving the poor their basical needs.
Help giving the unemployed ones with work.

Allmighty,
Help us ruling and serving in this world.
Help those who cannot help themselves anymore.
Help those who are willing to serve you.

Allmighty,
Grant us your wisdom, your power, your advice.
Grant us health and long life.
Grant us to be usefull for you.
Grant us your mercy.

Allmighty,
Thank you for what you give me.
Thank you for who you are in my life.

Allmighty.
I ask your judgement on my life, my soul, my spirit.

Allmighty,
I ask for your help, to live according to your laws and rules.
I ask for your protection, to keep me on the path of righteousness.
I ask for your protection, to keep goodness in my hearth.
I ask for your protection, life and consiousness.

My Values

In society there are traditions, cultures, sciences and all kinds of beliefs.

People believe in values and try to do according them.

In society, our peace is the value of mutual understanding and mutual communication.

My Values, In a lot of holy writings values are given to stimulate peace, wisdom and happy living.

Values in writings are based on the goal certain writers had.

For example in Hinduism cows are holy, may not be killed or wounded. In our western society we see that value of them but we think it is not a realistic value, and not very effective.

For example in christianity it is a value that humans of feminine side may not be leaders or experts. That is for nochristians a stupid belief.

And values from buddhism are also in eyes of others a bit strange.

To give the values strength of effectiveness we have to understand what their meaning was, which problem it solved, and how they were made.

For example if a value is made by a temporarily believe in unrealistic things, like fantasy then it is not very during.

The values, by living, and by experience are the highest class of values, of truth. Because they are made by experience and based on true situations.

Values from books, are class 2. They are proofed by people following those values.

Books have a length of proof. As long as people feel those values being good they follow it, if its not any longer used, the books are destroyed or forgotten.

Class 3, values are those being told by people being victim of it. Sick people complain they are not helped caring for their problem. Poor people complain saying they have to steal or are with hunger.

My Values,

Valued high is effectiveness. By living you get experience. If you play your whole life. You in the end have loss of all things necessary in living. A house, Work, Property.

Valued high is realism. If you think of all things not existing, you get desires. And if the desires are not fullfilled, one get angry or dissapointed.

Value your reality. Value your life.

Valued high is virtue. Doing with intention of goodness, Thinking of all that is true or real. Put your goal of wisdom.

Valued high. Taking serious wisdom of religions and spirituality.

My View

Good reader,

May i wish you goodluck and goodlife. I myself am a philosopher, and a creationist. But most of all, i believe in one of the biggest powers of this reality. My i introduce you to Him. He is not called with human forms, or characteristics of personality. He is named by some marks, such as Allmighty, Omnipresent, Allknowing. Just name it with that kind of words. If you fill it in as him being human, you loose the intepretation.

If you would like to get more known with this subject. Do not read books of inferior classification. But read the source of religion by their holy writings.

Or by praying, ask or say what you like to this power. Ask this power to enter your life, ask him to change you.

May this power, the Allmighty proof to you he exists and what he can be for you. May he give you prosperity, and peace.

Right and Plight

As humanity we have inborn rights, named and acted as our feelings.

As humanity we have rights, named in the lawbook and acted by citizens.

As humanity we have rights, named by tradition and passed on from parents to children.

May our race be successful, and be blessed with virtue.

The rights are for example, allowing to be educated, allowing to be protected, allowing to have homes.

But another side of the coin is plight.

What must we do, what can we do. What is obliged.

In my opinion we have as the society the plight to help everyone, every part in our species to have the feeling of peace and ability to live without pain or suffering.

In this plight, a poor one get basic shelter, food and clothing.

In this plight, a very sick person, gets care and treatment.

In this plight, an old person, can live and pass on wisdom.

In this plight, it is investigated if citizens are being treated rightfully.

So they are not forced to criminality.

You & You

In the future we will see what the history has been.

We will see, we used earth and what's on it for our pleasure.

We will see, we disrespect our natural sources.

We will live in polluted areas, with kinds of diseases no unknown.

We will live, not in peace because of pain and suffering.

We will live, maybe cursing our history.

When we will be in the future. We will know extended means of living.

Being changed to cyborgs, changed to genetically modified beings.

Changed to nano versions of living entities.

We will have change, but not named good.

We will have effort, but not for our profit.

We will have chance, but we will name it with bad names.

May our future hold good things, for us. By the effort of today.

By the effort of saving natural resources, giving earth a good free time.

By the effort of renewing lost sources.

By the effort of using energy in a good and non destroying way.

Life. is not a noun but a verb.

Radio Emitter

With the current technology, we burst out a lot of waves into the atmosphere. Radio waves of all kind of electrons.

Radios receive the waves and play them according to its form. The Earth is being a loud source. We as humans don't experience it, but other life forms does.

A solution for this kind of invisible problem is by creating a harmonizing source of radio emitting waves.

Waves also electronic, but far more good and harmony. We as humans can do effort by reducing our radiotechnology and by creating points of compensation.

In my view there is a solution, a solution of good waves.

It maybe sound a bit untrue but you have to believe it, and make it to be effective.

Make a jar of metal, and a line of metal around a room or house.

The jar of metal can be of brass or copper. And connect the jar to the wire.

Then fill on a regularly basis the jar with normal water.

At first you do not notice any difference, but by time there starts to be more relaxation and rest. And you start feeling as if you have slept good.

These jars with wire is as sending waves of electrons around the spot and giving a point of free energy to all beings in the air, and around the place.

If you add this to your home, you will become more friendly, more effective in work and better in you relationships.

I wish you succes to this project.

I, myself made such a jar by asking a metalstore to saw a piece of a pipe of 10 cm diameter, and 10 cm long. and a plate of 12 by 12 cm. And put them together with glue.

Selfie

Selfie,

You make a photo of yourself. A photo by which others can see who you are. What you do or what your life is worth.

A photo is one point in a timeless range of moments.

A photo is a painting giving information about you.

If men are trained in psychology they can interpret what kind of personality you have, what hobbies or living you make.

And best of all if you are friendly or hatefull.

A selfie is more than a painting with modern tools. It is a view on karma.

Karma happens to people as giving justice to their lives. Justice which is put on their face as lines, scars etc,

Karma is a selfie made by the creator to give you feedback about your life as being good or bad.

My Selfie, is My current view on life. My view which holds values and norms as being peacefull, being friendly, helping those without good possibilities in life, Doing good things for badly sick persons.

My Selfie is more than a photo, it is a feeling ranging from moment to moment. And it is a View of my thoughts, from time to time.

May my selfie be known to karma.

People can use their selfie for communication, such as facebook or weblogs. But the selfie of which i speak is not for communication but for life itself.

Change thoughts of good and bad, and learn to act good. Learn what the value of good, or goodness is. Try behaving without leaving bad traces on earth.

May the good be prosperous, may the bad learn to change to a good living.

Wise ones

The society is formed by all kinds of individuals. From one color to another color, from one view on life to another view on life.

But society is built by a few ones who have a view on how the society acts and cooperates.

Society in other words is as a mountain of termites. They are quite good architects with their hills with air pipes etc.

society in our humanity has a place for all the individuals. and by the effort of many it gets the form it has.

But society is not always right or fair. Some people get lost, or get wounded.

Some people are poor, some are sick.

And it is not known if it has regular causes. (if we do not speak of karma)

Because that kind of things are not predictable it is hard to give it good way.

Because it is not predictable it is not fair.

It is one way to prevent such things by teaching people how to live. How to live good, without drugs or alcohol, with enough sport etc.

But even then there is a chance, without cause that you experience bad things.

By war a lot of people are killed,

By terror people are killed,

By disasters people are killed and wounded,

By diseases people are wounded.

To be able to have a righteous society we need all those not predictable things to be managed by the whole of society.

So in idealistic form we can say:

wounded people, people with diseases get compensation by treatment and basic income.

And poor people get compensation by basic income.

Wars are best being prevented by making bonds between countries.

Terror is best being treated by communication.

If society is healthy, everyone, not one missing will say, i have money, i'm healthy, or I'm being cared for.

Only the very rich people will feel a bit disappointed because instead of having three millions they have one million.

May our civilisation strive for the goodness of living.

May our civilisation care for the sick, poor and old ones.

May our society care for criminals by psychic treatment.

Good living and Good luck!

I wise

I'am who i am,
I can be, what is accepted for me.
I want to be, as being happy and safe.

What is the i in the lines of text.
Is it a pointer to a being, to a body, to a robot?
Is it a pointer, with consciousness as its observer.
Is it a pointer, pointing to feelings.

The I is the witness of both body and mind.
The I is a being, with coherent acts and needs.
The I is as a living being, talking about itself.
The I is selfconsciousness. The highest form of being aware of living.

Reality,
May it be the form of shared awareness.
What i see, is in some ways what you see.
Or others see who passes that situation or spot.

Reality. Is it real.
What is reality. Is it body and surroundings. Is it feelings and acts.
Are intentions real.

May Reality be known to everyone.
May the I witness reality.

Where reality is, there is problems, war, needs, feelings.
Where reality is, there is love, peace, happiness.

Reality. When someone is immersed in reality. One form with it.
Only seeing real, and experiencing reality.
And without seeing unreal things.

And without experiencing the unreal.
In some books, the mind is a source of illusionism.
In some books, the mind is unreal.

So enlightened beings, only are aware of reality.
Then the phrase that enlightened is as not doing in doing and
counterclockwise is a description of a real experience.

Awareness. It is done by stopping thought.
It is done by not starting in the morning with thinking.
It is done , praying for it at the Allmighty.

Awareness. Peace is your life.
Harmony is the result of good awareness.

Being Real

Real is Real.

Most people are not doubting their reality.

But when things happen, not very predictable, or very dangerous.

They doubt their reality.

What is Real. Is it a situation which is logical with relation to former situations.

Real, and Unreal. When we experience things, we do not know, cannot give a name. do not understand. We can sometimes doubt them as being real.

Children often see things they think as real. Then parents counter their view with their vision on it.

Sometimes, people wish for reality to proof them. Proofing that they exist. That they reached certain goals. That they are in respect to others in a certain way truesome.

Money, is a way of proofing reality to someone. By logical conclusion in money giving and spending, one sees. This is real.

Because in the past. I earned it and it was real backthen.

Money, is a way of giving reason to the reality. When someone works, and works with result of adding value to society, or reality.

Then it is experienced as a object of proof.

If money would not exist. People get everything without work, or by coincidence. People would not be forced anymore to work in reality.

Money is the bond between reality and the spirit.

Money is the chance of survival.

Money is the chance of fame.

Money is the chance of richness.

Reality. Sometimes fair, sometimes unfair.

Reality. Sometimes logic, Sometimes not.

Real is what we experience. What we cannot manipulate or change by attention alone.

Real is what is stable, what is not being destroyed by intention alone

devotion

Being religious, As named by religion is different.

In christianity its named faith,

In Hinduism it is named meditation and austerity.

In Islam it is named submission.

All religions have an object of addressing to.

In christianity it is Jesus Christ.

In Hinduism, there are three objects. Brahma, Vishnu and Shiva.

In Islam it is Allah.

They all represent object of intelligence, object of awareness.

It is in those religions that by talking to that object, that devotion is formed.

A devotion to a living entity, so believes the devotees, the practisers of religion.

In the past there were also other religions.

From objects like the earth, the sun, the source of the universe.

From objects of named gods like the air, the fire, the water.

From objects of statues of long forgotten heroes.

All those objects, had done a lot of changes in the world.

All those objects, by there influence were experienced by the practisers as being real. and with a certain benefit.

Religions in these days are only a couple. Hinduism, Christianity, Islam.

But these religion, after time and time also will disappear, and will diminish in form and value.

In the future times, new religions will arise. Will give their practisers profits and benefit.

In this time, i propose a religion which is the wheel in the car, and
the water in living beings with intelligence.

A religion, with one object. an object without human form. an object
without any form at all.

Not able to be thought of.

This religion you may name its object by one word only. one word
with the only true meaning.

An object named by one characteristic.

Name it Allmighty,

Name it Omnipresence,

Name it Allknowing,

Name it AllConsciousness.

Praying is talking to an invisible might.

Praying is not knowing what answer will come.

Praying is the truest speech there is.

Praying is asking influence of that might.

May that might proof to you his intention

Jesus Christ and faith

These times, religion is slowly diminishing. The old days where one religion was growing and giving meaning to the lives of them following it is slowly changing.

One of those religions, Christianity. with the main person as being Jesus Christ was for many people a savior. Jesus Christ, promised to everyone believing in His name, a good life, or a meaningful life. Many Christians prayed daily, and worked on a task. A task to give the world more peace, more welfare.

The churches were full from the tenth century to the twentieth century. But people forgot the benefits of such a way of life. Saints from the fifth to the twenty-first century taught and showed the people a good life.

Praying to Jesus Christ, or calling His name in dangerous situations would help.

So as the first prayer, of fishermen asking Jesus for a successful fishing. He just said, pull the fishnets on the other side. And they got a good catch.

So through times a lot of people had proven the power of a faith in Jesus Christ.

One option which also is a good life is surrendering to Jesus Christ.

(if you believe, and your faith is true, Jesus learns you how to live,
and gives you strength in difficult times.)

Krsna and devotion

Religions, in old time a safehouse for the future.
All kinds of religions have existed throughout time.
With all kinds of teachers, prophets, or other examples.

One of them is hinduism. With a sole person ruling all his followers.
Some name Him, Krsna,
Some name Him, Vishnu or Brahma.

He brings his practisers to heaven. a heavenly kingdom named
vrindavana.

He gives truth and peace.
He has a writing a book covering subjects about his wisdom.
Some read the Bagvad Gita, others Purana's

He also is named in older writings, such as aranyakas
writings read and spread by old people living in woods.

May he give peace to His devotees.

submission by Islam

The third religion with a prophet or messenger is Muhammad, a person who lived between the fourth and eighth century. He became 'famous' because he intervened in disputes between countries or regions.

He as he said himself heard the voice of an angel named Gabriel. Gabriel told him the text of his writing. The Koran.

This writing was according to witnesses in those times holy or must be kept pure.

Later people reading the koran said it was a truthful book. With rules how to live, how to give life, and how to manage a government.

Mohammed he is named these days. And these times also, they fight to save the purity of His name and his religion.

Islam, means submission. Submission to Allah. Some types of islam say he is the Almighty, Some types of islam say he is a chosen one by an Angel.

But most important of all, a True religion based on believe in the Almighty, will not choose to use violence or crimes to defend their religion or prophet.

Task and Servitude

The religion most radiating and splendid.

A religion only found by them loving the truth, by loving the peace.

May that religion named by its subject.

The Allmighty, Omnipotent, The Omni.

Pray to Him and get goodness.

Pray to Him and get inner peace.

Pray to Him, learn about life.

Choose for servitude.

Choose to be His servant.

Ask Him to make you a citizen in his Kingdom.

Ask Him to judge your life.

Job by task

Every human, as an individual has a benefit for society.

Some serve society as doing their job.

They earn money with it.

They get their living by working a certain time during a period.

Sometimes your job has more openness to what you want yourself.

You can add by your own creativity.

As doing a task.

This task can be by changing a bit of your work,

To a goal more representative for a certain task.

For example if you are an artist, writer or painter.

you can be of value by using your creativity by adding meaning for a subject like a god, or a higher spirit.

Make some object worth your goal.

Make an impression of your own view on religion.

By doing this you can say you have a task for the Almighty.

Add value for longer times by adding meaning for a being which is known for longer time.

Good food

Food is the nr one cause of diseases and death.

If you eat or drink unhealthy you shorten your life, you feel more misery.

Food, Some people think food is not important as long as you live and do what you like you are happy.

But food is important.

Every dish entering your body gives energy for your daily tasks and living.

And every drink entering your body is giving you a good or bad feeling.

Food which is obviously bad is drugs like hard drugs, or soft drugs.

And also other drugs which is not named so like alcohol is bad.

Smoking cigarettes or other stuff is unhealthy.

Some people think sugar is a source of energy. But its a bad influence for your body.

So better not to eat or drink sugar.

If you are in need of sweet food, eat fruit or vegetables.

Meat form animals, or meat from fish are a good source of nutrients, but in these days those animals are not very treated well. So avoid eating meat.

If you want to live purely good,

Then only drink water (hot or cold)

Eat vegetarian.

And do some hours in a good nature spot (woods or other)

If you want to live happy, you have to choose.

What is going to make you happy.

The same as 70 percent of the world or the few that give attention to health and goodness.

May the humans thrive in goodness.

Sustaining earth

Earth as a planet has his own consciousness.
Ans with his power he warns us for bad living.
By earthquakes, disasters and all sorts of ways.

Earth is not very good in condition anymore.
All the underground sources of material we extract is wounding our
earth.
Earth is responding but not with happy messages.

If we want to treat or earth good. We have to choose to fulfill earths
message for us.
Treating earth good. With giving her a good condition.

Some people say only reserves are enough, but others more educated
in this subject say we have to change a lot in or life.

Maybe a good invest in time and means will give change to such a
thing as health of our planet.

Fight against drugs

Drugs, the number one temptation. Humans get sick by it,
They long for it when they are addicted to it.

A cure for it. Some say by getting off it cold turkey,
others are in a hospital program.

A cure for it is:

As some religions say.

When you are content with it, surrender to Jesus Christ, Krsna,
Allah, or the Almighty.

It will surely help you with your addiction

(help others by helping yourself)

Relations

Relations, many men are longing for relations.
Some look or search for goodlooking people.
Some look for friendly people.

Some people love but cannot express it.

Relations.

When you want the right one.

The one which is like a second half.

then you have to ask a god or a lord for a favor.

For example ask Jesus, Krsna, Allah or the Allmighty.

And then wait for things happen in your life.

No one can say how long it takes, or in what way your prayer gets fulfilled.

freedom of Speech

Speech and expression of thoughts, feelings, inspiration.

Every human in countries with a decent law have the right to utter them.

If we talk to others,

If we write about things to others,

If we sing or show messages.

In decent countries people are protected and have the freedom to say or express themselves in every way that is not harmful.

If we insult others. others as humans, as organisation, as countries, regions, religions, cultures.

We have no right for protection.

The border for communication is the moral, ethical, spiritual wounding of others.

If we give commands to kill, to hurt, to wound.

That is a crime, because every human may live.

If we say of religions that they suck, are evil, are lame or other comments,

We have to be aware that others could or would say or express the same about our religion or culture.

The same is with expressing a meaning against countries or regions.

In some countries it is even forbidden.

For example if we would publicly insult a member of the royals, or of the government.

They would very fast ask you to not do that, or they would stop you by force.

So if with insulting royals or government such consequences arise, why wouldn't it be applicably also to religion.

Not with our religion and not by being biased only for the rich or famous.

(my own opinion: if you hurt others with your freedom of speech, let the judges of the country speak to you)

reaching Heaven

Everyone has a view on how heaven is and would be.

Heaven, some are meant to reach it, some are damned and will go to the opposite.

Heaven. When you live good in your life. Then you will earn your ticket.

When you do bad in your life, you will not get a ticket.

My view is:

If democracy rules a country,

If a company is led by a council.

Then:

Heaven is like the balance between those who love you and would allow you to go to heaven

and those that do not love you and would forbid you to go to heaven.

So if four persons love you and wish you could go to heaven, and two persons do not love you. Then the balance is positive.

Maybe it is even more complicated. With percentages etc.

But if you want to go to heaven, then help a lot of people, do good things, and put effort in good living.

May heaven is reached by a democratic council after your death counting all good and bad things.

May the good ones reach Heaven,

May the bad ones learn goodness.

Goodness

What is goodness,

Everyone has a different belief on that subject.

Some say it is good to help sick and poor people.

some say it is good to make profits with your company,

some say it is good to get children and raise them to adulthood.

Some say it is good to follow your dreams or heart.

Some say, and so many beliefs there are as persons.

Goodness on moral value it is following the law.

A law in which the rights of humans in a certain country or region are written down.

A law in which it is valued what people may do in relation to other people.

A law in which people get the possibilities to manage there life.

Choose one, discard another.

Goodness in Ethical value.

Is a balance between values of society which are not always written down,

Sometimes we learn them in our youth from parents and examples.

Sometime people get angry or criticize us when we break those rules.

Ethical values are about who to safe, who to hate.

Ethical values are, is it legal to do this, or that.

Goodness as a social rule.

Social rules are more or less dependent on what the government imports in their values.

When social rules are implemented, there is attention for problems as,

Being poor, without possibility of work (employment)

Being sick, not being able to work.

Being old, not healthy enough to work.

How to educate children or adults who want to learn.

And the last value is of safety for the citizens of a country.

How to protect against crimes and keep citizens safe.

Like sending criminals to jail (keeping them locked in so they do not
any harm anymore)

Goodness,

according to holy writings it is an intention, of healing and harmony.

according to holy writings it is defending an serving a higher power (a
not always visible power)

Goodness.

Leads to Harmony,

Harmony leads to peace.

Peace leads to Happiness.

Happiness leads to prosperity.

Prosperity leads to global awareness.

Cosmos

This cosmos has a form of reality.

It is by some scientist said that it is as a circle eating its tail,

It is said that it has wormholes, snares, particles of matter.

The cosmos, is in big scale the same as small scale.

So in the big there are planets, suns etc.

In small scale, atoms, particles.

The cosmos, it is said it has a balance that returns to stability.

If we would hurt the cosmos. Big powers would appear to bring it back to stability.

If the smaller objects we change, the bigger the effects can be.

If we fuse two atoms. a region as big as a lake can be caused to be a danger zone.

If we fuse two planets. (not in our current possibility) than it would give two stars or suns as a result.

Cosmos, is living, is intelligent, is awareness.

Cosmos, is wisdom in patterns from big to small.

May the cosmos help us finding our purpose.

May the cosmos help us not going extinct.

May the cosmos learn us her secrets.

Angels v Aliens

Angels,

In old times, they were widely known.

They saved and helped people.

Especially righteous or religious people.

Angels,

They gave us the messages by which we were guided.

They gave means to give good people the way they wanted to live.

But they were not always present.

Sometimes people pray and are in panick. without help, without safety.

Angels, today when they would appear, scientists and atheists would think they are aliens.

We would i it would be possible, bring them to a certain area to investigate what kind of living beings they are.

Then Aliens.

They are in our movies mostly living beings with untameble thirst for violence.

Not being intelligent at all.

they would murder, harm and do all kinds of things to make us suffer.

Aliens,

Higher evolved humans, would choose to live according moral, ethical and social rules.

They would feel empathy, and feel altruism.

they would have better ways of giving society a form in which every being would be happy, and do what they are good in.

Aliens.

We don't see them. Do they exist.

If we turn down the scale.

If we see a little intelligent creature. We try to understand its ways, its patterns, its feelings.

For example swans or monkeys. swans are beautiful. We make photo's of them. Which we use to give beauty a place in our world.

Monkeys, an intelligent creature. We investigate our own consciousness by learning and understanding its ways.

So would aliens bigger than us, more intelligent than us do the same with us?

Make the world a better place.

Make empathy a goal of society.

Society and capitalism

In our world, the most rich countries or states are in capitalistic hands.

Some people, very rich, own more than three quarters of the wealth of the world.

But the other side of the coin is, as long as it is in hands of the banks, or governments, it is spende twice its value.

The rich see it as a number on their account, and the banks use the mirror value to give out loans and savings accounts.

But if the super rich would deduct all their money, this world would be in serious danger.

In short time all property would be turned over to the state(houses, cars etc.)

If we want to help society be based on a non negative money value, we have to change our system.

Not any longer a twice value of money, but one value. If money is in hands of the banks, it is not spende at things it never will be worth.

Savings will not be multiplied for loans.

And accounts will not be bound to a certain percentage of giving or spending it again.

May money be a value based on real property, real valued material. Be it housing, gold or other.

If you as a citizen want surety about your money, then give call to the banks and ask. Is money based on a real value, or just a number being multiplied by the bank.

If money is based on unreal value, it will sooner or later fall in price and value.

A guilder will be worth a ten times of value.

An Euro will be worth nothing but a dime.

And a dollar will be worth as one want to buy at any rate. If their is not any real worth coupled with it.

what worth is it.

Choose you wealth. A number on a bank account,
real property,

Rare materials like gold, platina, silver, or gems.

Choose your wealth, a number for giving your loans.

Your loan on housing, is it worth buying it.

Your loan on cars, is it worth the percentage of interest?

communism

A while ago, a couple of decades there was a style of government.
started by a couple of genius.

They called it communism. A government based on equality.
based on simple by difficult hypothesis.

Money didn't exist in a capitalistic version.

Everyone got the same salary,
All companies were owned by government.
All goods and things were priced by a central government.

It wasn't the best kind of government, because some people used the
system to get illegally wealth.

If everyone get the same salary it is not anymore important what the
top income is,
if some one gets nothing at all.

The drawback is that a percentage of the population don't want to
work at all. And without a instrument of salary control they cannot
be forced to work.

Another drawback was that culture and religion was not very
welcome in those systems of government.

Communism in ideality would be; everyone equal income, everyone
share responsibility for instruments, sources etc.

And a forgotten value in their time was religion.
If religion was added to communism it would have been more
popular than capitalism these days.

Communism is not about who wants what, but about who is able to do that.

Communism is not about who is doing that, but about who can do that.

Communsim is not about what is there to use, but about what do we need to use that.

Education

An important subject.

Who does want to learn,

Who doesn't want to be the inferior person.

Who wants to get knowledge of reality.

Education. Learning is the best way of giving people the idea that they are important, that what they do matters.

Education. If one learns, he or she is content and doesn't give problems.

If education is reachable for everyone, at costs not too high, than society will get prosperity.

If education is on all levels reachable, society get wealth.

Education, from low levels as primary school to university, gives a goal for everyone.

It is good for the masses to learn.

Education is a value in society not to be forgotten. Not to be used for bad intents.

Propaganda is easily made harmless by giving people education.

Dictatorship is easily made harmless by making citizens wise and smart.

Education. Be wise, Learn to get good jobs and salary.

crimes

Criminality, the worst enemy of civilisation.

Nothing helps preventing.

Nothing cures it for eternity.

Nothing to prevent victims for being wounded.

Or?

If criminals learn to meditate, reflect their feelings. Learn to feel, instead of act.

The crimes are more prevented. Because the impulses, thoughts of crimes are seen, and felt.

Then the criminal learns that thoughts are not true. If they are about violent theme's

If criminals learn to meditate, what would stop them from giving value to their life.

Meditating is not acting with violence.

Meditating is not escalating reasons for crimes.

Meditation gives way to feelings. feelings of what others did to you.

feelings about what you are doing.

feelings of hatred and anger.

By feeling it, you learn to explain the feelings to others.

And by explaining you get more peace in your life.

And if you talk about your feelings others can respond and give you advice.

value society

Society,

What gives a good society.

Are people happy,

Are people working,

Are people procreating,

Society, if you follow your heart, do you have a good life. or is it all lost.

Society,

Give way to let people do as they desire, within bounds.

Give way to let people avoid what they hate or are afraid of.

Society,

Let people help you if you need help,

Let people help you, if you need help without you knowing it.

Society has a value.

Dictatorship is valued negative if there are innocent or victims without reason.

Democracy is value negative if the population is not choosing or giving the choices a side.

If society is bad, nobody is happy, people get killed or wounded without cause.

If society is bad, noone gets educated.

If society is bad, their are not many children.

If society is bad, religion is forbidden.

If society is bad, culture is forbidden.

If society matters, choose your leaders with wisdom.

If society matters, choose the right instruments to lead the country.

If society matters, give people permission for creating family.

If society matters, educate children.

If society matters, give borders for crime.

If society matters, reward good deeds and good intentions.

If society matters, choose a government based on the choices of the population.

If society matters, allow change and chances.

Society a good choice for them who want peace in their life.

tradition

Tradition,

Choose the history of your family.

Choose the sayings of old people.

Choose what is commonly known as wisdom.

Tradition,

From reasons to act to effects of choices.

Tradition,

Old people know what was common in old times.

Old people know solutions to problems, existing also in the past.

Tradition,

Wisdom, is a source of goodness, and a cause for peace.

Tradition,

May the wise be heard,

May children be happy, and allowed to play.

Tradition,

Give border for damage and violence.

Tradition.

A word being good.

truth and lies

Truth is what is true,

Lies are what is said not have happened or what is not analogues with reality.

True, is what people see as existing or as being valued by people.

Some laws say that true is what three witnesses say is true.

If lies are not existing, there is cause for pace.

If truth is not existing, there is deceit, treachery, corruption.

If people want truth in their lives.

truth about what is influencing them.

Truth about what chances they have for happiness.

Truth about who they are.

If people want to lie about their actions and living,

If people want to lie about their offspring,

about work and society,

What is reality worth, if all lies where said without meaning.

Lies are a cause for stagnation of growth.

Lies are a cause for criminality.

Lies are a cause for downfall.

Lies. Choose to counter them with truth.

Lies. Choose to use them to heal lies.

Lies. Do not follow lies if you are not getting benefit from it.

Truth. number one value in life.

Learn your children to follow truth and use lies only for avoiding violence.

Learn your offspring to use truth to grow and for evolution.

Learn your offspring only to use lies in war.

gold and silver

Materials, raw ore, or raw in form.

It is not worth as much as refined material.

Choose to use silver as value for money.

Choose to use gold, for large savings.

The only problem is storing without chance for thieves to steal it from you.

Choose to use silver to pay all your goods and needs.

Choose to use gold, to give a downfall to current day capitalism.

Because gold in your property cannot be used anymore for giving it a mirrorvalue of giving out loans.

Gold is a new value to old truths.

Silver is a new value to old truths.

If you say you own a golden treasure, people are drawn to ideas of getting it to own.

So if you spread message of owning wealth, it is a temptation for people.

Gold stored, silver stored gives a value without inflation.

It is not used for giving false value.

Use it to counter the banking system, capitalism.

happiness

Happiness, everyone desires it, everyone has it as a goal.

But what defines happiness.

Some search for it by fame,

Some search for wealth,

Some search for it by success,

Some search for it by spirituality.

Some search for it by acceptance.

Happiness,

A goal in your thoughts,

Happiness,

A feeling in your body,

Happiness,

A purpose to life.

Happiness,

in your body as a feeling by eating, acting healthy.

Eating wholesome foods.

Acting, with good moral and ethical intentions.

Not using drugs, alcohol, cigarettes.

And all kind of values in that sphere.

Happiness in your thoughts,

Reaching goals.

Reaching the fulfillments of your ideas which are most important for you.

Happiness as a purpose for life.

Gives a lifetime of effort and experience.

Happiness. As many meanings it has, as many people following their reason or intuition.

Happiness.

Create Happiness for others,
and get the satisfaction of being at value for others.

Happiness.

Find in altruism a tool to give way to goodness in society, and also in you.

future

The future is unknown to mankind.

the future is predicted by cryptic statements.

From old times where the bible has got its form with revelation and other told stories.

From tradition passed on from father to son, and from mother to daughter.

Future, has been covered in details by all our science fiction writers.

Future, thought in all kinds of forms by the important people governing us.

Future, May we get peace, May we get harmony,

May calmness be in our hearts, May friendliness be in our thoughts.

May the civilisation be healthy and good.

Future,

We have learnt from the past that war is devastating values as virtue and goodness.

We have learnt all our growth and welfare are destroyed by war.

Future,

We have a choice, a choice we make to make our future a good one, by taking responsibility for what we do now, what we do today.

Future,

Is it a war, spreading all over the world,

Is it peace, for thousands of years,

Is it reality, unfolding and giving its characteristics.

Is it our government choosing to give us peace.

Is it terrorism giving their rules and making statements by violence.

Future,

As it is unknown, it can change fully, or change not at all.

As it is unknown, we are not afraid of futures giving torture or badness.

As it is unknown, We live at peace untill we get in danger.

Future as the weather being predicted two or three days ahead, so intelligent ones can analyse and predict future.

We as mankind have not many tools to analyze future,

But as we use computers, if it would exist, intelligent life forms could use computers to predict future, or avoid dangers.

If we choose to live peacefully, we enlarge the chance that peace will be in our homes.

Future, We care.

Peace

Peace,

In your youth you get peace by sharing your experiences with your parents.

All your problems come to rest if you reflect them and ask your parents for advice.

All what hampers your mind, your feelings are being diminished in sharing them with your parents.

So every subject, you experience, in relation to others, in relation to what happens to you, can be brought to rest by talking about those subjects to your parents, (grandparents also)

If you are child or grown up without having relations yet, or behaviour which is part of relationship, you can turn for problems to your parents.

If you have a relationship, (i do not exactly know) you have to turn to your relation-partner with your experiences.

(i myself experienced every subject on experience you share with your parents give extra peace in your mind or feelings.)

(if you have parents who are open to that kind of coaching.)

virtues

the need for virtues in society is formed by knowledge of harmony and the opposite danger.

Virtues, we all can name a couple.

Virtues, some value it a high place, others say its not of any worth.

Virtues, if you act with virtue, others not always can understand.

Virtues, in religion it has a name and a place.

In one religion it is valued high to act with peace and goodness, in other religions they say you have to defend with violence.

Some spiritual ways you have to be honest and honor the old good people.

Some spiritual ways say you you have to use the biggest effort to get rich.

But what is virtue really.

the way they say its placed in tradition,

The way parents learn their children,

The things that are forbidden in law, thus acting without expressing crimes.

Virtue,

Peace, Chastity, being helpfull, valor, a good measure, altruism, justice, friendliness.

Virtue,

Choose to follow the values of virtue.

Choose to be an example.

Choose to give harmony to reality by following virtues.

Virtues,

Search your life long for goodness. goodness being the core virtue.

Search you life long, to learn your offspring and children the value
you found to be true.

Virtue.

What is Virtue,

is virtue of good use for society.

Virtue in religion does it serve a good purpose.

Virtue in society, does it add value to welfare.

Virtues, name all of them, and tell others how good they are.

But give way to experiencing them and feeling the truth of it.

natural resources

In our reality,
On our planet,
In society,

We make use of all things that can give profit.
We make use of all resources, being natural or artificial to gain profit.

Natural resources,
We use them, for basic needs, and luxury needs.
We don't think of what our future brings when we get the backlash of what we do.

Trees are cut down,
Oil is being harvested,
Gold, diamonds, rare ore are being exploited.

We use the planet, but how long can we continue our habits.
We have profit as the main value in our monetary-system.

We use all things, for our own needs of money and richness.

Natural resources, we may exploit them, without borders.
And deserve the future we get.

Be a good man and use your future to live the here and now.
Natural resources. an value we are not valueing unless we feel the results of our choices.

The indians of a couple of centuries ago said, in your life don't leave footsteps that cannot be healed.

Every step you make, value if footsteps are permanent, bad, or good.

So choose your steps with wisdom. Leaving no traces that can't be healed.

So choose your steps with conscience of the future, leaving your children a world without hunger for natural resources.

May our future possess enough to make our next generations be blessed with enough natural resources.

Future resources.

giving peace to history

Our peace, is formed by what we preserve.

We as human kind have history of both good and bad things.

Our good things, are all inventions be it personal or community.

Our bad things are all damages done to health and world.

In the past,

We left other races without justice in bad shape.

Name the indians in america. We killed them, made them to outcasts.

Name the gypsies being persecuted by all civilised people.

Name the jews in war being chased.

Name individuals having other opinion than normal people.

If we want to give harmony to our world.

Do not only think of helping screaming people.

But also of the ones who were not able to scream, or are forgotten.

Give indians, land and means to live in their favored ways.

give gypsies, way to education and shelter for basic needs, so they don't have to be vagrants.

Give the jews, safety and their possessions.

Give those individual outcasts peace and ability to live.

(in the past a lot more were in bad situation, this is only an example of a little few)

illusion

illusion, is part of our life.

We look at televisions and computers. And take all experiences serious.

We look at movies, and listen to music.

It forms our character, memories.

We let ourselves being influenced.

When we see an advertising and go to stores to buy what gives our status or profit.

Illusion,

Is formed by our mind, we think things and sooner or later we take it as reality and act according to its influence on us.

The mind projects, not only by subject and theme of our thoughts, but also

the style of impression. What kind of colors we see, what kind of scenery is used.

We let us being influenced.

Some religions name the mind the source of illusion.

Some spiritual trends say it is the source of evil.

Some people teach us, let go off the mind, stop using it.

There are monasteries, centers for practising letting go your mind.

Choosing to follow reality, radical accepting it, using intuition for acting.

When fully being someone experiencing reality, you have pre's and don'ts you will only see then.

in religion there are stories about this subject.
Being it someone who dreams of his kingdom, and in reality forgets
to work and earn a living.
Being it someone thinking of using violence to raising his meaning
and forgetting to allow peace in his surroundings.
Being it a life you not live in reality but in your daydreams.

Choose to experience reality, as much as possible.
It gives you peace of mind,
peace in your life.
endure pain and misery, it slowly changes to a good life.
(not a promise of me, but something promised by religion)

Buddhism told the same,
being present in reality gives calmness and goodness.
Giving treatment to the source of suffering. (destroying the source of
it, the mind)

May the wise, prosper,
May the present, get welfare,
May we get peace.

cure and care

most diseases are being cured,

They have a medicine removing the illness.

Diseases being treated successfully are not anymore cause of suffering.

They are not anymore inflicting pain or misery.

But there are diseases being cause of misery and pain not being able to be cured.

No medicine to relief the patient.

May our society find a medicine for all diseases.

May our society lessen pain and lessen misery.

Some diseases are caused by our way of living.

Taking drugs or other bad stuff.

When we suffer we want, if pain or suffering is high, a cure and we are not withheld by costs or effort to diminish the pain and suffering.

May we as civilisation care for all that suffer and are in pain. Not countin the costs or profit we gain by it.

May we as society keep an eye on all diseases and discover effective treatments.

May we as people help those in pain and those in misery.

May we help for curing the bad side of society.

invention

We as society are thriving when everyone is happy,
when everyone has a fulfilling goal.
When we take care of our children, raising them to adulthood.
When we take care of our sick family. being it temporary or
permanent.

Inventions serves our civilisation.
We have a lot of benefit from them.
Being it a car with wheels, to having computers counting what we
need and preparing it.

Inventions, discoveries. May we have them as healthy changes.
Inventions, discoveries. May we avoid danger with them.

May it have a good role in our world.
Not giving way to (mass)destruction, or (mass)violence.

We need as society our health to invent good things, the same
we need work for use and spending our living.

Inventions and discoveries. May they be helpfull, so we hope.
May they help our retrieval of peace.
May they add goodness to our life.

if we are invented, or discovered, May we not suffer from the results.

Eye on you

An eye on you.

If superpowers do exist,
Do they see everything we do.
Do they see everything we think.

Would they judge us.
Would they punish or bless us.
Would they act to safe society.
Would they misuse to gain.

May the superpowers if they exist,
Tell us their reasons,
Tell us their interests.

May those superpowers proof to us their reasons, their acts.
May those superpowers, tell us of their heroic deeds.
May those superpowers help us living and creating intelligence.

Why do we exist,
Why do we act,
Why is our reason different than other beings.

May superpowers,
act in accordance with their greatness,
To the good and usefull of society.

May superpowers choose to have harmonious and healthy intentions.
May they not hate,
May they not manipulate,

May they not only act for their own gain,
May they not use violence,
May they not inflict pain, unless it is a border for more violence and
danger.

May superpower,
Be aware of our
needs, our desires, if we are in their influence or sight.

May we be blessed by the Almighty,
If we act according to the rules of goodness.

dictator

Dictator,
source of mischief,
Source of evil,
Source of mass-infliction of pain.
Source of mass misery.

They act for their sole happiness, or their sole profit.

We are as human kind, responsible for all humans belonging to our world.

If we choose to serve a couple of persons,
we give them our consent of defining what we do or don't.

Dictators,
We cannot always fight them, because we are weak, or not able to.
May time overcome every dictator.
May our deeds and prayers help the total of our mankind.

May our friends and allies help us fight dictatorship.
May we prevent the gain of a few at cost of many.

Dictators, May they change their heart to serve their country.
Dictators, May they change their opinion about ruling, about governing.

Let us as mankind serve and lead with consent of all our habitants.
Let us as mankind make a fist to prevent dictators getting to rule, or being the most important person.

peace of hearth

Our peace is caused by us following our hearth.
The feeling something is important.
The feeling something needs our attention.
The feeling we matter if we do something.

Our peace of hearth,
a source of empathy,
a source of altruism,

Our peace of hearth,
Being aware of reality,
Being aware of what we lack.

May we serve society.
May we do what good is for us,
May we do what good is for society,
May we do what good is for all of living consciousness.

What we do, matters,
What we do, changes everything,
Be it a small or big change.
Be it a good or bad change.

What we do,
May be counted as our steps.
Steps from youth to old age.
Steps from parent to child,
Steps from peace and harmony, to we hope peace and harmony.

May our steps lead to the good.

May our steps be visible, and give our peace.

May our steps, give warm feelings to others.

time

Time is a moment long,
a moment in which we live from zero to old age.
a moment flowing from water to water.
a moment flowing from history to future.

Time is as a snake, biting its tail.
Being from birth to life's end.

Time is as a predator, eating all of our thoughts and feelings.
Time is as a predator, exhausting our life.

Time is as a friend destroying pain and suffer by new time.
Time is as a friend, giving us opportunity for reason and peace.
Time is as a friend, giving us dreams and fulfillment.
Time is as a friend, flowing from past to future.

Time if we pray to it, it gives us time.
Time if we put our purpose to it, it shares purpose with us.

Time. As giving gold to effects.
Time. As demanding our best intents.
Time. if we follow it from the past to the future; we learn to act according to its rules.

Time. one day in a period of eternity.
Time. One life in a period of centuries.
Time. We count it hour by hour, second by second, and time by time.

Time, it is valued by the people giving benefit to it.

Time, it is hated by them getting full of pain and misery by it.

Time, it proves our intents with reality.

Time, we give peace, we get peace in return. If we act according to the real blessing of it.

a past secret

In the past, a couple of sages lived. They gave our society peace and harmony.

One of their valued secrets shared with all of us was:

If we are rich,

If we have income more than our basic needs provide,

If we are famous,

Share it with the poor in society.

Share it with those not being cared for,

Share with the ones suffering.

Because what you give them, is attention, is goodness.

Because what you give them is source of their thankfulness.

And it not only i benefit for the near future,

but also the source of you good afterlife.

Building palaces by investing money in poor people.

Building towers of diamonds by giving without need for return to poor and sick people.

Because they cannot repay you.

Because they repay you by being present in your afterlife as the ones saying, he was good to us.

May he be good in afterlife.

Society, is a border to good and bad ones.

good ones get rewarded, either in life, or afterlife.

Society is a meaning,
Sharing lives with lives.
Sharing needs by needs.

May the ones choosing to be rich in reward,
choose by sharing with those in need, not able to satisfy their own.

May the rich share.
May the poor be blessed by the rich.

May you care for your afterlife.

(one person understood this secret, some name him Jesus.)

future beliefs

The future holds our reasons.

The future, gives our peace.

Its our goal in the future to experience the blessing of the fruits of work and tasks.

Its our future, it matters to all of us.

The only future we have is a good one.

In our dreams and thoughts.

We work for safety, money, satisfaction.

If we work, we create

If we work, we benefit, we hope.

Our future beliefs, its a shipwreck if we get bad results.

We suffer if our dreams are not coming true.

We belief in a good future.

May it be soon, or far.

We hope on a good life, be it now, be it in the future.

All our dreams of the past. What value had they. What value do they give us.

Our beliefs, when we get old, change to more realistic ones.

Our beliefs, when we get old, change.

Not always to our peace.

Not always to our harmony.

May we listen to old ones,
May we listen to the voice of reality.
May we listen to all good voices we notice.

May we care for our world.
May we hear all cries for help and victim of bad.

Society of goodness

A society, has its norms, laws, values.

A society, have a couple of tasks everyone has to do.

Living, means, fullfilling tasks to maintain your health, your living.

From eating, washing to other needs.

If you choose to reject to fullfill those basical needs, you
get an appearance not being liked by others.

In society, you have the choice to act with good intents, or bad
intents.

The full of all our intents, create our society.

If we have a society of all bad persons.

We are divided. War and Terror are in our midst.

If we would have a good society.

We would care for all inhabitants. being limited or fully healthy.

In good society,

Pain and misery is being compensated by care or cure with enough
means to be to satisfaction.

In good society,

inhabitants are not unhappy with richness or fame of other
inhabitants.

In good society,

The total value of happiness, of total population, is
being on the positive scale.

The individual suffering is not bigger as the individual blessing of others.

May every one be in peace with each other.

May every one not envy others.

May every one has the same chances for welfare and happiness.

May our society turn to the good light of harmony.

richness

The rich are unhappy with their richness.
They buy all kinds of nice things,
But it doesn't give happiness.

They do all kinds of pleasure,
But they are not truly happy.

They work for their money, or live on money of others.
They do and live but not for their pursuit.

May the rich, discover the ways to peace and satisfaction.

May the rich find their true task.
The task of being of value for others.
The task of being good without conditions.

If they choose for pleasure, may they constrain themselves. for their
happiness lies in limiting their pleasure.

Limit to pleasure is as limiting the disease of the mammon.

Richness. As of use for others, As giving the radiance to the
surrounding,

May it create warmth.

May it create consent.

Criminality

May Criminality, not make us hate each other.

May Criminality, not make us deceive others.

May Criminality, not make others sick or wounded.

May we not kill,

May we not damage,

May we live with mutual consent of society.

The criminals, if they want to get happy.

If they will get happiness in their lives.

They should act with empathy.

They should do all their acts with empathy.

For in refusing to do evil things, lies their happiness.

May all criminals discover the gem of empathy. may they be little criminals or big criminals.

May they discover how to heal instead of hurt,

May they discover how to give, instead of steal.

May they discover how to defend instead of attack.

May they discover how to act lawfully instead of unlawfull.

normal people

If you feel like a normal citizen of your country or region,
You might be aware that in life you have periods of misery or
misfortune.

For you as a normal person,
having work, having activities.

For you as a normal person,
adding value to society, or acting according to values of others.

If you are not fully happy with your life,
If you are experiencing something missing in your life.

Choose to give part of your possessions to charitable goals.
Choose to use your income, a part of it, for charity.
For in the normal world happiness lies in supporting charity.

Get happy, share charity.

respect

Respect for Old people.
Learn from them the old values,
Learn from them the traditions,
Learn from them, the things we ought to care for,
Learn from them what is effective in reality.
Learn from them what gives inner and outer peace.

May they be honored by all,
May they be asked for guidance,
May they give a way to society for the benefit of all.

May our old people learn young children how to behave in a proper way.
May our protection be based in guiding our children by the effort of old people.

May the old people, say to us their experiences, which gave them wisdom and health.
May the old people, share their beliefs, their discoveries, their knowledge.

May we give our old people the feeling they have done good, that they matter for us, for society.
May we allow them in our words to go to heaven. To promise heaven to everyone being good or helpfull of our total peace.

May the old people, share their dreams with the young people. To not forget the dreams which were usefull.

May we believe in goodness,
As being part of reality.
As being part of society,
As being part of our life.

dealing with the bad.

Dealing with the bad,
Associating with de devil and other demons.

All of our humans, are neither good nor bad.
But we are good or bad according to what we do.
We are good, if we are aiding the good of society.
We are bad when we do harm, kill, steal, do damage to others, or to society.

Bad persons, sometimes say serving the demons.
Bad persons, sometimes have signs by which they show to associate with demons.

May bad persons, reflect on their feelings and thoughts.
Associating with demons, means beside using their name in your communication,
That you allow violence, hatred, damage, damnation to be part of your life.

Those demons, not only is a name, but a dangerous power is the source of it.

Those demons, kill, harm, are violent, destroy and deceive.

If you say demons like the devil and satan are normal powers, you lie, or you are misguided.

Turn away from those evil powers. Do not serve, not even in a joke or a saying.

Turn away, because they do no good to you.

If you associate with those demons, you could get mentally ill, or be faced with misfortune in your life.

Do not even do those things in your dreams.

If you have been doing evil things,

Try better your life by praying to the Almighty.

He can save you.

I hope all people acting with demons may be sooner or later saved by the Almighty.

If someone you know associate with demons, pray for him or her.

Not only once, keep praying for him or her.

IF he or she is disapprover your prayers or effort of saving her or him, pray and not bother him or her with the fact you pray for him or her.

angel or demon

Angels, according to religion they are servants of the Lord of heaven, name him God.

Angels, they have no free will, but follow the commands of God.

Angels, they can do no evil, cannot cooperate with bad powers.

Angels. May they be the blessing of earth.

Angels. May they be the blessing for all living creatures as well as creatures of other form.

Angels, May we in distress remember the angels. or the Lord himself.

Angels, May we in our desires honor them.

There is no evil in the Lord of Heaven,

There is no evil, part of goodness in its totality.

If we are in danger, we may call the lord, angels, or saints.

But best of all, we pray to The Allmighty.

Angels become angels by surrendering to the Lord of heaven

Angels become angels by giving their free will to God.

Angels, we hope they live, they exist, they help us.

We hope they help us in our bad times.

Angels, according to religion, one converted human is laudable.

My own opinion is that every being giving his life, his soul to the Allmighty or God,

becomes an angel. (as being a representative of good deeds and good life)

May every one wanting to of good use, surrender to God, or the Allmighty.

(God as being described in the bible, hinduistic writings etc.)

Demons. don't want to be one, they are not favored by many if their intents come in daylight.

the Past

The Past,

If i did damage, may the Almighty help me heal it.

If i disrespected anyone, may the Almighty help me respect them.

If i killed beings, either animals or humans, May i be able to heal and mend it.

If i did evil, May it be repaid by good deeds.

The Past,

If i hated anyone, Let me love or feel friendly towards them.

If i hurt feelings or soul, may i help to recover.

Allmighty,

Help me heal,

Help me change to being a good person.

Help me heal my bad side.

Allmighty,

I want to be of worth for reality.

I want to not any longer cooperate with forces serving death or evil.

Allmighty,

Help me heal,

Help me recover,

Help me change.

Mirror

If we are a mirror for each other,
We would reflect to them, feelings like love, friendliness, anger and
hatred.
We would reflect acts of healing, violence.

But if we would be a source of light, we would give light to their dark
part.
We would give warmth to their pain and suffer.
We would lighten their intents with erasing their shadows.

What if we would give awareness as a mirror.
We would show pain and grief on their bad side.
And we would show, happiness and love if they act with their good
side.

We all have awareness, But we have to grant it to reality.

May we all respect awareness.
May we all let us be guided by awareness.
May it be a pillar of our civilisation.

Awareness, consciousness. Observation and acting in reality.

Give awareness to others as a gift of friendship.
Give awareness to society as an act of goodness.
Give awareness to reality as acts of presence.

body and soul

We are hearing in all kinds of situation that we would be soul,
and not be part of life. Not be part of body.

We would be more or less a being in our mind. Not having part in
the
sphere called body.

We would be living longer than the body.
For eternity.

So as some say.

But if you get hit by someone or by accident. Who is feeling the
pain.

If you eat, who is feeling satisfaction.

If you sleep, who is sleeping.

Your body is part of reality.

It is better to care for your body, because when you don't or forget
you feel the misery of your body.

Feeling pain if you don't eat or drink for longer than normal

Feeling pain when you get wounded.

Feeling grief when someone fights you with words.

If you take a medicine against pain, who is experiencing the pain
going away.

You are feeling all those bodily feelings.

May you when experiencing that fact, choose to live with conscience.
Not making jokes with your life, Not disregarding advice and feelings.

So as we feel our body while living,
So we can conclude all living beings feel emotions.
Emotions more or less the same as us.
Some living beings can't talk our language,
does that mean they don't have emotions,
does that mean they don't have consciousness.

Emotions are felt by all living beings, beings with blood and able to move.

We all feel our bodily feelings, it doesn't change if we would not be able to explain or say it.

Emotions, do they stop after life.
A question everyone asks him or herself once in life. (or more often)
A question not regarding our own life alone, also the life of other humans, other living beings.

If you take medicines against depression or psychosis, does it affect only your body. No it changes also the way you feel, you act in reality.

May we acknowledge that we all are living beings with consciousness, with awareness.

May we respect the feelings of other human beings, all living beings.

If we hurt or wound a human, we get convicted by law that it is not a good act.

If we hurt or wound other living beings. We do not always have a law to be a border to it.

Are all living beings experiencing pain and emotions as we do?
Some say they do, some say they don't.

If life forms are congruent with our life form. They should feel it the same way as we.

animals, gifted with breath, hunger, pain just like us, in inner feelings may be not recognized, but as outer acts, name it instinct or intuition, the same.

If we notice their emotions being a little bit or more of us the same. we then have to respect their lives to.

It gives us responsibility over all beings gifted with consciousness.

Your soul is based in your body.

Your mind is a sphere which counters most of intuition.

Your Spirit is bound to the life of your body.

Some say spirits live on after life,
but not in your body.

So treat your body with respect, and live as if its your ticket to eternity.

If your soul is bound to reality in the body,
you may conclude other souls are bound the same way.

Therefore do to others, as you would against yourself.

If you treat yourself with good intent, choose to treat others with the same intent.

If you recognize feelings in your consciousness, trace it back to

feelings others would have in you would act good or bad towards them.

(soul is not a word standing alone, or meaning an object alone)

Bronze Line

Bastiaan Oostendorp

protection

May we protect the weak,

May we protect the poor,

May we protect those living by good rules,

May we protect those who want harmony and goodness,

May we defend our children,

May we defend our grandparents,

May we defend our source of goodness,

May we defend our ways of truth,

May we work together for prosperity and welfare.

choice of life

Humans have all free will.

Some choose to live satisfying their desires.

Some are planning their life.

Some do as religious persons the best to help their gods.

Some do without knowledge what they want.

If you are tired of your free will.

Or if you distrust your thoughts.

You can choose to surrender to god.

You can give your life to god.

May we be blessed by god.

Sentinel of peace

Every human can be a force limiting the bad, helping the good.
A sentinel is working for the Almighty to create a harmonious
sphere on
our planet.

We all benefit from such persons.
They not always are publicly known for their work.
Some act in silence and peace.
Some act as soldiers fighting bad forces.

May sentinels defend our planet.
May the peace of all races come forth from their effort.

Mindcontrol

In these times we have movies like the Xmen about mindcontrol, telepathy etc.

Who the mindcontrollers are we don't know.

And as long as we are not very important we will not have to be worried for it.

But mindcontrol does exist.

And what they can do:

Change your memory.

Change your character or personality.

Change some of your behavioural patterns.

Mindcontrol,

You can learn it by training nlp and doing masterclasses in some countries.

But most mindcontrollers who are able, are in jobs at international intelligence services.

May the good be helped by them who can.

May the controll lay in the hands of those who want.

Mindcontrol.

If someone changes suddenly and do counterclockwise his own daily things.

You then know. an influence not very common is acting in its life.

You cannot heal such a one, not by force not by reason.

You have to hope the mindcontrollers heal their wounds.

May freedom of life within law boundaries be a choice for everyone.
May freedom of thought not be manipulated by some able to influence it.

illuminati

A lot of people say that the illuminati is a sect, and has bad intents.

They would be family of more.–

They would be very rich and even influence governments and royals.

The word illuminati means, as far as i can see, the enlightened ones.

In that definition it would be everyone that is enlightened that would belong to that group.

The word enlightenment is as said by some spiritual ones the awareness of reality,
and the discarding of the mind.

If the real illuminati would exist, they wouldn't egoistic or selfish.

They wouldn't own a lot of houses, a lot of expensive things.

They wouldn't influence others in a bad way.

Bad intents, would not exist.

their intents would be to help everyone who has no happiness.

Friendliness, charity.

Helping those that are cast out.

Helping those that are disabled.

Helping to give prosperity to all living beings.

Giving attention without predilection.

safeguarding technology

In our time we have a lot of technology to aid us in well-doing.
All those inventions make us feel good. a warm house, a way to
prepare food,
a way of transportation. And all kinds of additions to life.

We should be aware that a major disaster could give us a setback in
time.

So best thing to safe our world,
is by writing down all inventions, the way they were invented,
how it can be invented again.

What advantage it has, what disadvantage it has.

All those inventions- described together, can be saved in a conserved
place.

To be kept for hundreds of years.

(a good thing is to also describe language. different symbols,
definition etc.)

storage of books

In these times we have plenty of books to read,
plenty of all kinds of subjects.

All books would take 5000 human lives to read all of them.
Books about information on certain subjects.
Books with romance and fiction.

In the past a large library of alexandria was burnt down because of
unrest of people.

We in the future will face such a period. Expecially if money will
cause debt by government and
impopular choices.

We should save our heritage of information.

Because movies, music and the like take much effort and space to
preserve we have to skip them.

But books as being text, if we would store them in plain text on a
computerinformation disc will take a minimum of size.

So the best thing is,

Convert all books to plain text. drop out the pictures. and store them
for example on a cd, harddisk, memory card.

And store those information devices in a safe place. Ready to be
conserved for a long time.

(in the past they did the same with the scrolls of the dead see, nag
hammad writings)

May our future have a good eye on our humanity.

dna time capsule

Every human on earth has a different dna fingerprint.

Some may differ in skin color, hair or eye color.

We all have a fingerprint, on our fingers. different from other people.

But in the future it will be the dna that proves if you are normal or different.

DNA, in the future they will investigate and analyze these times. and will as we do archeology the same with our remnants.

To be in advance, save your dna in a condition that it will be kept safe for centuries.

You can put your dna in a time capsule, and store it in the soil.

You can think of other ways to.

The more dna samples we store, the more view they will have for our society in the future.

Don't be afraid they will follow rules of morality.

They won't do inhumane things with it.

You don't have to freeze your body or part of it. Just save your dna.

And dna can be some of your skin, or a little drip of blood.

May our future lie in our hands.

shortage time investment

In the future we all will experience a time of shortage or hardship.
In those times, normal money is not worth anything.
Values items in that time will be food and objects ready to be used,
even without electricity or water supply.

If you want to save your real value,
consider changing your savings account to pieces of silver or gold.
If you do so, be aware that criminals could notice your treasure.
And put it in pieces ready to be paid with,
so don't buy kilograms of silver, but buy pieces with a good value
also possible to buy normal stuff.

Capitalism & Communism

Capitalism encourages people to earn money and spend it on things they like.

With capitalism the danger is that some accumulate much money, or they guard their income by rules and laws.

Communism, without corruption is

Everything is from everyone.

Everything is owned by everyone.

And giving each member a basic income.

income enough to have a good living.

if countries choose for communism, they should be aware that a couple of disadvantage appear.

Such as secret groups giving themselves more oppurtunities for owning and living.

And inhabitants who realise they get money anyway wouldn't work anymore.

liberal & social

The top of government is dividable in two.

One in which the government nurtures as a mother every inhabitant.

The other is giving freedom to her inhabitants.

Social is giving members access to shelter & food for free.

Liberal is forcing members to earn their own money.

Liberal, if you put it in extreme, no police would be there.

No education, no healthcare.

All those things would cost the buyer an enormous amount of money.

With pure liberalism there would be in two years anarchy.

Giving the richest or strongest the power to subdue whom they like.

Social.

is with empathy the basis of every good and harmonious country.

May socialism get more voters.

old times

Old times,
do we trust writings based on information thousands years old?
Hinduistic writings give a view on their technology.

flying ships,
humans with partly animals (Ganesha fe.)

All kinds of technology, from nuclear weapons (Sankarshana)
to laser guided weapons.

Some of the old ones had knowledge even on medicines giving lifes
hundreds of years extra.

In those times they were all destroyed by the big war, kuruksheta.
After that war, all things decayed and went back to non visible
source.

They promised the offspring safety when they wouldn't turn to the
same technology.
After that time, human mankind turned back to the use of stones and
sticks.
And since that time we have the writings giving us experience of what
they were.

In upanishads we read the core of their religion.
Asking the Lord to govern our lives.
Asking the Lord to give guidance and advice on the subject we think
are important.

Hopefully we will in the future live our lives with his Blessing.

Old times. they perish in war, they prosper in devotion.

profood

Healthy fruit and vegetables from nature.

Some heal, some hurt.

As food you need vitamins, proteins and kolydrates.
calories and stuff.

A profood is lemon.
a second profood is ginger.
fruit is healthy.
vegetables are healthy.

Other profood.

Magic

Magic is the science of making things visible.
You can use magic to let food or objects appear.
You can use magic to influence someone's thoughts.
you can use magic to cause miracles.

Magic,
some use spells or mantra's to create them.
some use higher powers to ask them to create for you.

Magic,
White would be good,
Black would be evil,

Magic,
Green comes from nature,
blue from air or water,
brown from earth or ground.

Magic,
Noone searching for goodness takes the means of magic.
Noone willing to be of good value for society chooses for magic.

Magic,
Leave it be,
Turn to a religion.

Religion serving truth and harmony.

words backward

In some languages there is a hidden meaning in words.

so we have the english words.

Live, Lived.

if you turn them backwards you have.

Evil, en Devil.

In this way you can form a lot more words meaning something good
or something bad.

Tree of good and evil

In the origin of jewish religion there was a concept.
Paradise, where humans lived a worry-free life.
and had all to be happy.

Then a snake invited the human adam to eat from a certain tree.
To be alike the gods.

He ate from it, including his wife, and went hiding himself.
then the jewish god said, now he is one of us, let us cast them out of
paradise.

That tree of good and evil. is in my opinion the human mind.
We can think of things good and evil and get knowledge.
We hide ourselves in the masks we create y thinking.

The other tree in paradise, the tree of life.
That tree in my opinion is surrendering to god.
(as is said in proverbs by Salomo)

So choosing to use the mind gives you worries.
Choosing the tree of Life, surrendering to God is giving you a good
life(as some writings say)

preference

All objects that can be bought have certain division.

You have very expensive things, with high status value.

And the opposite, very cheap things, with low status value.

they share a couple of characteristics, both expensive and cheap.

For example a tablet computer, you can buy one for 600 euro's or dollars,

But there is one far more cheaper with having the same experience of using it as the other one.

Shoes, you can buy them for thousands of dollars, but they step the same as one of 50 dollars.

You maybe have to search for it.

So when you are poor, don't waste your money on expensive things.

So when you are rich, you do better to investigate your options.

Free to have

What in this world is free to get, or free to have.

We all feel good if we experience happiness.

We all want to experience happiness.

But what gives us that feeling,

when we reach goals,

When we are satisfied.

What is free is not always giving us happiness.

For example if a certain food would be free.

It is not per se healthy.

If all things in life would be free,

some people choose the same things, while others choose other things.

If nothing would be free in life.

There would be a lot off suffering and misery.

Not everyone has ability to work for money.

What is free;

Mostly sun light is free,

Mostly clean or dirty water is free,

Mostly a place to walk or sit is free.

If basic needs satisfaction would be free,

More people are happy,

Less criminality,

More educated people (they don't have to make effort for the most

basic needs)

More people sharing tradition and culture.

What is free:

Being a soldier in a country is free.

Being a slave for others was free.

Being an elderly person, should be free.

May all the good things in life be free.

May all the bad deeds be accumulated, analyzed and forbidden.

hierarchy of gods

A subdivision of gods.

May the Almighty be known as the Highest, most Resplendent Lord.

May a step below Him be the highest Power .

May as Gods be known, the powers described in the holy writings.

Being the christian gods, the father, son and holy spirit.

Being the hinduistic gods, Brahma, Vishnu, Shiva.

Being other gods with their will.

If you search for a mighty one to serve.

Consider your choice and don't make that decision lightly.

Devotion

Devotion is giving your life to the Almighty,

Devotion is asking the Almighty to give a judgement on your life.

Devotion is offering yourself as a servant to the Almighty.

Devotion is beginning the day with laying your day in the hands of the Almighty and asking Him what you may do that day,

Devotion is beginning a task or doing certain things with asking the advice, influence and guidance of the Almighty,

Devotion is in danger and pain asking the Almighty his help.

Devotion is asking the Almighty to give you a task or plight.

Devotion is trusting he exists,

Devotion is waiting for his answer,

Devotion is bringing forth fruits of prayer.

Devotion.

A holy task for a good time.

intuitive movies

When movie directors create their movies,
and actors are playing in scenes,
there are a couple of goals.

one is to make profit and be famous with your movie.
Another is to give vision to certain theme's or behaviour of
individuals or groups.
another is to give view to problems, little or large.

And an important goal can be,
to have everyone who sees the movie a certain feeling, or experience.
By studying psychology you can learn what happenings in movies or
reality get a certain result.

You can use that instrument to, for example, give criminals insight
on good citizenship,
or give them an insight in what criminality causes in victims or
people.

You can use that instrument to let children have a view on certain
jobs or education.

You can use it to change certain concerns in society.

And a lot more is possible.

Movies can be used for purposes adding value to society,
or can be used to deform society, or damage it.

Movies can be used to instruct or train individuals,
Or to hurt them.

government watchers

Each country has a certain government,
Some have dictators, Some have kings or queens,
Some have presidents, Some have a council of elders.

All kinds of leadership are possible.
But not all of them serve the goodness or welfare of their country or
state.

To have attention to that kind of expertise, a new group of jobs is to
be introduced.

They are chosen by the global leadership of the world,
and they are unbiased.

They judge all governments of the world.
judging them on certain subjects.

subjects like:

- Leading as democracy or dictatorship.
- Giving opportunity to ambition.
- Minimal salary.
- Attainable healthcare.
- Basic education.
- Corruption.

And many more subjects that are applicable to government.
The global alliance has the right to judge countries and dismiss
governments.

measure of education

If our civilisation is more and more internationally based.
The need for equal education is needed.

For example a nurse in this country should have the same study as a nurse in other countries.

For example a scientist should have the same study as in other countries.

Primary school,
High school,
And so on.

The next step is giving that education the same possibilities in third world countries.

To enable people of poor countries to study the same courses.

It would give benefit to all of us. Because more experts will enter the employment.

(only the language would be different)

Children

Since eternity existed, humans are procreating.

Giving offspring their knowledge and giving them a basis to live.

One big rule is, more attention to your children, gives them more harmony in their character and personality.

Attention, not in a bad way, gives goodness as a virtue to them.

All attention you give them, learns them to communicate about their problems and their experiences.

Children.

If you choose to get them,

then be aware you give them nurture and attention.

To let them be of value for society and you.

Unconditional love means you take their problems and questions seriously.

Unconditional love means you wish the best future for them.

It means letting them have part in their life. enabling them to make their own choices,

and learn from the benefit or mistakes resulting it.

indians

In the medieval times, in another continent there was a good and big civilisation.

Not built on capitalism, or money based exchange.

They lived and called it service for the group.

A group was mainly the individuals with the same language or skin color.

They had prosperity because they all understood the value of responsibility for the whole of the group.

They were aware of the things they did, in relation to each other, in relation to the earth.

They said, all indians, being deceased are part of nature.

The spirits of those ancestors were in the air, in the water, in the earth.

They were aware every creature they killed for food or clothing was part of that world.

One wise sentence was;

Don't leave footsteps on the earth damaging her.

When you are in your last days, give your experience to the young generation.

When you are looking back on your life.

Did you add value to earth and its inhabitants,
or did you destroy value.

purpose of technology

Since the beginning of this world, our planet earth, or even before that,
if we existed far before earth.

We always experienced feelings of pain, misery, hunger.
And those feelings were the cause of desiring ways to cope with those challenges.

Those feelings caused in intelligent humans, or creatures the need for inventing answers to unhappiness.

for example the wheel, stone tools etc.

In these times we have the same desire for inventing tools and things to get more happy.

The purpose of technology is not profit, or luxury.

The purpose of technology is giving every member of mankind basic happiness.

And the word happiness is defined by each individual in a different way.

May our purpose as humans lay in the happiness of us all.

purpose of military

Every decent country in these times have a military power.

they train and exercise to be strong soldiers.

They have to defend and attack according to the plans of the leaders.

A better purpose in times of peace is

using the soldiers to bring food (bread, grain) and water to countries in famine or decay.

And the soldiers can be appointed to build cheap housing for the real poor.

If every country in peace would cooperate in this plan,

A lot more people would be happy.

Country Defence

Countries in these times have an army. Military to defend and attack.

The best way of military is,
a global system of defense.

Every state or country being member of it is in times of war defended by that global force.

If a country being member would attack another country being also member,

The global force only defends the countries.

Not being a partner in attacking.

The rule is the global military force only defends.

And only defends members of the global group.

If other countries not being member are attacked, no defense is given.

All countries on our world may apply for membership and may not be rejected without good reason.

It is a global defense allied group.

If countries in the world are attacked by one of the members, there is no supply of military for the attack.

The group only acts in defense. Not in offense.

By this organisation, countries get more budget for other things.

They don't have to spend much on military (because it is globally spend for military)

They can spend the money on other topics as they like.

(if a member attacks another member, only defense is given to the victim of the attack)

sunlight

Every human needs sunlight.

To feel warmness, to feel comfort.

We should use sunlight as a source of energy.

We as we proceed in using electricity should turn to better energy sources.

For example if the oil in the earth runs out, and is dried up,

We can use sunlight as a energysource.

Putting in the desert big regions with solar panels.

And a electricity cable to certain points.

Maybe even big cars with big batteries, bringing it to the countries in need.

it would give benefit to all those poor countries.

technology

Everyone on this planet, should have access to food, shelter, tradition.

All people inventing technology might have the goal of supporting such an idea.

Not having as the goals superior warfare, but superior welfare.

When citizens in a country are poor, or seriously ill, they are being looked at as inferior.

They are pushed to the margins of society.

If poor people of other countries would have the ability to be happy they could have a good influence.

Technology to give poor and ill people a living ought to be free of costs.

All technology which heals earth, or heals human mankind should also be free of costs.

And the payment of those technology inventions can be fame or the name of the inventor given to that invention.

international organisation

Big enterprises have local dependences all over the world.

Such as electronics suppliers.

name a few.

They make their products cheap in countries with low costs.

And they ship or transport it to countries with people rich enough to buy it.

International welfare, it should be a part of this world.

Especially with the things we buy or create.

One international organisation would be a benefit for this world.

Giving people all over the world opportunity to have a job.

A job which challenges their intelligence, and with the outcome of goods available for all, and with the benefit for society.

For example someone in africa, helps in a factory to construct pans or dishes, or helps in a factory creating roofs.

They help constructing those things, and

they receive a reward according to the scale appropriate for that country.

Everyone in the world should be able to apply for such a job.

And everyone in that organisation would earn the same salary.

And all the products would be cheap enough to be bought by anyone.

The organisation would have employees all over the world.

Giving them houses, a basic income etc.

The idealistic goal of it is to support all who want a job, and all that want to cooperate to diminish poverty.

property

We all are humans living on this planet.

We all own certain objects, or other subjects.

If you as a human have objects like art, television or computers.

You have to keep them safe.

If you have art which is worth a lot,
you have to defend your home or that art.

But besides objects like art or technology people with a relationship
own or are bound to their partner.

And maybe children too.

Then you have to defend your partner and children.

When a economic downfall appears you are worried how can i
support my family.

All choices in life have their benefit and their drawback.

If you have a relationship, you have to keep it safe and good.

If you have children, you have to educate and nourish them.

All that effort and attention is then required by them.

If you want a relationship and children, then its not anymore possible
to

spend your time and attention to a life realising a certain goal.

goals like inventing technology,

goals like devoting to a god,

goals like being sober,

all kinds of goals.

some people see their partner of children as property.
You have to defend them and deal with them.

Disaster preparation

In the future there will be disaster.

What form it has, is unknown, but it will happen.

The date on which it will happen is not yet known.

For preparation you can best have some food and water in your house.

When it will be happening the government will need three days to reach every house.

Be smart, spend some money for preparation.

Superior

Some are better,
Some are more rich,
Some are stronger or smarter,

It is the human who is sometimes better, superior or inferior.

This value is for humans the biggest influence to act or do.

If you are rich you can buy pleasure,
from objects to property.

If you are strong, you are known for your strength.

If you are smart you can have the highest jobs in society.

All these characteristics are not of value for the sensitive people.

It is a characteristic of comparison.

And comparison is a function of the mind.

So all things we see on our planet, and the way humans act.

It all is a result of us using our mind.

Hierarchy, a mind thing.

War and Terror, a mind thing.

If you would be in war, and not have your mind, you would be stopped hurting others as soon as you felt sympathy with your victims.

equal distribution

Every human on this planet, can have food and shelter with pleasant experience.

If everyone would be vegetarian, more than mankind has enough food.

If the super rich would give their money to satisfy every human, we all would have housing, basic fulfilment of needs. and acces to books.

If we all would share the same rich and possibilites, all old and sick people would be abe behave.

If all countries cut off their defense budget every human could exist without unhappiness.

We all van benefit from such choices be made.

Every government can bring in such subjects. Sooner or Later citizens take over such ideas and a good an happy country is born.

Equality isn't the fact that everyone is the same, but the fact that everyone has access to the same possibilities.

If life would be free, everyone would be rich.

If life would be free, everyone would strive for happiness at no costs.

We as human mankind have to choose for happiness attainable for all.

visible vision

As we see in our world,
we have televisions and computers.
They have characteristics of how our inner life works.

Our mind is as a television showing what we want it to show.
The mind is as a computer retrieving ours commands and showing
response to it.

The mind is connected to a imagined super intelligent source.
That intelligent source, defines what thoughts we receive.
It defines the style of colors the thoughts are,
which subjects are composed to the either radio play or movies.

If we choose a certain subject or theme, the gigantic computer is
computing the result as so we wish to see or hear.

The mind is expressing itself in our world,
by the discoveries of television and computer.

What will our future be?
spectacles by which we are not anymore able to tell what is illusion
and projected in our eyes, or what is an experience in real life.

What will future be,
everyone connected to a computer and projection in our eyes.

Or will our age of computer use end with a disaster.

For sure you can notice that the mind is far more intelligent as we
are.

We do not even recognize its plans or patterns it uses.

The mind of one person, is invisible connected to the minds of all humans.

And is it a border to mankind, maybe it includes much more.

We not even are able to imagine every part of it.

We see in our thoughts what the mind wants us to see.

For the use of its own benefit.

Technology

In the past we made use of materials like rock, earth etc.

In advance of our technology we used raw materials to create robots, computers, machinery.

In the future we will step from using minerals for machines to living tissue, being artificially designed.

From microchips of silicium to computers made from sugar-moleculebased advancements.

And every step in technology is rising to next level.

From minerals to simulated plantlife, to simulated breathing animals.

Making computers beyond our imagination or comprehension.

Making machinery not any more dependent on electronics or energy of electrons.

But also based on water, later oxygen and energy of sugar based material.

The benefit of plantbased or animalbased technology is the greater ability to calculate choices.

And being far better in changing algoritms to rules of patterns prediction.

Intelligent robotics

In our future it may not be clear what role robotics will have.

In books of science fiction they say robots can replace humans.

in other books robots have a very bad role, making war to the human race.

May robotics be part of a peace program,
defending the poor, the sick, the innocent.

May robotics be a tool to heal our planet.
May robotics help the disabled people.

May artificial intelligence have the border of pain as a no go.
May artificial intelligence do what we can't.

Robotics, as we now have chips of transistors, there will be future
means to
enhance robotics. enhance intelligence of machinery.

Is there a test to judge the damage or contribution of the semi
intelligent device.

As Isaac Asimov told in his books, a threefold law, a creative brain by
positrons.

May we invent and discover for our welfare.

Good hearth

Everyone with a good heart,
Is known because of friendliness,
Effects of harmony.

A good heart is,
Helping those in emergency.
Valuing their own life. not doing anything risking health or life.

A good heart is,
Doing good work as employment not cooperating with goals of war
or damage.

A good heart,
May they as lights shine in our reality, giving everyone the surity of a
stable and safe time.

A good heart,
May they be found in future times and get respect.

A good heart,
Is as wanted to invent tools of peace, both material and as pattern or
algorithm.

The big war

In our history we learnt there is no decade or century without conflict.

In our history we promised, not any more such a mass torture or fight in which civilians die or suffer on large scale.

As countries or regions invent weapons, to as they say defend their country it is a fact that as effect of one weapon is larger than only warcriminals are hit, we are as citizen in danger.

Weapons, inflict pain.

Weapons, inflict economic downfall.

Weapons, create enemies, not named before.

Weapons, inventing them gives profit for the few.

Weapons, gives social groups benefits because of their power.

The big war. No one knows when it will be., will happen.

But einstein said, how third worldwar is fought is unsure but the fourth is with stones and sticks.

As our world evolutes it gets more intents of peace. Which will hopefully prevent war.

As normal people we are not aware of the dangers of the future. but the multi rich people, can predict what near future will give.

As they say, they pull the strings. As the string is pulled we do as was taught to us.

As the strings move, we think we are ourselves cause of what

happens. Because we identify with decisions made by government of important people

May the big war not hurt or wound good people. giving them a safe refuge.

May they keep sources of food and shelter during that hard times.

Money science

In our world, today there is money.

money is worth a genuine amount or value of goods.

Money is used to exchange means necessary to live.

Quality multiplied by quantity gives the price its worth.

When money is no longer needed for society, we will exchange and will be happy with whats available.

Money, the few posses the large.

Money, a dime's worth is enough to change reality.

Money, a dollar is enough to feed 30 poor people in 3th world countries.

Money, spend it, the economy rises.

Money, save it, inflation falls.

Money, spend it, loans are given out for higher interest.

Money, save it, it's used by others in mirror value.

We as society need money to compare what we own, to estimate our salaries in comparison with what we produced.

Money, may it be gold, may it be salt. Value is what we agreed with all parties involving it.

Monks of awareness

In the future some ways of behaving as humans are not very easy.
giving pain and suffering.

In the times ahead of us, we need people using their consciousness to
heal and harmonize earth, and the planet we are on.

They choose to grant their awareness to reality, without benefit for
themselves.

As they choose they can do simple work, with no intellect needed.
When they get more advanced and more intuitive gifted they can do
more highclassed work.

These monks change the vibes of earth. Making harmony as a source
of peace and welfare.

These monks get paid by charity or gifts.

As everyone knows such people are needed they give and help them
living.

monks of nutrition

In the future when war has destroyed earth.

There is food needed for the survivors.

Because money has no real advantage to our existence we can choose
for volunteering as workers.

harvesting food from our land,
processing it to eatable object.

Monks of nutrition,

As a noble task of providing for food.

They work as volunteers and give all donations to the organisation,
which gives every member a equal share.

They process and harvest food, and give to those who need it.

Not making distinction between features and expression.

monks of construction

When earth is in decay, a new opportunity is needed.

To heal and recover all buildings, places, nature, there are workmen needed.

It is a noble task to repair all damage done by war or conflict.

It is a noble task, when money is rare to work as volunteer.

The monks of construction,

Rebuilding houses, reconstructing roads and bridges.

Creations factories for food and supplies.

These volunteers get paid for what they get as charity.

Charity given to the whole organisation and shared with all volunteers.

The organisation, gives food and shelter to the workers, and educate them to be

fully functional as technicians.

May by their effort, society be healed and repaired.

May the Allmighty bless us.

Blue Line

door Bastiaan Oostendorp

Angels influence

As religions depict. Angels give us messages of peace, harmony and welfare.

Angels, all kinds of forms.

From babies with wings, to man with sword of justice.

Names from Gabriel to Michael.

And from Uriel to Raphael.

Angels, if we pray to the Allmighty,
they would turn to our safety or support.

An Angel is found,
by the ones with justice as their ideal.

An Angel is found,
by the ones with compassion as their goal.

An Angel is found,
With the peacekeepers, little or big.

May an Angel guide thy on the path of goodness.

May an Angel guide thy on a path leading to heaven.

May an Angel guide thy for good influence on earth.

Angel's wisdom is eternal.

Angel's choice is forever.

Angel's chance is persistent.

May Angels fly and bring us peace.

May Angels fly and let harmony rest in our society.

May Angels fly and give the law of empathy and compassion to our world.

May Angels fly, and keep us in the good direction.

May Angels fly, and make themselves known with radiance.

its not to late to pray,

its never to late to ask the Allmighty a judgement.

Its never to late to surrender to the Allmighty.

nuclear war

We all fear war.

We all fear war if it would demolish earth.

We hope if there comes war we will survive.

But a chance for nuclear war, is a destiny no one survives.

A chance of death, is possible when the leaders of this world make a bad choice.

A lot of goodness comes from erasing nuclear weapons.

But we can say that to our leaders, but it will not be the solution for the whole of us.

Because not every leader will do the same.

Nuclear war. Hopefully we survive.

Nuclear war. We can stop it by putting the leaders to consent by a citizensconvent.

Coordination of basic needings.

All humans have similar needs.

Some have luxury because they live in rich or wealthy countries.
Some have no food or shelter because of lack of government or good laws.

There should be a group of chosen people.

giving shape to a internationally group giving access for all of human species to have food and shelter.

food not being the three star food of restaurants but bread, vegetables, beans. and water and maybe tea.

These chosen people do the counting and financial side of what cost it has to give every human access to food and shelter.

and forcing wealthy countries to pay for it.

Its an organisation not yet existing. but would be an extra task of the United Nations.

Except that countries being pover or low ordered have the access to the reigning council too.

robotics

Three laws to govern all.
Three algorithms to move them all.
Three observers to give consciousness to all.
Three laws of which Isaac Asimov wrote.
One law to defend society,
One law to obey their masters,
One law to defend themselves.
Three algorithms to move them all.
One algorithm of artificial intelligence by silica shape.
One algorithm of artificial movement by electric circuits.
One algorithm of artificial coordination by sensor technology.
Three observers,
One being a omnidirectional camera.
One being a web of nerves through the system.
One being a web of tissue holding it internally.
These are the known parts of a robot.
These are useable by the technology of today.
These are limited in use and possibility.
But the future holds promises we not know.
But the future holds technology not yet predicted.
But the future is dreamt of in movies.
One future is the extinction of human species.
One future is paradise because of robotics doing difficult things.
One future is aiding human life by robots looking like us.
May the past learn us what future holds.
What has been, will be, what is going to be, has already been in the past.
Robotics.
No human may be enslaved by robots.
No human may be slaughtered by robots.

Because all humans are equivalent in value.
If robots would kill, damage and destroy for only a few people
who give the orders.
What use is the social society worth.
No human may rule over others by giving robots the autocracy.
No human may rule over others by owning the robotics who
produced food and other basics.
May robotics give the empathy to treat humans with goodness
and harmony.
May robotics give the compassion to heal the wounded,
support the lost, enable the disabled.
Robotics.
We know. they know us. They see us.

Intimacy

A life of intimacy. is being desired by all who have feelings of love towards other humans.

A life of intimacy. Is a wish every child has in its heart. when they grow up to adulthood, they learn what is needed for such a life.

Some children learn from their parents to behave friendly, or to behave polite.

Some children in their youth being not treated well use different behaviour to fulfill their needs.

They force others to do as they want.

Its a fact that friendliness is learned from friendly people.

Its a fact that peace is visible in society where peace is a purpose of many.

Intimacy. is learned by having goodhearted people explaining what is allowed, what is good to do.

Intimacy. is a need all humans have. But to give it, needs empathy. To give it needs the skill how to be friendly.

Intimacy is the interaction between them who love each other.

Intimacy is the love a father or mother has to their children.

Intimacy is the gratitude people have to their leaders, children to their grandparents.

Island of the blessed

In some greek myth there is a story about the country most blessed on earth.

That country would not be visible just by eyes or glass.

In that greek myth all heroes would appear there after their death on the battlefield.

In the greek myths there are gods and goddesses caring for all human beings.

The greek myth is about Zeus and Athena.

Zeus would be a superpower having a lightning by which he rules and gives enemies their worst end.

All greek myths are a bit corrupted by going from mouth to ear. They were not written down until the ability to write was common.

One greek myth said. The heroes saving countries, saving innocent humans would reach out to that island, not seen by those unworthy.

The island of the blessed. In medieval times people from europe, scandinavia and from Australia went on looking for that island.

But instead of finding that island they discovered dry land on the other side of the globe.

The island of the blessed kept being safe. The island kept hidden for those who had no good intents.

This island. Is being not a part of any war. Is not being a part of any injustice. Is not being any part of hierarchy of the rich, the famous, the powerfull and the lower ones.

May that island kept hidden for the heroes of these and future times.

In confront of that island, there is no abuse of intimacy, purpose of life, or peace.

There is one path leading to that island.
May it be discovered by the holy and faithfull ones.

bad intent

Bad intent,

Is when you want to harm living creatures. without caring for what they feel.

Is when you destroy and damage things used by others to live or create harmony.

Is when you hate and be a plague unto others.

Is when you damage of bring chaos in society.

Is when you disallow others to have peace or good life.

Bad intent,

Not always visible because it can be disguised by behaviour.

Bad intent,

May it be brought into daylight.

Giving society the possibility to heal it.

Bad intent,

Caused by many reasons.

Caused by much feelings.

But may the good intent win.

Firecrackers

The world is divided in regions.

Each region having some good characteristics,
and each region having some bad sides.

A region can be a country, a cultural region, region based on
language.

A region can also be described by common features.

Each region, if not feeling safe, discovers and builds weapons.
They force citizen into military. or choose to appoint the ones
who want to be a soldier.

Firecrackers.

When training soldiers use firecrackers. To avoid hurting their
own fellowsoldiers.

Firecrackers,

When you don't know, they scare the same as real weapons.

Firecrackers,

A lot of countries have firecrackers.

But not for making war, but for having a holiday.

Firecrackers.

Maybe in the future the fire is not in cracking. but the fire is
into mutual understanding and support.

May the firecrackers of war be used for peace.

Not peace defended by weapons. But by peace of giving food
and goods without benefit for yourself.

Firecrackers.

Train on military to use firecrackers.

Derisa

Derisa al kanlita mermi aslemeri ahn tenis kar meni melos ker
ohtenmi fer dosterni me lemerli der oster nami noli kanteri
meneri
of gerli kdat der meni gorde sarte mener ohlmen ver disterni
molem nimo fer doster nomen porter nemei aller kani aterni

Gene modification

Genes, are processed by geniuses.

Genes, the little things bounding our bodies to their shape.

Genes, the alphabet of proteins building our features.

Gene Hacking. We all fear that, if it would be possible.

Gene Hacking. We all hope we aren't the ones being submitted.

In Gene Hacking a couple of scientists make use of the total description of human dna.

They search for a weak spot. Make some little molecule-algorithm that changes in everyone taking the pill a feature of regenerating cells to dying without dividing into two.

Gene Hacking. An enemy not being attacked with bio-weaponry (gas or diseases) but by a pill changing genes.

Gene Creation. Creating new life forms. from the basis of known life forms.

But not anymore a good tool to support original life.

Gene Creation. Creating life. More usefull then iron tools.

Gene Recreation. Changing existing life to be able to survive hazardous life.

May Gene-Modification be controlled by an internationally governed foundation.

Day of Celebration

Day of Celebration.

We have all kinds of parties, throughout the year.

Some are compound by religious predecessors.

Some are ordered by political powers.

Some where discovered by good people.

A Celebration Day.

Three days in a year.

To celebrate our human race.

One day being Day of our Origin.

In which we think of how our race could become in existence.

One day being Day of our Protection.

In that day we look in our surroundings for people needing our protection.

The third day is a religious one.

We take a step and share our communication with people from other religions.

One day forgetting that they are enemies.

One day forgetting they don't deserve life.

Nature's purpose

The purpose of nature.

Some people say nature is dumb. not gifted with intelligence.

But if we look at our society, and the complete earth.

We see that little life forms work together to form big ones.

In our body, not all cells are caused by the living source of our body.

cells in our intestines care for digesting food.

The same way for fighting bacteria entering our bodies.

Not all cells or substances in our body are under control by our own cells. or structure of cells.

The purpose of nature.

We all only see our little perspective on life.

We see the body we have, what we daily do and we can dream or think of great things we want to experience or do.

All bodies, counted together are as a social creature. changing with each development in our human race.

For example when electricity became possible. We used it, and compared to technology its a structure of nerves,

communicating all things important for the best of the total creature.

And as in our body one cell has only knowledge of its own being an surrounding so is our human race in experience divided into each individual.

What are we as complete earth and all living beings on or in it.

What are we. We cannot understand the purpose of our own planet. our own race. or specie.

cibernetics

Ciberal extra functionality.

Cyber, spherical enhancement.

Functional computing ability.

A couple terms saying meaning to adding computer functionality to human body-form.

When we are a total of bodies. All mankind being the sum of all human beings.

Tell then the purpose of cybernetics.

If we are connected to machines. With mind or brains.

If we are connected to machines. With muscles or intestines.

What use are they.

What is their purpose.

Ciberal extra functionality.

Its being bound to computer.

Its being restricted in movements to what is allowed.

Spherical enhancement.

Is it a forcefield defending the close surroundings of the body.

Is it a machine, a forcefield giving muscles and limbs more power to move and act.

And last, extra computing ability. Its only of use when certain people are worth more than others.

Computing helps us being intelligent, having an high iq.

And that only one percent of the knowledge and things known and said about this subject.

In the future we will see all those things. and we all then say, oh its usefull and forget our complaints about it.

Only a couple or few of human kind will refuse cybernetics.

May those couple be defended by goodness.

Jewelry

Jewelry,

Ladies and Gentleman,

Like to be seen as beautiful, stylish, or proper.

What is beautiful, what is style, what is proper.

beautiful in eyes of ladies is the shine of jewelry.

beautiful in eyes of men is the shine of precious material.

beautiful is not the good intents of people, but the luxuriance attached to the body.

stylish, is the material most costly.

stylish, is the shape most difficult.

what is proper, when wisdom would not be visible.

what is proper, when wisdom does not exist.

what is proper, when goodness is not describable in wisdom.

Jewelry,

When every lady, every gentleman would sell it, and wear the beauty of modesty.

All human beings would have; food, shelter, culture and religion.

When every lady and gentlemen would loose their jewelry.

No war would be anymore on our planet. Because the root of war is desire for luxuriance.

When every lady and gentlemen would give away their shining objects.

The poor would not anymore complain and be content.

When all luxuriance was modified to tools, earth would give its abundance.

When all luxuriance was given to certain culture-keepers. All history is kept safe.

Symbols of heaven

Heaven,

Every human has an understanding of what belongs to heaven.

Some people think or say that heaven is for good persons.

Some people say heaven is boring, no pleasure is there.

Some people say, protect those children which are innocent.

Some people say, may religion be available for all to reach for heaven.

Heaven, Yellow or White.

Heaven, Blue or Gold.

Heaven, Silver or Diamond.

May heaven teach itself to all living beings.

May heaven be known unto all.

Some say religion is an indicator for men to learn about heaven.

Religion, would a symbol. a symbol to what cannot learn from itself what it is.

Symbols of heaven. All religions have part of it. the symbols are not in any religion complete or full.

Every religion has like a part of a key to heaven. If you study, and focus on it honestly you will understand the way it depicts.

But in the past there have been big deceptions. Not giving true meaning to religion.

In these days we have more access to the original writings of religions.

May the symbols of heaven be known to them searching or longing for it.

May the symbols of heaven not be despised and changed.

Symbols of nature

In Nature we find all kinds of creatures. From so little as a cell, to up to metres long.

And in the past there has been a lot creatures much bigger than the ones today.

In Nature we find also all kinds of social structures, from animals to humans.

Some insects have difficult ways of communicating.

Some animals have simple rules by which they live.

But Nature has its symbols. We as humans recognize and give a place in world literature and art.

Some are for example; the swan, the dove, and name them.

The swan would be a symbol of virtues, and self-controll.

The dove would be a symbol of peace, and of succesfull religion.

So there are a lot of symbols, of which only a few are known to us humans.

But as we see the symbols and give them a meaning or value,

So other species give meaning to things we not even see.

As to the swans. No one likes it when those symbols are used in war or for bad intents.

then humans have a natural feeling of defending what is good, what has good intents, or is important for goodness.

Silver

Silver,

a product of nature.

Giving glance to mirrors.

Giving shape to objects.

Silver,

A trading metal, not loosing value.

A trading object, not loosing purpose.

A trading material, derived from earth and production.

Silver,

Make it in use for all.

Make it in use for the goodness of society.

Silver,

They would be used to restrict criminals.

Silver,

Wise sayings get their light from this material.

Silver,

Trade it for goodness.

Trade it for purposes of social values.

Silver,

Make it to use of socialism.

Make it to use of communism.

Silver,

Jewelry for those at middle-class.

Jewelry for those of good intent.

Jewelry for those without fame or royalty.

When life isn't of any worth, trade it for silver.

When life isn't of any peace, buy peace with silver.

When life isn't of use, use silver to give it a purpose.

When life isn't good, trade silver for good acts of harmonious society.

Gold

A reason to fight for.

Regions and countries use it for giving reason to maintain borders.

A reason to spend for fulfilling wishes.

Regions and countries use it to hire armies and military.

Gold,

Only a few have access to it.

Gold,

When its given, wisdom is withdrawn.

When its available, its source of fame and royals.

Gold,

Everyone, feels its important to own.

Everyone, feels its a goal to reach out for.

Gold,

The value is in its possession.

The rich and high classed ones give it value for the ones not owning.

Gold,

May it be given to the poor, to keep safe.

May it be given to the poor, to have its true purpose.

Gold,

Shining with yellow to brown.

Shining with richness and fame.

Gold,

Once found, no one gives it away. or loses it with free will.

Gold,

If money isn't worth anything. Gold gets its value for trading goods and possessions.

Gold,

If silver would be not existing, gold would be the most important material on earth.

Gold,

If diamonds would not be existing, gold would be most precious in jewelry.

Gold,

If the earth would be upside down, only gold would be a exchange method.

Gold,

If the rich an royal loose existing, gold would loose its value.

Gold,

Don't make it your goal getting it, its coming with pain and unhappiness.

Food

Food, is important.

Food is giving the body a need to go on.

Food is satisfying the wishes for delicious taste.

Food is the way to go on living.

Food, is for some beings a bad future.

Food, is for some beings, a possibility to live.

Food, is for some beings, a way to grow fat.

Food, eat natural, eat with harmony, eat with peace.

Natural, don't change genes or atoms in the food.

harmony, by not hurting, wounding or killing for it.

with peace, by not making it cause of war.

Food,

Some eat with pleasure,

Some eat with pain,

Some eat and are unhappy.

Eating with pleasure is for the rich and royal.

Eating with pain is for the ones with heavy diseases.

Eating with not being happy is for the ones who have stolen
their food.

Food,

Share you meal with others.

Food,

Share your food with the hungry.

Food,

Share your food with the world.

Give food to the homeless.

Give food to the children.

Give food to the needing ones.

May food be the basis of a good life.

May food be the basis of a good social order.

May food be the basis for the riches of the earth.

May food be available for everyone and every creature.

May food gives us the feeling of satisfaction.

May food give long life and happiness.

projection power

Borders between realities are mostly invisible.

Invisible and not possible to pass.

Invisible by a projection power.

A kind of screen or wall is being protected.

And the force field stops people from going through.

But certain people, important ones can pass both the projection and the forcefield.

Those certain people are sometimes the watchers of our reality.

Sometimes they are important roles.

The projection stops persons from entering the wrong regions or blocks.

The force field, will be invented or discovered when they find its time for it.

Is this a science fiction theme. Maybe.

It should have a place in good movies.

A couple of movies already have this theme.

In the future there will be regions of living harmony. People with certain personalities. And other regions with people with unadapted personalities.

As i saw in a movie named insurgent.

some say there is a core of truth in everything that exists.

May our dreams, be worthy of existing.

May our dreams, tell the truth to us.

May our dreams, point toward justice.

May our dreams, fulfill our needs in reality.

May our dreams, give us harmony, enough to be able to bear reality.

Our dreams do matter,

Our dreams, dreamt at night. Give wisdom in our daylight.

synopsis

Synopsis.

A threefold sound.

A melody with three tones

Three sounds which gives the listener a certain feeling,
or causes a kind of reaction in the listener.

It would give a special gift to the listener.

A certain tone is called the solfeggio.

But that's between 500 and 600 Hz.

The threefold sound.

I don't know the pitch of the sounds.

cigarettes

use some smoking to get relieved.

Use some smoking to be cool and tough.

Use some smoking to end your misery.

Looser, if you don't smoke you are not our friend.

Looser, you are dumb because you don't smoke.

People have some reason to start.

In your youth its common, or it was common that teenagers smoked their sigarettes.

And after the first, the second was not far away.

And with all things giving a feeling, being sought for, it grows.

and one day you have a smoking habit.

Smoking, to stop they say to do it cold turkey.

From one moment to the next. not smoking but for example eating is the addiction.

Smoking some stop by using accpuncture.

Smoking some stop with chewing special gum.

Smoking habits end when the user doesn't value it with speciality anymore.

And the value vanishes when your health has been deprived.

The doctor tells, if you don;t stop you will die of cancer.

Then you have a reason to counter the good feeling of smoking with the baddest reason to continue.

stop smoking before you die.

stop smoking before you get to like it.

stop smoking its only costing money, and you gain no profit for it.

Smoking habits disappaear sometimes without trace.

Smoking habits sometimes are a feature of behaviour you want to express.

How is your reason to smoke.

What way do you walk with the smoking habit on your side.

Smoke the day.

Smoke me.

Smoking is not a nice habit for them who feel their body.

Smoking is not a nice habit for them feeling every cigaret entering their lungs.

coughing, a better experience is needed.

coughing, you have to see it as an investment in a tough life with smoking.

Smoking. What value is it that gives us the urge to continue.

Smoking. What use is it to stop, when continuing is the easiest task. Is it?

alcohol

its poison, legally produced and sold.

Its delicious because on its effects.

Alcohol, do not drink in your youth.

Your character and personality changes in a bad way.

You normal behaviour to eat at hunger, drink at thirst changes.

You will be influenced by alcohol and people drinking it, to be an answer to problems and suffering.

Alcohol, if you feel unhappy with your life.

You might ask the question, is alcohol the source of it.

Alcohol damages your life.

Your friends say your are rude or not nice.

Your family say you are not pleasant, and doesn't have eye for their experiences.

Alcohol.

Its legal, and its poison.

Drink much, you body takes much health away.

Drink much, money is the least of the problem.

Alcohol, stop it by drinking water instead.

Because alcohol is a counterexperience of water.

Everytime you want to drink a glass of alcohol, drink a glass of water.

Because, even without all the reasons to stop, its damaging a lot.

Because, when addicted to alcohol, its strange to feel sober.

Because, times without alcohol gives sharper intelligence, better health,

better social behaviour. and a lot of problems vanish.

dreams on drugs

We all use oxygen and food.

We all use shelter, action to live.

But some are vulnerable.

There is an object named drugs. Both soft and hard.

Its not a normal discovery.

Its not a natural answer to pain and suffering.

Invented by Military, it had a purpose of letting soldiers fight even when in pain or suffering.

But it had a drawback, the health was diminished and the memory got losses. So not usefull for military

The army put it on the market.

And guess what. We have a large number of addicts in this world.

Spending all their money, all their effort to fulfill the wish of taking drugs.

Dreams are not always positive.

Especially when the objects causing nice dreams wound your intelligence.

Dreams become nightmares when full of pain, suffering, hatred.

To get off drugs. We have to ask that military movement to open their files. and

help all of edicted worldmembers to be freed from it.

Drugs, an answer is not to start with it. to abstain at all costs.

And when on drugs you have to pray, send prayers to our lovely Lord to take us from that addiciton.

Drugs, a way of living noone wants yo experience. The daily craving. The daily problems. being accused to be a beggar, an addict, a looser.

In natural healthcare they would choose herbs to counter the effect. But the symbolic book of natural solutions with herbs is long ago forgotten.

That symbolic book, has to be rediscovered.
And only large organisations with almost scientific approach
could discover the medicine against drugs.
May we all be blessed by good health.

A kingly decision

In the far past, when animals were hunted for.

There was a kingdom. A society well run by the king.

He had grey hair and gave all citizens access to food and shelter.

People were happy and gave their profits to their king.

The king was ruling, and wanted to have offspring. To continue their country's government.

He got a male child. and at the age of five he was subject to a law.

Every child, offspring of a king, had to endure the lion test.

He was brought in a park, full with wild animals. from lions to leopards.

The child had to endure in the park for a couple of hours.

To show he had the courage of a royal child.

But the child had his wisdom and said,

it is of no use to do such a test, if it is not in real life.

Surviving lions not in a park, but when the country would be still full of wild animals.

The child refused the test.

The test would be easy because the scent of an enemy of the lion was appointed to the skin of the child.

The child refused. He was not to be king after his father.

The king, was in dismay. Because without offspring he would not have his future family on the throne.

The king chose to resign and the country became a governed democracy. Letting the wise and good people ruling the country.

The lion test, was long after this happening forgotten, but the democracy of wise and good people functioned. Long after people knew the names of these ancestors.

Atom based molecules

Atom based molecules.

A technology of the past.

A discovery of some scientists.

Atoms are little parts. one core, protons and neutrons.

In particle accelerators are new forms of molecules formed.

not based on atoms. but based on more little parts.

Names Quarks.

These quarks create a boud material. that is in source more different than atoms.

A molecule of quarks.

A new source for computing.

A new source for creating objects.

Do you have a car?

In the future it drives 2000 miles without fuel.

In the future its warm and comfortable without electricity.

Quarks, change the way our world is living.

Quarks, the surity of existence is a choice between possible universes.

Quarks, the security is a question the borders they place.

Quarks, if bad, its an end to reality. to our planet.

Quantum-mechanics. a choice to get propelled into a future unknown. unpredicted.

Quantum-mechanics. A future possibility. to discover. to protect. to use.

Contact with awareness

Awareness in your life.

Awareness in your sleep.

What value is derived from awareness.

You feel pain when wounded.

You feel happiness with friends.

Awareness between species.

Human to cat or dog.

Human to horse or cow.

Humans have the ability to understand that lower species have different feelings, or other types of consciousness.

Awareness is it a part of existence we share with all lifeforms.

Contact with awareness.

Be it on earth,

Be it in space,

What would you give as precious donation to other awareness gifted beings.

What would you give, as a token of friendship.

If you would be rich, and the other would be poor.

What would you give.

Gifts of peace and wisdom. Is highly regarded.

Gifts of harmony and friendship. Is a good gift.

If you would be poor and the other rich.

What would you give. Donation of energy, time, the ability to work. the ability to express good life.

If i was poor,

Did i got help.

If i was sick,

Did i got help.

If i was old and retarded,

Did i got help.

A simple poem from a rich man.

May the richness be shared with the poor.
May the health be used to support the sick and wounded.
May the power of youth be used to care for the old and retarded.
If an extraterrestrial specie, would contact us?
Would they judge with martial law?
Killing and wounding without cause without purpose.
Would they learn us to fish with a stick, harvest ground for grain.
Would they give us houses and factories.
Would they give transportation?
All those miracles of our civilisation.
Its not a normal gift to get happiness.
Its not a normal gift to get wishes fulfilled.
May an extraterrestrial, come with peace, come with friendship.
If we would be important; we would warn awareness for our martial behaviour against those who are 'different'
If we would be important; we would accept gifts and donations, and tell of others who dislike.
If we would be important; What would we do. when given much, when full of happiness.
As i speak.
May the Almighty bless them in return. for the gifts they gave us.
May the Almighty bless them, for their good intents.
May the Almighty. bless awareness. be it from earth or outside of earth.

Religion

Every religion has a source.

It can be a hero, a prophet, or a set of writings.

Religion is sourced by information being experienced as important.

For example if a call to a certain prophet would give immediate peace.

There would be a group choosing such a call.

But if that call would give you immediate peace but would give others you love immediate suffering

then the choice would be more difficult.

Religion, is a choice to follow good results of such source.
or to avoid using such source.

Religion, gives answers to our questions.

Religion, gives a difference between moral or social values.

Religion. For some its a gain, and for others a loss.

Religion, the normal human has feelings of not being perfect,
not knowing what to do,
questions if it would be allowed.

All kinds of feelings. and religion gives an answer to all that
questions or types of feelings.

If religion would be invented, it would cost a lot.

Because the copyright would be high (if one person would have
discovered it, and got licenses for it)

Because religion is not invented by a couple its free to use
religion.

Using religion, is prayer, virtues, moral behaviour, social
interaction.

Prediction is a part of some religions. they foretell what will
happen based on the authority of a religious model.

Religions. Some say its waste of energy.

Some say its the best choice they ever made.

Religions, are created by the successors of the role model. when the role model is resting.

Religions. Keep yourself safe by choosing according to normal countries law (if laws are democratically chosen)

What if religion is created by a ghost, powerfull, bigger than us. but more evil than us.

Religion is a choice of what we believe of a certain set of beliefs. (be it based on a person or writing)

If the religion you follow gives you suffering, or wounds or damage. The would it be still a moral good religion? or socially good?

Choose with care what you believe or follow.

In past times all religions deprived. Will yours too?

When religion serves a purpose it grows and gains surity.

When religion serves a purpose, more and more humans choose it.

What need has a religion without a purpose.

What need has a religion damaging society.

If people are in emergency, of lifehealth, of social position, in famine or war.

They mostly go search for ways to cope with it, or solve the hardship.

This we can see in religions of Christianity or Hinduism.

This we can see even in primitive cultures. They create their own system of answers to problems.

If you are in emergency, is it usefull to buy your solution when stores are not available anymore.

If you are in emergency, do you change from morally bad to morally good. to be allowed to heaven.

If you are wise, choose to follow the good sources of religion when the emergency is not there, when you still have a choice to experience the goodness of religion.

Wise men, always follow laws of social interaction.
Social interaction is based on moral, ethical behaviour. and source of virtues.
Social interaction is in society esteemed and appreciated.
When you still have the ability to choose and the availability of living then turn to religion.
When you wait for the very last moment to turn over to religion you might get stuck and lose that choice.
(if its already the last moment of choice for you, don't hesitate and turn to religion as you would prefer)

manipulation

We all know what to do when in pain or hurt deeply.

In the worst case we begin to cry.

In some cases we act and retribute what has been done to us.

Other cases we either fight or flight.

Manipulation. The terminology is quite clear.

Being influenced in that way that the influencer almost certainly knows what the other does in reaction.

If i want a cookie, i ask for it.

Does the other say 'no'. then we could go a step and say we are hungry.

Manipulation is the study of action reaction. Action is all kind of human behaviour. And reaction is also all kinds of human behaviour.

Humans have all shared a character, based on their feelings, emotional life, and mood.

If we get influenced, manipulators will try to change the way we feel about something.

In our youth we get lessons on how to behave good in different situations.

We learn how to adapt to society. In the circle of our social status.

If manipulators want to change the way we feel, they use a couple of steps. By which they can predict what kind of personality we have.

In a couple of steps, interventions they know what reaction we will give.

Then when the manipulator knows. He can choose his intent for changing us.

I'm not giving any steps or interventions. But so you know its possible.

vulnerable reactions are wanted by manipulators. Then they change your own feeling by impressing you with either a meaning supported with told evidence.

Or by impressing you to make you insecure about your own right to live or behave as you want.

Manipulators. A goal for them could be to persuade you to follow their social group.

Manipulators. A goal is to influence your feeling a certain political point of view is important.

Manipulators. there goal could be to be a head of a religious or political group.

Dictators. Learned to manipulate.

But with manipulating you don't make happy people. They likely dislike manipulators when they get the bad consequences of their reactions.

Telekinetics

Tele means there is distance between the one, making the influence. and the object of influence.

The one making the influence has a couple of features.

One is to create energy used by the process.

The second is the carrier of energy leading towards the goal.

The third is the direction of the influence.

The fourth is converting energy to the destination process of influencing.

All parts are important. If one is lacking purpose, or doesn't have the shape it has to get, than nothing happens, or with much energy used it can do harm or damage.

The energy used in the process depends on what kind of process is used.

Is it a natural physical process then likely you wouldn't use electricity as the source.

But if its a process by a named machine, then you would probably use electricity or atom fusion.

The second part, the carrier. Is it natural then it would be a sort of seed, or stone.

Is the second part in a electrical process, then it would be a needle, a bullet or name it.

The direction is not very important, because it would be either the one doing it who points in the right direction.

Or a computer computing the direction.

The fourth path of converting the energy.

The better technology is used, the less likely the opponent knows what is happening.

Telekinetics.

There is more inside the earth than on the surface of the earth.

They say cores of metal, have a secret function.

They say some wealthy regions have more inventions than they say or put visible.

mindcontrol

Mindcontrol, a difficult task for someone with a weak mind.

Mindcontrol, an easy task for the mentally trained persons.

As i have been told, mindcontrol is possible.

But it works not like a book on linguistics.

Its more or less a question on symbols.

Language, like latin also works on the mind. But beware
you loose or win influence.

And if you loose, you could get mentally ill by it.

The question of symbols. is as a picture, seeing it, and thinking
of it.

Visualizing it in your mind.

The right symbol gives you more will power. power to think
whatever you like.

The right symbol gives you extended knowledge to put in your
daydreams.

The symbols? Where to find.

The symbols? would be hold secret.

The symbols? Guarded so the might of it is not given to them
without the same ideals.

I just saw a symbol. Was it rosecrucians, Was it a freemason?

A good search, gives the treasury.

A good search, a quest on psychology.

A good search, Gives answers where not many went before.

mindscanning

Do you know, what person is in your mind.

Is it you, controlling what you think.

Is your mind your property.

Your mind, has a goal for itself.

Its saying you are in controll.

But if you wouldn't have a mind, would you do the same things in reality.

Can you choose what thoughts you want, and which you don't want.

Your mind, is as a television, with movies, documentaries.

Showing all nice and exciting things.

And the number one illusion is that you feel like its happening by and to you.

As they hurt you in a daydream, you defend yourself and feel as if you are defending.

Your mind, is controlling you.

giving you surity you are in charge, but also giving you unconsciously what 'it' wants.

Brainscanning would be possible with some future technology, counting electrons in your body and head.

Brainscanning changing the voltage of your nerves. Already partly possible.

Making a blind person able to see.

Making a person with no taste as having taste.

But brainscanning is not mindscanning.

A technique by which the person scanning you, would be able to 'read' or 'see' your thoughts.

And if the thoughts are known, what weak spots do you have.

Immediately agreeing if 'touched'

or immediately disliking if 'touched'

Mindscanning, a couple of hundred mindscanners are on our planet.

But what their goal is. We don't know.

They can scan your mind. And they have a mind themselves.

A step beyond mindscanning has been a theme in movies.

Mindcontroll

changing someones reasons to act.

Changing someones will power.

We all know that certain medicines act upon the spirit.

Think on Anti-Depresion

Think on Anti-psychotics.

A little step further on the road.

A medicine to cure mindcontroll.

A medicine to cure mindscanning.

Don't be scared of mindscanning or mindcontroll, if you haven't had any difficulties living.

then in the future, it will also not have much difficulties.

Vampirysm

Long times ago, when the fantasyworld was real.

The humans were all different from each other.

Humans with good personalities won the war over existence.

But other life forms were apparent and had their roots in the animals species.

The lions and leopards, the snakes and reptiles.

They all were the basis of a specie which is feared by all who know their existence.

The lions and leopards became known as a human specie without proof of existence. But shown much in movies and described in books.

The snakes and reptiles, became the super intelligent personalities, counting and measuring their way through life.

Lions are predators, so the human race deriving its shape from it were known as vampires.

Vampires not living from human blood, but living of the same source of food as lions do.

The goal of vampires is not to eat human flesh, but to feed on flesh in general.

The goal of the reptilian people is not to be cold blooded, but to see motives and thoughts and anticipate on it.

Vampires; If they would live on human blood. What use would blood have.

Snakemen; If they would exist. What cold blood would they have. No empathy, No warm feeling.

Vampires; if you meet one, be aware and step into daylight.

Because the darkness is in their possession.

Snakemen; If you meet one, be sure you act without calculation of acts. Because every thought they know as reactions to actions.

Vampires; In daylight they are restricted to normal behaviour.
But at night they show themselves as the beasts they truly are.
Snakemen; Spontaneous, you survive their manipulation.

spirit description

Spirits have shapes of character, features, habits, ideals, goals.

Spirits are the governors of body and mind.

Spirits have a description by which some are equal in aspects.

Spirits, it has a definition by which persons look when you look in their eyes.

Spirits. You could say they have a view of the consciousness which looks through the eyes.

Description is not easy because as many men there are, as many aspects there are.

In the far past, creatures existed living and acting as dumb animals.

That past, spirits where in sleep and were not experiencing life as we do, or are able to do.

In that past the genes for the humans of our time were formed, got their shape, and were the basis for

how spirits in these time fulfill their wishes and acting for protection, food and culture.

In that far past; We were named dinosaurs. We were named; Primitive beings.

Dinosaurs. We know them as vegetarians, as meateaters.

We know them as smart instinctive beings.

Those Dinosaurs had certain spirits which expressed in their bodies.

The genes were in those times created or changed in evolution.

All humans have a dinosaur-description in their spirit.

A dinosaur description is being able to be recognized to look in the spirits eyes.

Through the bodily eyes.

Through the behaviour of beings with awareness.

All humans share the dinosaur description. But all humans are appointed in description to a certain type. A type compared to a specie in the dinosaur race.

Body characteristics

Most living beings; Rather animal, human or other.

Every living being has a form an body shaped according to its needs.

So a animal eating plants, will have other features then meat eating animals.

It changes with the size and the purpose of the beings.

Human bodies have a form and shape to behave as intelligent beings.

We live on earth with gravity so we need enough muscles to move.

muscles depend on energy sources like oxygen and sugar.

oxygen we get from the air. sugar from food.

A futuristic society. For example we live in space.

A company with space stations. They would imitate gravity or be total without it.

Without gravity, our muscles will deter. With not many muscles we need less food, less oxygen.

Our bodies would get thinner. long thin limbs.

We all know the picture of an alien with long thin limbs and a big head.

If we would live in space. We would have the same bodily characteristics.

On the other hand,

if there would be no oxygen. We would not be able to exist as humans.

Our metabolism would fail as lifesystem.

Metabolism is largely dependent on oxygen.

Maybe if we would survive; we would have blue blood, depending on other sources similar to oxygen.

The big black eyes of aliens, What causes them.

Is it just with animals depending on visual sight which gives

them a different shape.

As humans we only can look at what we want to look at.moving our eyes.

If beings more intelligent as us would exist. They would have the brain power to see much more and observe more, without getting exhausted.

They would be able to seen 180 degrees from top to bottom without getting entangled.

Independent Government Watchers

A big name; a special function.

A big name; international value.

The government, of countries or regions should have some rules by which they

can be measured in value of human safety and peace.

A country with a law saying a hand has to be cut off would have a negative judgement by the watchers.

A country giving fulfillment of basicall needs get a positive judgement by the watchers.

The watchers are internationally appointed by a gathering of the statesmen of all countries and regions.

It judges the governments on important laws and rulings.

The watchers are educated to have a base of measuring countries.

They judge countries like dictatorships. and ideally they should be able to remove a dictator.

Countries allowing a judgement, and working towards a positive judgement would be allowed to get the goodwill and subsidy and all good rules.

plight for happiness

In some upanishadic writings, and as shown in some documentaries on the internet.

To be happy; a simple rule to follow.

If you would be a criminal, or bad person. You get happy by having empathy with your victims. Giving them mercy and without harming or killing them.

Second for people, very rich, able to fulfill all their dreams.

They should abstain from fulfilling their wishes. They should live with austerity.

The third for the biggest part of humanity.

They should invest in charity. To become happy.

Panentheism

A question of hierarchy.

Is the biggest, greatest being in this universe;
transcending reality.

Is it in comparison to a screen, as the screen and the computer
projecting on it.

Or is it only the screen, or only the projection.

Reality; Everything, or a part of everything.

What is the source of intelligence,

The source of consciousness.

Pan en theism.

The reality and the being of gods above it, ruling according to
their values.

Time is it superceded by a being or spirit.

Time is it without rules for higher beings.

The lord of time.

The lord of creation.

The lord of existence.

We pray to Him by his characteristics. Like the lord of lords.

The lord most high.

Intelligence

All living beings have a kind of intelligence.

Plants have little, and know how to grow to big trees or plants.

Animals have from little to high intelligence.

In gathering food or defense.

Animals looking like humans in simple form are monkeys.

We see beside foodgathering and defense also simple social rules.

As we humans have intelligence, we can call a part of intelligence to

understand certain observations.

For example if we wake up in the morning we experience where we are, what day it is, what we are going to do during the day.

This knowledge doesn't come out of nothing, it was available after sleep.

Certain knowledge has a meaning in patterns or social rules.

patterns by which we see or can do what is asked of us, or what our plans are.

Patterns are for example in driving a car.

A pattern is the road, what is allowed on the road, what our behaviour should be to reach our destination in a safe way.

Another pattern is the education in youth. We learn to speak, write and count. And culture.

Social rules are action reaction of what is good to do.

If you live with other people, a social rule is to communicate about daily things, from food to pleasure.

As we humans have an intelligence we could compare it with 'as above' 'as below'

Beings far more intelligent as us, would have more intelligent behaviour.

Not only understanding patterns or social rules.

But understanding symbols, compared with mathematics.
symbols changing visible meaning, changing visual value.
Beings understanding more intelligent sources would be more
capable of getting a peaceful time.
Or according to their goal, what they strive for.
As humans can build computers, and communication
technology by which lots of information are sent and received.
In the same way there are intelligent creatures having great
source of consciousness.
We as humans could get their attention by creating a symbol
with a meaning expressing our goodwill.
We as humans could get their attention by using symbols
which are available, and pointing to wisdom.
Its the same idea as the Egyptians expressed in their pyramids. A
big world miracle. with a meaning not fully discovered.
Such symbols are sometimes hard to create, or easy to create
depending on what is used to build or form it.
Intelligence. May we as humans be blessed by the universe.
Intelligence. May we as humans be blessed in our lives.

advertising for the gods

Most people have a set of beliefs.

Whether it be religious or philosophical.

Whether it be new age or spiritual.

Or it could be old traditions or cultures.

The belief you have in a certain role of adviser or support.

Its giving you energy and a reason to keep living or to fulfill certain goals.

For example someone believes in Christ,

He will do what he thinks is good for his belief.

And he will be influenced by Christ, or by his belief in Christ.

Christ is advertising through his believers.

They go to church, attend gatherings of social value.

Another example is Krsna, a hinduistic god.

He inspires his devotees to live in a healthy way,

He influences them to choose healthy things for body and spirit.

They have gatherings and wise books to help them being devoted.

The advertising is what's visible on the outside.

for example the movement of believers to their churches,

The movement of devotees to gatherings.

The writings in books and magazines. trying to convert normal people to their religion.

Advertisement is visible in all religions or cultures.

Whether it be good or bad.

People who associate with bad or evil things, are visible in their advertisement of their idol.

Christians mostly have writings or books like the bible in their home.

Hinduists mostly have writings and books about hinduism in their homes.

Heavy music is a sign of a certain belief, and shows its meaning by the music or books that the person possesses.

Tell the life of a human by his interests.

Someone telling he is a believer in Christ, will most of the time not have heavy metal, devilish books in his house.

Someone telling he is a fan of heavy metal, will not be associating with books about social support for poor ones.

Its a contrast of interests and of religious interest.

Rejection of Gods

In the past a lot of gods had existed. Some giving advantage to devotees.

Other demanding life or parts.

A couple of these gods are named as planets.

Mars giving martial arts.

Jupiter giving society magic.

Saturnus demanding war and famine.

And a lot of other gods,

Some named after aireal spirits; like Calimero.

Also gods named after persons, famous or because of making differences in society.

Like Krsna, Jesus, Ganesha, Yama.

Krsna was famous because he was wise, and was incarnated from the highest personality with might.

Jesus was famous because of his social values and his performance of miracles.

Ganesha was in another kind of civilisation and prevented a bid disaster.

Yama was the god of death in times of early hinduism. He was named after a person who was very obsessed by war.

All gods have sources in human values.

Some being important because of higher meaning.

Reject religion if its not of use.

Reject religion is its not good for society.

Reject religion if its not serving the goodness of the universe.

Johannes the baptist

In the times around the life of Christ.

There was more to philosophy than only plato or socrates.

In the times it was favourite to speak about wisdom in opinion.

Johannes the baptist,

Of what did he get his wisdom,

which even was mentioned in the historical books of that time.

He said, if you have two sets of clothes then share one with poor human.

He said, if you want to step in a good life with good moral values then be baptized.

He said a lot of things, of which most is forgotten and vanished.

His wisdom was,

If you have more luxury or possessions than necessary then give what you have in excess to other people who have nothing or less than they need to live.

The same wisdom; a couple of years later was told by Jesus.

Johannes the Baptist.

He was the most little in the kingdom of heaven.

As was said.

Johannes, is still wise in these times. with the books in which he scarcely is named.

foretold

In these times we experience disaster, war and famine.

This we say sometimes during era's of time.

From back to 3000 before Christ till 2000 past Christ.

In the books of religion there is a foreseeing of disasters, war or extinction.

But what value does it have.

In the prediction its told that certain things will happen from war and being slaves of a society system to religion vanishing to nothing.

The war of the great beast for example, what use would it have to predict that long ago,

and the purpose would be in the far future.

But the problem is disaster and war , on that scale is happening once in a couple of hundred years.

What use has a prediction if its not that special to be foretold for ages far in the future.

In my opinion.

The great beast and other stories are made up by some people with a role of prophecy in their times.

Because no truth can be said about the future, at least not without intelligent logic.

So don't be afraid.

don't be scared of predictions.

If it would be true, then signs of certain times would have to appear.

The same value can be given to the biblical stories about the saviour.

He died on the cross. a normal punishment for criminals in that time.

If people steal, or kill they got that kind of punishment.

What special would it be to give Jesus that kind of punishment,

and then get
that special value that he died for us on that cross.
My opinion is not that he died without meaning,
But that its not the death on the cross that is important.
But his act of giving his spirit to his Father.
Jesus other values is his speaking of wisdom.
a meaning can be;
He didn't die at all,
but his surrendering to his Father can be understood as a
crossing of his old self or mind,
to a new life in which he didn't had a ego or self anymore.
For example,
He was doing everything with free will,
But after his surrender he had no free will anymore and he
acted with will of the universe.

Oracle

In times long ago, in the greek civilisation there was an adviser.

Or a speaker of the god.

The people turned to them for advice and choices very difficult.

These oracles as they are named. for the most obvious one is delphi.

They gave answers very symbolic, with meanings not easily understood.

The oracles of what did they got their power to foretell, and foresee.

One explanation is that they got their specialty of a big power, named mother gaia.

Mother gaia was the name of the intelligent source and consciousness of the planet we live on.

Mother Gaia, named in modern times our earth. Nowadays we don't believe the earth has consciousness or living intelligence.

We all know that mother Gaia, is not very visible, there are only a little group of people who tell or speak about her.

The oracles got their ability by surrendering to the earth, mother Gaia.

The oracles changed the society.

In language its named the sybillian movement.

Change in science

Technology has many goals.

From giving luxury to humans,
to giving might to kings and presidents.

Technology has its source in inventing good ways for humanity
to live and behave.

Technology, if we use it only for peace without war.

It has a good function.

If war is ended and peace is stabile.

Then the society will flourish.

Energy

Energy is derivable from sources.

One source is oil from underground.

Another is gasoline or gas.

New sources available around 15 years is windenergy and solar energy.

But sources unnamed are the source of water hydrolysis.

And another one is changing gasmolecules to higher electrongroups at the gasmolecule.

Gasoline can be purified.

Gasoline can be used more efficiently.

And there is energy from air.

changing airsources to less oxygen or less nitrogen.

I don't know the process by which its possible,

but its possible

Dangerous

A danger on this earth is not the animals named predators.
But the big mighty invisible ones.
The lords governing our money system.
If they snap their fingers.
Things big change.
The society is as a magical stick in their hands.
One waving of their hands,
And all countries fail in their economy.
One click, and inflation rises to high levels.
One click and technology is not better as 500 AC
Be warned for what earth is governed by.
No security, No surity.
Its as easy to make war as to make peace.
Its as easy to give labor,
as to take it. with a lot of unemployed ones.

A big danger

The biggest danger we got is:

A particle accelerator.

The big ones with a radius of several miles.

If they get used without proper surity or security.

We would maybe make a black hole.

And sending the earth to devastation.

Messiah and Atlantis.

Most people know the myth of Atlantis.

A country or governed region which vanished from earth.

The most applicable story is,

It didn't vanish for no reason.

It discovered a big disaster by which they would go extinct.

The solution they found was getting the most important people in space.

Going to a star constellation far enough to not being reached without minimal technology level.

Maybe they went to 'The masters of Orion'

And a combination with another story.

Jesus Christ said he was going to his father to make up homes for his believers.

Was he too a cosmo-traveller. Going to a far star constellation.

Jesus Christ. Getting with or without space ship to a better place in this universe.

Atlantis, let their region get demolished. sending away everything they cared for.

Maybe an insight. They let a computer annex machine in or on the earth, which governed all that beliefs in the space-traveller.

A computer answering all prayers. governing religion.

Forbidding people to say certain things,

Forbidding certain acts.

Future Energy source

We all know energy is exhausting at a very fast rate. We all look and search for better sources.

And the big companies try to be the first inventing it, and making their profits for the future reasonable.

A source which is discovered in the future is:

Making from oxygen (O_2) Ozone (O_3)

This has as byproduct an energyburst which is enough to create in comparison

half a cubic metre is the same as 10 cubic metres of coalfire as source for creating energy.

There is a drawback. this process creates clouds of ozon, and everyone walking into that cloud, dies immediately.

This whole process is like fusion between two molecules creating a new flash of protones and photons.

I hope everyone in the future can be held safe, by depositing or recycling the bad materials to unharmed kinds.

May the Allmighty bless thee.

children and awareness

Young children mostly have a good view on reality.

Being mindfull in their day to day reality.

Children, play, and act in full intuition.

Children, live as their emotions give them.

Crying and being happy.

Playing and learning.

If you want to let people be more mindfull or enlightened.

Then begin with learning children to be aware in their lifes.

Learn them to avoid fantasizing.

Learn them to avoid daydreaming.

Learn them to trust intuition.

Learn them to nog enter the sphere of the mind.

reality

Air to Air

Ground to Ground

May our wishes come true,

May wishes become reality.

Wisdom is as guiding to the purpose needed.

Wisdom is as giving way to eternal coexistence.

Wisdom is as living without pain or suffering.

Wisdom is as giving health to all living beings.

Wisdom is as keeping harmony to all of real beings.

Why do we grow,

Why do we evolve,

Why have we purpose.

Why is value a goal to reach.

What values do we have.

What values are best to aspire for.

May we be guided by the light of awareness.

May we be kept safe by the light of goodness.

May we grow by the power of the eternal wisdom.

Is life giving satisfaction.

Is life hurting us with slavery and addiction.

Is life hurting us with enemies and tribulation.

Why is life. Existing.

Why is lie. Visible.

A blessing for the reader.
May you grow in wisdom and
good energy.

Green Line

Bastiaan Oostendorp

patriarch & matriarch

When the world is governed by man,
it will be a competing world.
When the world is governed by women,
it will be a world of mutual care.
But what use is care when only healthy people exist.
But what use is competition when all people need help.
Its good to have parents, both caring both giving competition.
Its good to have both male and female in the society.
Most people feel internally what they want.
Some want typical male things,
Some want typical female things.
But in the level of technology,
there can be things possible not very good.
Male persons getting children,
Female persons doing rash war things.
If male persons are behaving as females. What use is it.
If female persons are behaving as males. What use is it.
It's a theory that if society get more crowded.
People are diversing from their origins. for example males feel
themselves being females.
Not procreating, it diminishes the amount of new humans
being born.
If all has the good place it belongs to. it will give peace.
But if all things are getting into chaos. what use is it for
harmony.
If values are losing value. Get a matriarch healing it.
If values are fought for to hard. Get a matriarch to restore the
hierarchy.

If values, would be important, and more important than the feeling of happiness.
Then get a patriarch giving way to hierarchy.
If children learn to compete, and war is the highest purpose of life.
Give way to matriarch.
Patriarchs rebuild hierarchy.
Matriarch makes place for imperfect creatures to live.
Patriarchs strife for individuality and goals.
Matriarchs strife for a social group accepting all, even crippled or limited.
Patriarchs needs borders to transcend.
Matriarchs puts every creature inside the borders.
Patriarchs defend borders with violence or force.
Matriarchs invent rules to question creatures not wanting the borders.

Royal spirit

Spirits, we all are alike. conscious, ability to move.

Feelings or whatever our source of action is.

But there would be a special kind of spirits.

We don't name them, but i could say they should have a name.

Royal spirits.

They have blue blood.

blue having the value of virtues and wisdom.

blue having the value of not harming or damaging any live creature.

Royal spirits,

from every point of view, or poing at which they live.

they can regenerate towards the three goals of spirits:

Happiness, Health, Goodness.

These royal spirits, when brought in danger, when being in hardship would

have the ability to turn every bad situation towards a good situation.

They are royal because they as history tells us, would be sooner or later part of royal families.

Unless they would have a certain task.

Royal spirits.

If talking of dreams.

They would be the winners in war,

They would be the inventors of allneeded things and processes,

They would be the leaders giving peace,

They would be the teachers teaching wisdom,

They would be the medics saving people.

Royal Spirits.

Its not good testing for it, for you will not find them.

Its not good educating or forcing spirits to be one, you will not create them.

Its not good paying for them, for they are not worth their
existence in money.

May Royal Spirits, be born, or created by goodwill.

May Royal Spirits, have place, and feel accepted.

Is wisdom in a country. its the source of wisdom, as the light of
consciousness.

Is peace in a country. Its the source of peace, as the light of
consciousness.

Is harmony in a country. Its the source of harmony, as the light
of consciousness.

teleportation

In science fiction books we read about teleportation.

But in reality it needs a lot of work to make such a thing possible.

In our dreams we teleport to another planet, and live their as kings.

Or we teleport to big oceans and swim as dolphins through it.

Teleportation not only needs that your body is rebuilt on that spot.

And with the body all the physical characteristics and cells.

When the body would appear there, the question is if your consciousness

also appears there.

And if the consciousness appears there,

we ask the question is the content of your mind also available there.

Some experts in computer technology would compare it with the use of a access key, or code or address is the basis of rebuilding a creature.

Both the physical body must be created,

and it needs an address key, pulling the conscious soul to it.

In theory it would be possible.

But in reality. maybe its quantum mechanics which make it possible.

In bad cases when the copy of the teleportation is close by the original.

And both act as being conscious, how do you know which one is the real. which the clone or copy.

and are both of them conscious.

And if you could teleport, would you like that your conscious is in the newly created person, or lives on in the original one.

Teleportation.

Very Important People could use it.

As we dream about being famous. It could be fame in triple or double.

Teleportation. We make some people very skilled and educated. And teleport them to regions with much problems.

Those copies can help restoring the good society.

Would it be a sin? if its used for healing or goodness?

Hierarchy

Every being, living and able to move or act.

Every specie of life,

Has the ability to be conscious.

And consciousness comes with the ability to compare.

Comparison of food-supply, social status, group-behaviour.

In humans there is the desire to belong to a group. a social group.

This desire for being able to behave in a group, is the protection to be safe of visible dangers, and dangers to be protected against.

As humans have laws, being the conditions to be part of a group.

Other living beings, also have certain laws.

Not always written down and taught by speech.

Animals, have rules by which they behave.

And if we look higher in the hierarchy.

Creatures not known to mankind, or not seen by us, would also have rules by which they act and interact.

These creatures we not see, we not know of.

Have their own laws and rules by which they may live or be member of a group.

We as humans cannot force laws or commands on other creatures, intelligent species.

Even when those creatures would have been humans in the past, They are not bound to laws applicable to living and visible humans.

If humans are part of a hierarchy. The hierarchy is responsible for letting humans have the place they have access to, or are part of.

If humans would force their laws on creatures not seen or not

known.

What right could be the reason for it.

The same we treat our domestic animals.

We don't explain the law to them, but they are trained to behave in a normal way, making it possible to have them around us.

If we are part of a bigger hierarchy. With the boundaries being the borders of the universe.

We are not responsible for things, we are not able to understand or anticipate with our intelligence.

If we would have a choice.

It's always better to be part of a group, a social group. giving protection, purpose and peace.

In that way of understanding, we would have the question, does life exist,

not only on the hierarchy down, name them animals, but also the way up. sometimes we name them angels.

May goodness give way to blessing.

expert in mentalism

Expert in Mentalism.

The object of their expertise is the mind.

They use the mind, to save and protect in that sphere what is valuable, what is weak.

Mentalism.

They say the mind has no connection to other minds.

They say the mind is merely illusion.

They say the mind is not source for governing or labor.

They say the mind is just an eye of creating desire.

But they are wrong.

The mind is from old days used to create and manage whole kingdoms.

Not only in the mind's eye but also in reality.

But they are wrong.

The mind is by some secret groups used to subdue all powers.

May the mind be given value, but not the value above other values.

May the mind be given shape, by secrets of wisdom.

May the mind be given figure, by the harmony of a balanced figure.

The mind, the rosecrucians made use of it.

The mind, The groups of illumination use it.

The mind, the Freemasons use it.

But with no mind, you are not known to those powers.

But with no mind, they say you live instinctively.

But with no mind, Surrender to that highest visible might is possible.

the mind is the symbol, which gave mankind its technology.

The mind is a symbol, to let people talk about their things important.

May the mind, get a place below the creatures of conscience.

Magicians of Yore

In old times.

There was only a meditative way of experiencing.

In that time, we could say every one was wise.

Observing their own life, and acting as innocent people.
giving their feeling the compassion needed for harmony.

In old times,

some kings were visited.

They looked kind odd.

As jokers, As artists with their excentricity.

The magicians as they were called, said,

salutation to thee oh king, for we bring new things.

For thou to experience.

If thy reject our gift after three times of enjoying.

We will give you the riches of the earth.

And the hands of all next generations will regard you with offerings.

And the kings, as wise as they were. Knew. The purpose of good things lay in the experience being not with damage, wounds or bad intentions.

And they Admitted.

The kings were given the gift of dreaming.

The kings were given the gift of seeing, what's invisible.

The kings, started dreaming.

They had in their real kingdom the citizens caring for food, drink, and art.

But the kings had no gold, silver or diamonds.

And as they started dreaming, they had palaces of gold, cutlery of diamonds.

They enjoyed their unreal kingdoms.

And before the three times were done. They said. We love the

dream because it gives riches, and wealth we not yet have
known.
The magicians, said may we offer it to your citizens too,
It might be the source of peace. Because the things wanted, are
being dreamt of, and
need no real accomplishment anymore.
The kings, as deluded by the dreams, gave their permission.
As time flies by.
All the future citizens loved to dream.
But instead of bringing peace.
It was the source of war and terror.
Not because dreaming gives fulfillment to desires,
But because the reality was misunderstood.
May those magicians call back their magic,
And leave the wise.
May righteous kings arise,
with a solution to this everyday problem.

Space recruiter

If we all would see whats invisible.
We would all be very depressed.
There is a secret agency, recruiting people to be agents.
special agents with special equipment.
They are sent out either on earth to protect the democracies,
or into space to heal interstellair conflicts.
Very futuristic. They are known without characteristics.
But from earth, some are elected,
and from other places too.
When you are between twenty and thirty. You might be
contacted,
if you tell other people you want to be part of such a company.
On earth they sometimes are disguised.
Some say they are disguised as aliens,
not because they are alien, but to hide their origin.
When you are elected for that secret group.
You have to do very difficult tasks.
Maybe not worth the job.
And if you are found at the job,
You might face a very painfull investigation.
Some rumours are that such a secret group or organisation
exists.
But rumours are not proven with evidence.

immortality

The seven cans of immortality.

Slowly you grow to have an immortal body (except physical wounds)

This immortality is given by seven cans of liquid.

After all seven has been drunk,

The body is able to live forever.

The body that lives forever, does not age, does not die.

The seven cans of immortality.

Sometimes a hero is born, because the wealthy having access to those 7 cans,

give it to someone with a very bad disease.

A rich man giving a permanently ill person the chance of survival.

What would you do?

Hold immortality for your own good,

Or deal with compassion by sharing it with someone else.

synoptical sound

There would be a sound,
That would bring peace and harmony to a society.
When that sound is played, everytime peace grows.
They call it the three-sourced sound.
With a balance in frequency.
No-one knows that sound.
But when found the society would quick rise to harmony.

When culture deprives

When culture deprives.

Criminality will rise.

When culture deprives.

Religion will be forgotten.

Rules of torture are used as defense.

There was a myth from long ago,
in some kingdom not seen by us.

They said, when some persons are in some way special.

Not known because they operate in secret.

They use an operation room in a hospital.

And bring their victim on the table.

What is done next.

Is the worst pain to be inflicted.

No-one survived.

No-one ever found the aggressors.

We only know they leave a red scarf on the spot.

What reason they have. No-one knows.

May such a sect of inflicting pain never exist.

besides the persons being the offender, are expert surgeons.

Pit of darkness

Is there a place on earth,
Where people see worlds in their eye.
Where people live lives unseen.
Where people see things never existing.
Its in the pit of darkness.
The mountains barren en for extinction.
When as a human you arrive there,
You will dream dreams making you suffer.
You will dream dreams, taking your life-force.
When you wake up,
You have the memory being in hardship.
Without being in real hardship.
They say its the abode of hell.
May we all be saved, and led away from it.
Sometimes they say its better then real movies or tv.
But when you grow old, the memory of that darkness, gives you
fear, uncontrolled fear.
May that pit of darkness, be bordered round with
unsurpassable wire.

Second sun

During day, you may do what you want.

Travel long distances,

work on the fields,

Fullfilling dreams.

But as soon the second sun arrises.

You have to go inside and close the windows.

Because the second sun, is evil.

Everyone looking in its rays, will become evil theirselves.

Everyone suprised with the radiance, quick close your eyes.

The second sun, a heritance of old technology.

Is it used for a certain purpose?

May we hope the sun will survive.

Healing sphere

In some myth:

A race of humans where highly evolved and
for their wounded ones, they used a certain room.

A room filled with a certain energy field.

It is unknown, what field it was or how it worked.

But the effect was that the human healed from its wounds,
totally without any scars.

Even when people where shortly dead they would regenerate in
that room.

The room, as was visible healed a lot of men.

from war or other causes of damage.

in one explanation it was said that the room was invented by
extraterrestrials, and stolen by humans.

And that explained also that when people where to long in that
room,

they experienced certain hallucinations.

Hallucinations. not named, not categorized.

Was it a protection for the root-owners.

Level of attention

Is there life in a specie,
when its totally still.

Is there life in a specie,
Not giving life-signs.

Life is only to be proven by the subject itself.

May life prosper to welfare.

May life create life.

May life has the purpose of happiness.

May life has the goal of happiness.

If life exists, May it be conscious.

If life exists, may it respect all life.

If life exists, May it have regards for their ancestors.

If life exists, May pain and suffering create compassion.

If life exists, May wisdom have a place in the highest towers.

If life exists, May the smartest beings strive for harmony.

If life exists, May the strongest creatures protect the weak.

If life exists, May life give life and be life.

Life, the core of it are a couple of words.

Life, the purpose of it, is a hidden sentence being sought for.

Life, the goal of it, is a memorized feeling of happiness.

Life, it exists because of three sources. Sun, Rain and Earth.

Life, it exists because of three purposes, Procreation,

Happiness, Compassion.

Life. If it creates life, its a feeling of fullfilment.

Life. If it takes life, Compassion is violated.

Life. The words of it, are the strings of creation.

Life. the sound of it. Are the tones on a natural sphere.

Life, to eternity. to temporarility.

Life, to conscious, to nonobserving.

If you loose life, it gives meaning to have life.

If you win life, it gives meaning to get life.

If you destroy life, it gives meaning to compassion.
If you save life, it gives meaning to create life.
May life, be in harmony with life.
May life be with goodness towards all living beings.
May life, create peace, for sustaining life.
May life, be conscious. To share consciousness.
May life, be friendly.
May life, be wise.

Sandy surface

As a long time ago,

some people believe that Mars was colonized with a subrace of humans.

They believed it was a nice climate on that planet.

And thousands of years before earth was showing intelligent life,

the martians already had a civilisation.

And wonder why.

They were on the surface in a sandy field.

So they made as was told by a myth a way of housing and living underneath the surface.

A surface of sand, if its would be the only drawback, it wouldn't be that bad.

But after times of war and terror the surface was filled with the remnants of nano technology.

As we today use minefields to make borders in warzone.

In those times they used nanotechnology for it.

Creating death and pain for every trespasser of a certain border.

(on mars)

And because the areas built underground were safe. It was all underground.

And sometimes someone said, why don't we live on the surface, in sun and rain.

And when such a one went to the surface. sooner or later, pain was aching, blood pressure lowered, and the being suffered and died.

Is this a science fiction, it's a myth

Transversal liquid

Every saw an invisible person.
Ever saw an unidentified spaceship cloaking?
You probably wouldn't
Because they use expert technology.
made of materials unknown to earth.
About 3 thousand years ago there was material on our surface
being used for that invention.
It was partly radio-active, partly as heavy as rock.
It shone as blue with white.
When used and made to the material needed for cloaking,
it had a process of three months,
after that time it was useable, able to travel and keep.
The material, was as liquid as water,
as thin as gas,
and as heavy as solid rock.
when its used to cloak beings,
it uses it like a fog.
and that fog has the ability to reflect what's a couple of metres
away.
As like a prism dividing light,
it gives the light a boundary and path to a new coordinate.
May that transversal fluid never be used for war or terror.
May that transversal fluid be used for peace and harmony.
A myth tells us, the material its made of, or the source of it,
was three thousand years ago existing,
but the level of civilisation was being destructed to prevent us
from every using it.
The way they made it possible was by restricting the leaders
from reigning to long.
Each one hundred years the leaders were expelled.
They did this with special force.

When the leaders were expelled, also the level of technology was being put back to lower kinds.

Transversal is not a normal invention.

but if its invented, may it cloak every innocent or weak one.

What chemical formula is this transversal liquid?

I don't know.

Disease control

In the future, unnamed, there was technology which healed most of the men.

They used a device. about 20 to 7 cm and 4 cm thick

It was put on the skin, in the armpit, or in another spot.

It was using a box of artificial tissue to create a field in the human body.

A network of threads, and nanotechnology.

It was placed on the body and was hard to remove. except if you had the password or passphrase.

The device could heal the person it was applied on of most diseases.

Diseases based on bacterials and virusses.

The device also would heal the person if wounded.

It would create a layer of thin foil on the wound.

The device, when being used for royal purpose would also give the host advice on difficult situations.

When in danger from a wild animal, it would create a smell of disgust for the animal.

And when in danger from criminals it would send a message to the officer.

A device of that technology,

We can create it in about 15 years.

But in that society. it was used for more than 4 years.

some say even the tsaristic regime had access to it.

A king of bad rules

In the past there was a king,
living and keeping his country at normal life.
When he lost his son, a little one, and found him back in the
hands of a criminal.
He loosed his feeling of happiness.
He became bitter.
When criminality was rising and no-one knew a solution.
his advisors told.
give the criminals a way of punishment,
without harm or damage to the body.
But with enough badship to hold them back from criminality.
When technology appeared to give certain creatures an impulse
of pain.
without hurting really.
they used that system.
And when a criminal was arrested he had the choice,
either live in jail for a long time,
or accept a pain impulse of a certain length and impression.
The criminals who chose pain, were put on a chair,
and electricity was hurting them, without killing or leaving
traces.
Because the pain infliction was bad, the criminals learned to
behave themselves.
Of that king a lot of things are said.
He would inflict pain without reason, because of the loss of his
child.
He would inflict pain in all his enemies. thus being a dictator.
He would have waited for that technology because he had a
wish of letting people suffer.
They said because of his realm he was a demon.

Once it was said, he was a saint, but in the history books, he was named cruel, because pain is without ability to measure, and without reason to inflict.

Saint

In late medieval times there was a saint,
as written in some myths fought every night with demons.
During day he was devoted to religion ,and spent his time
praying and reading the bible.
But at night he was in front of a gate. Out if which demons
appeared. He fought with.
What a plausible meaning is.
He lived at the side of a mountain.
He had built his home a couple of metres asside from a cave.
That cave had connection to a system of caves.
And the mountain, with all the caves was visited by creatures
which landed on the top of the mountain
and walked through the mountain and caves, and ended in the
home of that saint.
Every night when those creatures entered his house he fought
with them.
As he fought he destroyed those creatures.
Today we would name them aliens.
But in those times, they were called demons.
Another explanation is
he didn't fought real demons.
but the demons inside his mind.

the saints invisible

The saints,
We know a couple being the most wellknown.
Like Fransiscus, and the apostles.
But unknown to us are for example:
Jacobus, a sage which erased the idolatry in his time.
Before christ was born, we know the prophets existed.
But a lot of waht happened before that time we don't know.
Jacobus was in his life a pious man.
He told the leaders to heal the society from bad things.
All books with aggresion and criminality were being burned.
And all art and other things, if it serves a bad purpose where
deleted.
Besides Jacobus there was Petronius. He was an agent of the
Allmighty.
And taught the men to ask the Allmighty a favor.
And everyone might ask the Allmighty in his or her life one
favour.
And that favour might be for yourself or your loved ones.
So some asked for a judgement, Some asked for happiness for
their beloved.
Petronius was also a pious man.
In the end of that era people didn't ask anymore for favors,
but lived their lives unconscious of better ways to live.
They lived their simple lives not questioning what is above or
below.
Has these saints really existed, Not as we can prove.
Sources of prayers are for different groups different targets.
The witches of the medieval times, asked their favors from our
planet earth,
and using poetry for it.
The christians used their godly power Jesus to ask their favours.

The other religions also had their targets,
the hinduists their names for the different parts of reality.
the indians addressed their ancestors which lived in their
surroundings.

The jews targeted their prophets.

(These saints did these things because they had high esteem for
their god)

The twelve caves

In our planet, an intelligent core is visible.
Its the source of the earth angels.
Helping those who call her.
As in times of indians, America, Africa, Asia,
It was wellknown as a source for good living.
And the heritage of it was a twelve cave group which was used
to
lead the world towards its goal.
Twelve caves, in which a group of elders were discussing the
important happenings.
Twelve caves, being hidden and disguised with large doors of
heavy metal.
Those twelve caves, when earth was being besieged held the
power to reflect the attack.
Those caves are forgotten, the metal doors were taken away.
The caves filled with dirt is not visible anymore.
The indians, having thee society and power to live and defend
are extinct.
May their heritage live as words in our mouth.

silver disk

In the far future or the far past.
When another race of humans exist.
There will be a discovery of technology.
Giving the leaders the benefit of choosing the great intelligent ones.
As technology rises, and computers are more sophisticated and more semi intelligent.
It is called a silver disk in our language.
A silver disk which has the ability to catch the human soul from a fysical body.
A silver disk, with intelligence.
Intelligence used for creating a illusion of a full reality.
And it interacts with the soul being caught.
It creates a dream. little or big.
A world of birth to end is being played as a movie before the eye of the soul.
And every act leads to a next set of situations.
The silver disk, creates a dream or world, and the soul forgets it not in reality.
The silver disk looks and tests the soul on a couple of theme's
Like in movies, adventure is quest.
And intimicy is another quest.
In that sphere a couple of tests are in the run.
and while the disk contains the soul it has the option of returning to its roots,
a civilisation which created it.
The disk, as being created and sent out, travels millions of miles towards its destination.
And when arrived it falls on the surface of the planet.
And waits till a intelligent life form passes by.
And by passing by it fogs itself to not being discovered, and

then launches itself to
take place in the brains of the one passing by.
The silver disk, there are interpretations that give it a purpose.
But the real purpose is unknown.
One purpose would be to elect a new king with the best
personality.
One purpose would be to capture the soul and bringing it back
to use it as a slavelabour.
One purpose would be to safeguard the soul from danger or
pain.
One purpose would be to test all lifeforms in the universe to
discover new or better ways of living.
As it has purpose, may it be used for good intention.
May it not be used for purposes of suffering or war.

Water Field

A Water field, is not yet discovered, but its as like gravity existing and working.

Water field, is all the water of the earths surface which creates harmony.

when we would use water as a source and changing it to a chemical formula by which we would gain,

The water field would loose value and effect.

Water field, some experts say its the basis of civilisation.

Some expert say, without it there will be a high rise of criminality.

Some experts say, with a water field, there is contact on a basic level with all life species in the universe.

If water would be used to give memories of humans, or other species to a persistent information carrier, the water field will diminish in effect.

Water field, we don't know what use it can have.

But its also being hold in the darkness of what is available.

A certain memory of me is Black Energy using water and some extra materials to create a semi-intelligent life form. Acting as for example humans, but far more worse. Because they lack the conscience of humans.

Another memory, the invention of the water field to hold memories or movies about happenings which are a large influence. Putting for example unsolved criminality into the water.

A third memory is having lakes of water with a certain projection power. Being able to show large movies, like gladiator fights into the water.

As watching a Tv but then in a large basin of water.

A good function of water is, and will always be the fullfilling of thirst.

radioactive

Radioactive is the emission of certain particles with a frequency of radiation.

We all know the nuclear powerplants, with their use of fuel to create electricity.

They create out a couple of elements a energysource.

But the afterproducts or byproducts are highly poisoning.

We know when a nuclear power plant is destructed, or damaged that the people living in that area are being exposed to radiactive materials. And having chance of getting ill, or die.

We should instead of nuclear sources better use other renewable sources of power.

The technology of powercreation is available. Only the big organisations don't use it, don't make it because they want the highest profit, or want to keep the golden hen laying the golden eggs.

Renewable sources are like wind, water or solar energy.

In the future there will be more sources, like from seawater to sweet water.

From metals combining creating an power field being able to be a source of electricity.

And the use of Ozon to Oxygen. A way of transformation that gives high values of energy without much bad byproducts.

Radioactivity, a couple of decennias ago they made advertising with the good purpose of radium water.

By which many died.

Its the same case with other technologies existing today.

But its worth a chemical investigation.

When large cooperations have the right or scepter to make profitable energy or products, it will be a fog what will be damaging or good.

Free time

Most people with sparetime, spend it at games, stories, books, or television.

They feel as being entertained by that kind of timespending. But most people know, that they cannot do all their time such things.

Because work or study requires attention and time.

There is a balance between work and spending for pleasure.

If you read stories, nice books. You learn how society and social interactions take place.

For example, if you read books, about relationships and all kinds of behaviour. You learn how to get a relationship or what you can expect with how you feel and interact.

Thus besides the entertaining value of such books and movies, it has significant value of learninh how to behave.

If you want to spend your time on entertainment, combine the good and the pleasure.

By choosing subjects from which you learn.

If you want to be an expert in the it sector, with computers.

Read all kind of books or movies about that subject.

There is a quantity of books regarding that subject.

Its the same with other theme's of learning.

Sage

there is wisdom for those searching for it.
You can talk with old people, with skilled people.
Or use the legacies of sages being written down.
If you read and study, you will find the definition and the
explanation
of wise talks or writings.
Sages are born by speech.
Children are born by lust.
Goodness is born by experience.
If sages are present in society.
If they have a good rank.
the world will go to rest.
And happiness will as sunshine warm all coldness.
If children are born.
there will be extra chance for labour.
Giving way to wealth and prosperity.
And as the moon, it gives light in darkness.
If goodness is born.
There will be countries taking fugitives.
There will be countries using technology for giving health and
compassion.
There will be countries creating laws to the benefit of all.

being good

being good.

As a result of good teachers.

being good.

As a result of good nurturing.

being good.

As a result of much experience.

being good.

being tired of pain, and infliction of pain.

Being good.

Is it giving good contribution to society.

What is good in the past.

Is it good in the future?

What is good in the first days.

Is it good in the last days?

If goodness is defineable,

What symbols or words would you use for it.

If goodness needs a description,

What would you say or paint.

May goodness, have a value, for all of whom wants to do good.

May goodness, have a symbol, for all who long for it can understand.

Goodness. If its meaning is forgotten. What use will our society have for happiness.

Goodness. If its symbol is lost. How will we have a civilisation with laws and moral values.

Goodness. it is gold in hands of wise men.

Goodness. it is silver in hands of wise women.

Goodness. it is spontaneity in hands of children.

Goodness. it is contentment in hands of old people.

Is there goodness without benefit?

Is there goodness without appreciation?

Is there goodness without being joyfull?

May through all times. wisdom, peace and goodness have a place.

Next to all good virtues being result of it.

May wisdom and virtue be a seed to be planted. Giving large trees of all kinds of happiness as fruits.

War and Terror

If there would be one reason to choose War as a tool of succes.

That reason would be personal gain of status and rank.

If there would be one reason to choose Terror as a tool of succes.

It would be the reason as told by religious seer.

May War be cast out and get a place by which it does no harm.

May Terror be cast out and get a place where it scares and wounds no one.

War, is a conflict of interests. But the wisest use no war to get their goals.

War, is a conflict of egotism. People using their possibilites to reach their goals.

War, is a way of getting riches and luxeries. Because stolen they give pleasure.

May Terror be invented by religions, as some prophets say.

May Terror, give our religious righteousness as some prophets say.

We use war because our rights are violated.

Such thing says a president or leader of a country.

We use war because we run low on rank.

We use war because we are not the best country.

Such thing says a advisor of royal people.

May Terror end in mutual friendship.

Sharing gifts with each other.

May War end in mutual peace.

By sharing technology and wealth.

War is what no-one wants to be part of, if they are in danger by it.

Terror is what no-one wants to be part of. If it touches health of those you love.

May war be a word without meaning, without the discovery of its use for fame.

May terror be a word without meaning, without the meaning to use it as a tool for success.

Vision on heaven

Traditions, like told by old ones.

Tell us that life gets its value by caring for the parent and grandparents still living.

If you have grandparents. Care for them. Because when they reach heaven, they will remember you.

If you have parents. Protect and care for them. Because most mistakes for raising young children, or living life is because we do not take time for our parents.

If parents talk about the mistakes they made. It's easier to learn from it, than from trying everything on your own.

And the solutions your parents found, can be useful for you too.

If grandparents take care of grandchildren. They will teach those children ways to overcome youth problems.

And grandchildren give grandparents joy of living.

If people cast out their old ones, grand parents and others.

Civilisation will become a survival.

A survival only strong, rich and famous ones will win.

If people esteem their old ones and grandparents. Civilisation will get an esteem on morality and virtues.

If old ones take place in the government. It's sharing wisdom.

And giving place to both rich and poor, giving place to both healthy and wounded, giving place to both the wise and the idiots.

May our society choose the best way for having welfare on our planet.

Mercy

May mercy be in the heart of the offender,

May mercy be in the heart of war.

May mercy be a cause for friendship.

May mercy be a cause for peace.

Let harmony build a house in your kingdom.

Let harmony create jobs in your society.

Let peace be the reason for prosperity.

Let peace be the cause for welfare.

Mercy to the victims.

Mercy to the lost ones.

If pain is the cause of revenge. It will not stop after revenge. It stops by expressing friendliness.

If damage is the cause of hatred. It will not stop after retaliation. It stops by expressing kindness.

May pain be a cause for searching wisdom.

May damage be a cause for searching goodness.

For wisdom is the eternal source of peace.

And goodness is the eternal source of welfare.

Give to others what you want to retrieve.

Give peace as you want peace.

Give goodness as you want goodness.

If reason is telling you to kill, wound, or damage.

Tell your reason to heal, give life, and repair.

If your reason tells you that others are not of any worth.

Tell your reason that all are equal, all have right of living.

If your reason says to you. You earn to be rich, famous.

Tell it richness divided over all living beings give richness in happiness

And fame used to show good values and laws is the source of society.

Symbols

On earth we humans live our lives in servitude of symbols.

We as Christians. We are praying to Christ. Being a symbol of the past religions.

We as Hindus. We are devoted to Vishnu, Krsna or other gods. They are symbols of old spirituality.

We as loving enlightenment, are knowing that the source of it was Buddha.

All are symbols, long ago they lived. And died. But they left their message for us to study.

They had a certain wisdom. In which way the people in these times regard as important.

Symbols of these times. Are for example the brand of clothes you buy and wear.

The food that's giving us energy.

Symbols in the plantlife are all plants having names according to medicines.

Maybe not even having such an effect.

But we all know such symbols. And we all know that if we follow a symbol, we get more peace, more property or more fame.

Language, a symbol too. But it's with the mutual understanding that is based in our childhood.

If as children you wouldn't learn language. What would be the communication like.

Communication is a language of symbols. Be it in words, in stories, or in gestures.

May life in your eyes become a symbol of harmony and peace.

May life in your soul become a symbol of truth and wisdom.

May life in your body become a symbol of good health and longevity.

May society be a symbol of peace. For both inner and outer realms.

May society be a symbol of protections. For all weak and damaged creatures.

May society be a symbol of wisdom. Creating life. Abundant life.

pearls and diamonds

does anyone know how pearls are grown.

Does anyone know how diamonds are crushed.

Pearls are a fruit of oysters.

Diamonds are a past tool of civilisation crushed to stone.

Pearls, grown by the pain of the shellfish gives its beauty when discovered.

Diamonds, pushed down after burial of heroes, gives after long time its precious value.

May pearls of civilisation. Be made by the effort and pain of wise men, prophets, holy people.

May diamonds of civilisation. Be made by the legacy of old sages.

Pearls. Hopefully we find them and make use of them. It gives the owner much joy until he spends it for his living.

Diamonds. It is loved at the necks of ladies. It is loved until it spends to give joy to the owner.

Pearls. If you don't search for them. you cannot find them.

Because those who search, are diving to depths unknown to others.

Diamonds. If you do not like them, you don't know how much effort it takes to find or buy one diamond. Because they laid for thousands of years in the earth, waiting for someone making profit of it.

If you want a peaceful life. Do not search for pearls or diamonds. Because those high in hierarchy own pearls and diamonds. And what they do as living, is fighting for more.

Greediness is in the eye of the owner.

Of you do not own such things. They will not fight you for it.

May the pearl of consciousness shine in your eyes instead.

May the diamond of virtues reflect all sins instead.

Weather in science

All inventors. May they receive respect.

Because they gave us the goodness of good health, good shelter, good food.

All inventors. May they be regarded for their effort.

Because. Sickness is diminished, houses hold in weather, food is without source of disease.

If inventors, are discovering tools for living.

They can have good intentions, of healing society or bringing harmony.

Or they have bad intentions. Being superior in war, or being a survivor.

But the intention is not what's most important.

Because tools for war. can be used for peace.

And tools for peace can be used for war.

It's the weather which decides. Is it time for peace then all inventions are used for prosperity.

If the weather calls for war. All tools for peace are changed to those for war.

But not any human asks. Is it good that weather decides what time it is.

Not any person says. Oh let the weather be good for long times.

Not any person asks. Why is it time for war. is there no need for peace.

May the weather be as what's good for the universe.

Because if we compare to our atmosphere.

The sun is to grow the fields with plants.

Giving animals their need for replication.

And winter for being a border for little life forms.

May life be of worth. And the weather be a blessing for us.
We can call the weather, be it war or peace. A source of reason.
A source of our plans. Our expectations. Our mind.

gold and silver

Gold shines as the sun.

Silver reflects light like the moon.

The two sources of natural light, represented in metal.

The two kinds of worth, represented in scarcity and importance.

May Gold shine as the Sun.

May Silver shines as what is moon.

May gold be the gift i give to those i love.

May silver be the gift i give to those who are my friends.

May metal be the source of life. As giving us means to defend, protect and lead.

May metal be the purpose of life. Giving us a purpose of working for.

May metal be the tool to make our living easier and more acceptable.

If we desire gold, let it be without pullback for others.

If we desire silver, let it be without damage for those below our ranks.

May gold be the purpose of those valueing treasuries.

May silver be the purpose of peace in good times.

Gold as it has value. It is the source of all conflicts.

Silver as it has value. Is the source of shelter and food.

May gold be without damage.

May silver be without wounds.

May life be valued not in gold or silver.

But in the gold of experience. Happiness.

But in the silver of experience. Being wise words.

If gold would disappear. There would be no wealth.

If silver would disappear. There would be no fame nor glory.

Everyone would be equal in rank.

Everyone would earn the same reward.

May gold be without value.

May silver be without value.

Because the symbol of gold. makes thieves and criminals.

Because the symbol of silver. Makes poverty and handicapped people.

My palace

As someone around 3000 years ago told.
Make yourself a palace.
A palace full of treasuries.
A palace full of gold, silver and gemstones.
A thousand years later,
A little man, was thinking it over.
And said. No a treasury is not in gold, in silver.
Because when you die. you leave it on the earth.
Even when its buried besides you. its no use for the time after
your life.
Maybe there is use for other things after life.
And he was reading scriptures. of the major religions in those
times.
He was reading, and found a description of heaven, and of how
you can get a ticket to that place.
He read, that all wise men, heroes, and good people own a
place in that beautifull country.
So he thought it over and came with the reason.
If as a human you can realize a position of a good person, hero
or wise man then its a good life.
So he told the people in his time to:
Either help poor people, because wisemen heal and bless those
without help.
Either be a hero and save a country or people.
Either be a good man.
That was the basis of what he told. And he had a lot of
followers teaching for example kings of
being good and building a palace, not in gold and silver. But in
the gold of human. But in the silver of living.
Building palaces by giving away for charity.

Building palaces by giving away for the need of the poor and
very sick.
That wiseman who was the origin, is still known.
Some call him Jesus, Some call him Buddha.
Did he have a name?
No such an invention or discovery is made, once in some time.
With the name of the one discovering it.
Was it a god, giving such a discovery,
Was it reason or thought, creating such a chance.
Was it pure intuition, being found by compassion.

Royal elite

We all know the people very rich, very wealthy.

Living of golden plates, diamond homes, and pearl cutlery.

We all know sometimes a royal or rich person comes in the news.

Doing something great, or something infamous.

They are protected by their status.

They are protected by their rank.

If they whisper; there should be war. It is reality.

If they whisper; very ill people should be treated. It is reality.

If they whisper; cast out the poor and fugitive. It is reality.

May those important persons. Because of their rank. Choose to sell their status.

May those important persons. Because of their rank. Make an ear for what is demanded in society.

Fulfilling the wishes of those without hope, without expectance.

The people very rich, very wealthy.

If every person on earth gets an estimation on how good they live.

If amount of money is leading in the estimation the very rich would have high ranking.

If quality of happiness is leading in the estimation; those giving for charity will have high ranking.

If quality of society is leading. All inventors, All heroes who offer their best for free get high ranking.

So if you want to either have a high rank in money: Then become rich, become famous, become a royal.

So if you want to either have a high rank in happiness: Then give for charity and volunteering.

And third is: Invent your life to be of use for society. Because every measure is in relation to society.

Let those royal elite be. If they are not happy. its their choice.
They have enough advisors.
Even advising them to give for charity or care for society.
Let those royal elite be. Because if you fight them. its a snap of
a finger to let you vanish of the scene.
Let those royal elite be. Peace of government. One hand is the
democratic counsel, Second hand is the scepter of the king.
If you want happiness in your life.
Than end a life of comparing with those living around you.
End a life of comparing with persons of equal rank.
Start living and choose yourself as purpose for all you have in
life.
But let it be with peace. Let it be with reason for society.
If you are not happy.
A cause can be egotism.
A cause can be a lack of compassion.
A cause can be a miscalculation in money.

syndicate of consumption

In these times, all groups of labour.

All labourjobs are gathered in guilds.

Name them syndicates.

They represent the rights and plights of a certain jobexpertise.

But a new theme of representation is

a syndicate of consumption.

Giving companies a guideline of what objects may cost,

or what price is normal.

People say its not necessary. Or its a waste of time.

But it can be handy.

A simple rule resulting from a syndicate of consumption is

a basic rule of requirement.

Giving the most required objects. be it bread or water a price of minimality.

So everyone, be it rich, be it poor can have access to it.

A second rule can be giving objects without requirement of

basic living, for example for luxury,

Art or Cultural things a price higher than normal. because its

not a basicall need to be able to live a healthy life.

A syndicate of consumption, could also choose to make a law

of

what is damaging our earth, and raising the price of it, to

compensate for the damage it causes.

Its a little example of what such a guild can be.

And if it has a legal status. What use can it have.

(giving the syndicate equal representation in people.

Gem

Gems. as soon you say you got one,
others are interested.
either where you found them, or how it looks.
If you say you have a diamond. They all are jealous.
Except the wise ones, who know that prosperity is not being
caused by finding gems, or winning lotteries.
Diamonds. When you find one. You have temporarily wealth.
But with the growth of your wealth comes the growth of your
spending.
So real wealth, comes from being disciplined.
Real wealth comes from wise choices with your properties.
If you win a lottery? There always will be people being jealous
and saying they deserved it better.
Or they say you are gaining wealth at cost of other (poor) ones.
Choose to find the gem of real worth.
A happy life, A good health, food and shelter.
And not with great wealth. But with being content as you
retrieve your position and
with what is given to you.
Is not the desire that makes someone happy,
But its the contentment which makes happy.
Being content, with no desires. Is most likely the source of a
good and happy life.

Sexuality

Human specie. Human Mankind. Human race.

Homo Sapiens. Homo Intellectus.

Our humanity exists because of creation of offspring.

Giving humans the need to replicate.

Giving humans the need to be in relation.

Giving humans the need for friendship.

Some religions tell us.

That celibacy is a source of creativity.

That Chastity is a source of virtues.

Is it a source because there is no need for mating-behaviour.

Is it a source because there is no thought drawing away attention.

Religion, would be a source of celibacy.

Religion, would be a source of chastity.

But humans being celibates. Not always they are respected or are regarded well.

But humans being called celibates, not always behaved up to their imago of celibates.

In church there has been news of monks or priests not being so lawful.

A celibate is someone not having behaviour. Behaviour of intimate or sexual friendship towards other people. being from male of female kind.

Sometimes they say its a sublimation of feelings. Being attended towards religion. instead of relationship.

Artificiality

Will Intelligence have rights?

Will Intelligence have needs?

Even when it would be artificial?

Will human rights be applicable to artificial humans?

If robotics would create humanlike bodies.

Would it cause feelings of protection or value in real humans.

If robotics would create humanlike bodies.

Would they be in war more appreciated than humans?

If robotics could create humans,

Is it possible that they replace humans.

If Intelligence would be human,

Is it source for human law.

If intelligence is artificial but humanlike,

Is it source for human law?

Do humans, always have the right of respectful treatment?

Also when humans are artificially cloned.

Do clones have human rights.

Do clones have human worth?

Artificial, Does it feel pain or pleasure. Does it experience happiness or misery?

Would they be bound to the level of communication we would program to have?

Would they have feelings beyond the level of experience we build into them?

Would artificial life exist?

Animals

Animal, do they think.

Animals, Are they conscious.

Animals, are they logical beings.

Is it logical to fight over Territory.

Is it logical to flee from stronger enemies.

Is it logical to search for food.

Is it logical to raise offspring.

Animals are they logical acting?

Logical without thinking?

What do humans do?

Is it logical to eat and search for food?

Is it logical to flee from war and aggression?

Is it logical to work for money and spend it on shelter, food and culture?

Are humans logical beings?

why do we tell our children that animals are lower beings.

Not worthy of getting treated well.

At least when they are not pets of us.

What do we tell children, about the meat we eat.

About the shoes we have.

Leather, Meat, other animal tissues.

What do we tell our children.

Do the animals we use, have suffered for our need.

Animals, if they could think. Would they be able to speak the language we understand.

Animals, if they would be aware of their reality. Would we recognize that and treat them good.

Animals.

Make it possible.

Treat all conscious beings with compassion.

Animals.

Make it possible.

Make a fist for animals rights.

Make a fist for better treatment, be it pets or for industry.

Time erases

Our time, is a big monster eating everything that happens.

Our time, is a big monster eating all beings. that lives.

May time, as being our existance, give us good days.

May the bad days be less than the good days.

If time would be a color.

Would it be blue or green when peace is current.

Would it be black when war and famine are on the world.

Would it be white or yellow when a heaven on earth would exist.

Time being a movie, what title does it have.

Is it named with the name of the individual who is at the screen of life.

Time being a movie. Would it be named by the theme of the living.

Time being a short or long time. would its length be defined by seconds, years, or undefined.

Time if it would be the same for very being.

Would a fly live short, and an elephant live long.

Would time be short for a virus and long for a longliving tree.

Time. Its characteristics are named by every conscious beings.

But is it named with words. to be communicated to other beings.

Will it be named with other means of communicating.

And will it then change the interpretation of living beings, when getting better definition by communication.

Time. In egypt it was the snake biting its tail.

time. In rome it was the every living power.

Time. In babylon it was the tower of all nations. Talking the same language.

Time. In europe it was as the farmer ploughing its field.

Getting both good and bad fruits.

Time. In religion a source of observation.

Time. In culture a tradition of those old ones knowing ways to live happily.

Time. As a discovery giving each moment new color, new taste, new existence.

Erasing of what has been.

Erasing of what yet will come.

Erasing what we already experienced.

Erasure. And giving us peace. peace of forgetting what was. and forgetting of what will be.

Intelligent Species

What is intelligence.

What is a definition of a specie.

What is life.

Is life a source of effort or labour.

May life be ever protected when it is a value or positive result for the universe.

What gives life, the ability to be conscious.

What gives life, the ability to communicate.

If there would be rules by which intelligent species live, act, exist.

What would be those rules.

Is it as treating life forms lower than yourself as animals.

Is it treating life forms higher than ourselves as enemies. Trying to destroy them.

A couple of rules would be.

If we understand their communication.

Trying to convince those life forms of being non-aggressive, friendly, peacefully.

Trying to be a border for damage and destruction.

Life forms, higher than ourselves.

We would be victims of their games.

If their games would be sourced by predatorbehaviour,

We would not survive.

If their games would be influenced by compassion or altruism

There would be chance for a good exchange of abilities, forces.

As we see in our past. We as humans did not behave quite friendly.

As we treated indians. As we treated other human races.

We are ourselves not very compassionate.

Also because of our religions.

Today being source for the islam to their aggressive behaviour.

Light Source

If you look with your eyes to the sun.

They say you get blind.

A source of light is when to bright a source of damage.

A source of light when not bright enough is a source of bad coordination.

Each source of light giving us visibility to coordinate our movements.

Is as shaped with purpose to create ability.

The sun, in our past, was far more bright.

Giving another planet the ability to create life forms with intelligence.

That planet, some name it mars, some name it bitnom.

Mars, was having intelligent life forms.

But those life forms, where not fit for times with no moderate climate.

When mars had no good atmosphere anymore. The living creatures died.

The same happened on earth, with the extinction of the dinosaurs.

If mars was having living beings. What would they look like.

Were they as martians or skilled persons in martial arts would be.

An instrument of war and aggression.

Would they be victorious in their take-over of other planets.

There are no martians. There are no other life forms. In this sunsphere or others.

That is what logic says when we would never had signs of intelligence on our planet.

Martial Arts. a form of fight by which the aggressor loses when not skilled in martial arts.

And the aggressor wins if skilled in martial arts.

May the Light source, of our planet.
Being the sun. give us prolonged time to live on our planet.
And make us prepared to meet or visit other planets.
And may our planet be protected by the Allmighty.
So i hope. So i pray.

Atlantis

The island of the scientists.

The island of the luxurious.

The island being protected by camouflage.

The island, as told being extincted.

But that island, in our myths is a country with great technology.

An Island full of the most expensive inventions.

They would run on magnetism and water artificiality.

That island because of its immorality would have been brought to sunk by an angel.

But is that true?

Is it true that between greenland and the antartic an island was existing. With not only green land but with great possibility to live on.

The angel, did He sink the island, or did the earth move counter clockwise so the surface would freeze.

Maybe in the future archeologists could look below the ice, to discover material belonging to a past civilisation.

May greenland be found.

May greenland show its secrets.

Atlantis.

An island. Magnetic to those loving technology.

Atlantis.

An island. As a stream of riches by water.

Mermaid

In the long past ago,

There was a myth about beings, living creatures, living in the sea.

That kind of specie was as being partly human partly fish.

Children sometimes fantasyze about such a being.

They would be very kind and friendly.

As living in the sea or ocean they would be hidden from normal sight of humans.

They would be partly human, because the upper part of their bodies would be humanlike.

With heads and arms as we have.

And the lower part being a tail and part of a fish. Maybe like a dolphin.

See mermaids. They would be the peacekeepers of our society.

See mermaids. They would be hidden, and only appear when special spiritual occasions take place.

May the mermaids, if they exist, keep being safe.

Because when we would find them in these days. They would not be safe.

They would be analysed on the surgeon's table. And not have a pleasant life.

Mermaids. Let them be fairy tales with a nice feeling.

Let them be a source for children to learn to have respect for other life-forms.

Aliens

Our world has a lot of creatures. Species being discovered by us.

Our world has in for example deep oceans life that we do not know.

In the air there lives a large group of creatures we not know.

Little ones as big as viruses.

Bigger ones as big as bacteria.

And if we fantasize bigger creatures being invisible.

Even spirits could or would be invisible because they have no physical body.

We know there are lacks in our knowledge.

And as we live in these times, we see our history through the eyes of the scientists who describe and write about it.

The invention of soap, which was for centuries ridiculed is an example of an invention not very logical in those times.

As we can give it a name, be it influence of higher spirits, greater powers giving us a favor.

Some people would say, there can be nothing without intelligence giving such things to our world.

For example the invention of fire. Giving the source of heat and cooking to our mankind.

Are those discoveries really effort of a little group of humans.

It's in my belief that the source is neither human, neither godly.

Maybe godly but not our known religions.

I name those influences on good science being sourced by 'aliens'

Maybe that alien source is long present influence.

Maybe it's the influence of a society guard of beings we not know, except on what they show to us.

time

Time meets eternity at the present moment.

Each moment is as a granule of sand.

Making a beach when looked at far.

And being little specks when looked at from nearby.

The time flows as a river through time.

The time is as a movie being projected each moment after another.

If time flies by to slow, its caused by misery.

If time flies by to fast its caused by happiness.

The actor is influenced by what happens.

The actor learns to behave well when effort and attention is done to polish the sculpture.

May our living be a blessing to the society we belong to.

May our life, be as a pearl on a string. Being nice to look at, and to wonder what source it has.

May the time be as a wise advisor to all living beings. Giving them way to exist in a peacefull way.

If time would stop. Noone would be able to tell what reality we are in.

If time would loose its characteristics noone would know what moment or day in time its.

dependency

The whole earth, and even the cosmos is dependent on every little part of it.

Animals create nature. Plants make from minerals living tissue. And mankind makes civilisation and uses natural resources to create

intelligent machines.

If animals wouldn't exist. The earth would not be so pleasant to live on.

If plantlife would not exist. We wouldn't have food, and within time no resources anymore.

If we respect mother nature. And regenerate what we use.

Then we will keep being blessed with the natural resources.

If nature is not regarded by us. It will begin to be our enemy.

We think she is without intelligent core.

But we think wrong.

If we waste too much, She will waste us.

We are responsible. May we treat others, being human, animal or other right.

To keep being place in this whole universe and reality.

If we choose to damage our surrounding. What use do we have if it is destroyed.

Its easier to regenerate while its still not completely gone.

When we used our resources full, and leaving nothing anymore on earth.

It will be hard to grow a new world. Because it lacks all basics needed for it.

Dependency is dependent on the parts of it.

If we are part of it. Let us respect the parts we not are ourselves. the parts we see or feel, and the parts not visible to us.

May we untill far future be blessed with good natural sources.
May we untull far future be blessed with abundant earth. with
abundant life species on it.

certainty

Is certainty a value worth of basing your presumptions on.

Is it certain a rule is applicable to all cases.

Is it certain that discoveries are useable in all situations.

As humans we can discover all kind of things.

But its uncovered by precise observation.

Uncovered by a smart person.

Certain is that life ends in death.

Certain is that when man and wife are one, create one.

Certain is that when life is good, its giving happiness.

Certain is that causing damage gives greater chance of getting damage.

Certain is using laws to restrict bad behaviour gives more peace.

Certain is giving laws to a society lets welfare grow.

Certain. Is not a simple word. Because its valued by all people.

And every person has a different valuesystem.

Is there one goal that everyone hopes to fullfill in life.

IS it good health. There are people taking wounds as a cost for getting other goals.

Is it suffering. Some people take suffering to aspire for goals.

All values are different in different people.

The only similarity is that persons see advantage in their goal's fullfilment.

The only similarity in life is change.

The only similarity in life is experience.

The only similarity is you grow older when time steps on the road.

sentience

What is our existence without being able to see, feel, hear.

What is our existence without being able to move limbs,
coordinate movements.

What is our existence without the ability to acquire goals.

Accession. To life.

Accession. To observation.

Accession to willpower.

Life is only worth living if moments of contentness, or
happiness are a certain part of life.

Giving the experiencer the reason to live on.

May life be worthy to live.

But sometimes its not pleasant to live.

When you have pain not curable.

When you suffer not being able to withstand.

When you are hated and despised.

Some say a certain fate can be turned to a good one by:

Praying, being Altruistic, being friendly.

But in society its not always reasonable what happens.

Sometimes there is doom in life without escape.

May the good and rich and famous turn their excess to them.

To be helpfull for those not able to be helped or able to help
themselves.

Life, is a question for value.

In the end everyone asks the question, what use was my life.

Did i add value to society.

Am i being loved.

Or am i forgotten or rejected.

If the total sum of your deeds is of positive worth for society.

You may feel content. Because its of use for the future.

If the total sum of your deeds is of negative worth for society.
You can ask yourself what use is life when its worse than
before.

Its never to late to start a good life.

Its never to late to turn the ship and fare to good haven.

Its never to late to stop haunting and start helping.

Its never to late to stop destroying and start building.

Its never to late to stop wounding and start healing.

Its the choice in your heart that starts either a good or bad life.

Its the choice in your heart, as a seed growing to a tree of good
or bad deeds.

And fruits of good life taste sweet to each eater. But fruits of
bad life,

is bitter, and not loved.

If there is happiness in life.

Search and discover the source.

and keep it in your property.

If there is happiness in life.

Search and discover the source.

And share it with all who desires for it.

labor

is there a goal without labor being worthy to strive for.

Is there a purpose of live without being usefull in providing effort for society.

Labour.

It is hated when you do what is not your heart's liking.

It is hated when you cannot provide you and your family for basic needs.

It is hated when its an infamous job.

It is hated when health is damaged.

It is hated when you are bullied in it.

Labour

It is loved when you are doing what your heart tells you.

It is loved when you can provide for basic needs and luxury in your family

It is loved when your job is regarded good.

It is loved when you and your family grow in health.

It is loved when you are esteemed high.

Labour.

Its not good fighting for certain jobs.

Its not good fighting for certain payment. Except if you don't have enough to provide your basic needs.

Labour.

Help yourself. And Help others.

Help others educate to get their wanted jobs.

Help others provide for basic needs.

Labour,

Your offspring will bless you when you give them a happy youth.

Your offspring will bless you, when you have time for them to be in their life as a supportive and protective person.

Labour,

Share your experience and wisdom with the ones who ask for.

Share your experience in your old days with those in their
young days.

Labour,

Be a good person. and learn about ethics.

Be a good person. Learn about moral values.

Be a good person. Learn to bless.

Advantage

Is there benefit in bad purposes.

Is there benefit in badness.

Is there benefit in War and fights.

Is there benefit in aggression

Benefit for one, for a couple. But not many are happy with it.

Benefit for the largest group on the longest period.

Benefit for the greatest amount of people, for the greatest length in time.

Happiness.

Is it good to deprive many people of health or social status to give one person luxury.

Is it better to own luxury, or to discard it.

Is it better to have much pleasure, or to live sober.

Is it better to aim for shorttime luck, or to aim for longlasting peace.

Is it better to be rich,

Is it better to be wealthy.

Is it better to be poor,

Is it better to be sick.

Is it better to live during daylight.

Or to live in night times.

Richness is found in sharing.

Fame is found in being supportive.

Richness is not found in much gold.

Fame is not found in advertising beauty.

Richness is not found in lotteries or gambling.

Fame is not found in benefitting special attributes.

May Fame be used for giving a rolemodel of good values to young and simple people.

May Richness be used for giving society a safety net.

Is it better to be rich or poor.

It depends on how many people you make happy.

It depends on how great peace you realize.

Advantage is in how you are an advantage to society.

Advantage is in how great your advantage is to other people.

For the importance is in how you are experienced by others.

wise

Wise is pointing to goodness

Wise is pointing the wounded to healthcare

Wise is pointing the poor to ways of gain

Wise is pointing to harmony

Wise is pointing all to society's importance.

Wise is pointing criminals to law.

Wise is a person when being wounded goes to healthcare without a drawback for society.

Wise is a person when being poor uses ways without being a danger for society.

Wise is a person when being a criminal, searches for a way of revenge without breaking laws.

Wise is a person when being hunted for, uses means without hunting others.

Wisdom, is a word giving existence a new purpose.

Wisdom, is a word giving people a collective goal.

Wisdom, is a word giving significance to experience.

Wisdom, is a word giving way to a life of searching.

Wisdom, is a word creating possibilities for happiness.

Wisdom. It begins with one question, one word.

Wisdom. It ends in harmony and welfare.

Wisdom. The ones being blessed with it, blesses others.

Wisdom. One person rules the world, may the wise be his advisors.

Wisdom. A few people rules the world, may it be in the hands of the wise.

Wisdom. Choose the values and standards wise.

Wisdom. Is it a necklace of silver or gold, wisdom has higher value than that.

Wisdom. Is it a ring of diamonds and platinum, wisdom is even more worthy of owning.

May the wise be in prosper society.

May the wise be in welfare.

May the wise be in good health.

For growth is by the smart and wise ones.

Smart people invent technology giving easyness and luxery for a price.

Wise people give the laws and rules to give every one equal rights and equal respect.

riches and fame

When everyone have the aim for wealth, all regard gold, silver and diamonds as the top to be owned.

Then the price goes up, and only a happy few have access to it.

When everyone have the aim for the top jobs, it will have a reward as high as there are competitors having appreciation for it.

When everyone wants the best friendship. Its a fight to get it.

So when you want happiness.

Don't participate in the game of wealth and beauty. In the game of Fame and Gold.

If the game is on, every one runs without looking for the best chance.

They only run for the chance that is advocated and made visible.

A purpose of living is not being wealthy in money, but being wealthy in being a blessing for society.

A purpose of living is not striving for the best job in ranks, but the best job in being a pillar society.

equality

Equality is when benefits are gifted to all in the same way.

Equality is only good when the subjects get the most chance on equal reward.

Equality in the chance to get diseases. Is the source of healthcare with collective compensation.

Equality. When you are the top up person you don't think of equality.

But when you are the down low person you make effort of getting equal chances and rewards.

When equality is in the government, giving each person same possibilities. A country will care for society without expelling anyone.

When equal rights are visible and gifted to all of countries members all will be happy.

when equality means equal reward for might or pride and low rewards for everyone else,

sooner or later a revolution will try to restore the balance.

Equality, Means giving al chances to reach perfection or expertise.

Equality does not mean everyone has the same job, the same property.

Equality, for all of society is a reason to help and be altruistic.

Equality in color is not whole black, but is visible harmony.

In color and shape.

Equality in music, is not one tone for longer time,

But giving listeners a good sound, with symphony and a calm melody.

Equality in labor is as giving each laborer the same reward for work done good.

Equality in friendship is.

Everyone being healthy and social being befriended.

Equality is a word that has only significance in the explanation by them who uses the word.

guesses

guess in the casino, and loose your money

guess in the court and loose your law suit

guess in life and you will fail.

Knowledge comes from understanding

Knowledge comes from observation

Knowledge is a result of communication.

Knowledge is in the eye of the gifted one.

Is there truth in lies.

Is there truth in humor.

Is there truth in existance.

If all effort fails,

The work will deprive.

If all effort fails,

The living creatures wil stop trying.

When life hurts,

The people go and search for healing and a solution.

When life hurts,

The ones, being hurt are looking for help.

As long as life is happy and without suffering,

You have no vision on the suffering of others.

Because for your own suffering you understand what others might feel.

The life of a good person is from blessing to another.

with the blessing being to care and help the lost ones.

May life give its secret.

May existance give its happiness.

A good guess gives temporal benefit. But work and research gives a long lasting benefit.

Because its not a little luck that causes it but the work and study thats replicatable.

Do not aspire for luck or chances without stable cause,
Because in times of need its not there as an option.
Guess in life,
And a life will guess on you.
Guess on education
Will not give the grades being aimed for.
Guess on friendship.
Hopefully the friendship lasts as long as the guesser wants.

Orange Line

By Bastiaan Oostendorp

Useless life

Do you feel your life is not worth what you would like.
Is life a unhappy living.
If you would like to have a life full of good things.
There is a way of transforming your life from bad to good.
from unhappy to happy.
And from useless to full of good things.
The only thing you need is to surrender to the Almighty.
You will experience for yourself what will happen next.

Getting power

In a not so distant future there will be a person,
a leader of our race. He leads us through hardship to peace.
He leads by giving everyone good chances and equality.
His force is not a intellectual one.
He leads us by having His own source being realised.
His force is daily replenished by his effort to do everything the
right way.
His secret is he prays to His god, the unnameable source of
humanity.
He prays to the source and creating power which created our
race.
His power is daily influenced by that source.
Asking an talking with that source of humanity.
To get strong and wise.

Open force

In this world we know the definition of open source.

Applications that can be used and modified for free. And the programmers did effort to make a good application.

Sometimes better than the paid alternatives.

Open force is a definition of a kind of force field, giving good vibes in the air.

It works like a rainbow in a dry climate.

It is made by having three objects.

One is a plate of 15×15 cm

Second is a piece of pipe with a radius of 10 cm and a length of 20 cm

and third is a bundle of wire of 15 to 20m

To construct. put the plate on one side of the pipe so it is like a mug or basket.

Then attach the wire on both ends to the improvised mug.

And then lay the wire around a room so it is like a square of several meters.

The pipe can be filled with water. Just normal water. When the water evaporates it can be filled with fresh water again.

The basket with wire can be of copper or brass (koper or messing called in dutch)

The radioatmosphere will be healed and improved.

Good luck and be blessed.

The more people do such a device, the world will be improved.

Imagine all over the world a kind of electric rainbows.

Religion and respect

We see in some religions that there is war against those who don't believe or are pagans.

As far as i can see is the religious god being defended, not clear in that he wants it that way.

Killing or wounding to protect a god is not very humane.

Asking for respect towards a god is a democratic process of debate.

As a devotee you can ask for respect.

But not for the dead of those who attack your gods.

If you are not sure about it; ask your god to give you a message.

Or let your god protect Himself.

Then if he is into defending Himself by killing it will be sure be seen by everyone. and will be as a thunder in blue sky.

Chance for wealth

There is a way to get the chances for succes in life.
I saw lastly a documentary of someone who was in childhood
poor. But he got a book about yantra's
to be precise a sri chakra yantra.
He had it as an art object on the wall.
And he as he said himself in the documentary got rich and
succesfull.
See the yantra below for the one he had.

earth & human

We humans have a physical body.

Legs, arms, head and chest.

We have arteries for blood transport.

An immune system which stops infiltrators and bad bacteria.

As we look to earth it has a same kind of system.

The arteries are the highways and roads.

The immune system is the police and military power.

The transport of oxygen is the warehousing delivering goods to stores.

the muscles in our body are the companies on earth.

As above so below.

The system is compared to humans or other life forms.

Same kind of groups with functions.

farmers land

Farmers and other field workers have each year a new plantation on their land.

And to keep it fertile they use artificial fertilizer.

It's not very good, after a number of years the land loses its nutrients.

Best is to keep the land once in 30 years for 3 years without crops or useful plantation.

Let the weeds grow and restore the ground and earth.

language

language is a system of symbols formed into sound and appearance.

symbols have a couple of features.

One is the quantity. saying how much you have.

An military army is counted in a number. that number is the quantity.

if you buy food, you buy a number of vegetables or other stuff

The second feature is quality.

it describes how it looks, feels, appears.

it tells different things about what you have.

the quality is the appearance and describes characteristics.

the third feature is the intrinsic value.

The value it has, if it would be not visible or countable.

it tells what is in source what it was.

a soldier, a number of them in a legion,

characteristic is a copper helmet and a sword.

intrinsic is that the purpose is to fight, and serve as protectors.

The fourth feature is the goal or purpose of it.

the purpose of protecting a statesmen or king for example.

Symbols have these four features.

connection at heart

We all know that people live with their heads and other with their hearts.

The head is the mind, giving you thoughts and knowledge about all things.

Giving you power to plan and interact at an intellectual way.

The people who live with their hearts.

Body and consciousness. They have a connection with the universe.

Giving them a signal which way to go, what to do.

An intuition gives instant knowledge.

A connection with the universe, giving guidance to life.

Giving guidance to your body,

With a purpose good for all society and moral values.

school of spheres

Comparison of spaces.

We live on a planet called earth. With life forms, plants, animals, humans.

We have a habitat for a lot of species.

The planet is like a person. with qualities and characteristics.

The planet is an individual participating in the universe as a creature.

Imagine that earth is an individual in a classroom on primary school.

The grade it has is life forms habitating the earth.

Higher grades, more intelligent life forms.

And a task for getting a grade is a certain level of realised things.

Able to travel long distances on space fusion.

Travelling time.

Using energy and transferring it without loss of effectiveness.

In the universal primary school.

We all are part of a certain level.

In the classroom its like a human person operates and acts.

And the questions are like have you already atomic energy. and the teacher learning the individual planets certain technologies.

Earth as a beautiful lady or girl in the class filled with planets. planets being highly rated by their technology or social structures in society.

Planets being low rated for the noneffective means to hold a society.

We are the internal planet of the external person, by the person being analogous to human life.

amber globe

A globe as an orb.

Made of amber and put in a tower at reasonable height.

And the amberorb is turning around its axis. At a good speed.

It creates energy, electricity or other and it give a harmonious frequency of signal.

The amber orb is used for civilizations to enlarge peace, and give a radio signal ground.

Magic

Magic, we know it as playtoys for children.

In a park for children all statues, scenery we see all nice things.

Magic, in earlier times it was believed it was available and used.

Magic is possible, try to have break in you mind, not thinking for a period.

If then after it the first thought is of a certain object or purpose its more likely to be happening in reality.

In the history on that kind of act all the magical items were created.

So by not thinking for a period, and after it one clear thought on a subject creates magic.

Magic without contract with bad forces or devils.

Some people by mindpower are able to do supernatural things.

Weed or usefull

We live in a civilised world.

With use of resources, regions for housing, industry.

Gardens, fields.

As human we understand that if we have a garden, we keep it
tide by removing weed.

Also when we have animals they are for our pleasure, food or
protection.

Everything unwanted gets removed.

With the saying as above as below we see that if something is
needless or causes damage we kill or remove it.

unless we see that in the future it will have a bigger benefit than
the damage done now.

If we as humans are a pain for the society we get busted in jail.

If we assume a creator of our human race. In religions.

We should be aware that creatures being usefull for the creator
get chances, help and good things.

And those hurting or needless for the creator will get hardship.

As we being weed or grain in the garden of the creator.

A good step for being usefull for the creator is asking him for
advice, a task, or his wishes.

Its called prayer.

If he exists, he will answer. His answer will be clear for you.

As i pray also to the Allmighty.

If you are usefull for the creator, he is more kind to you.

Because if you have an instrument or tool that you use you take
care of it.

Beginning to pray has no prerequisites. It has no requirement.

And you don't have to be holy for it. and the reason that only
the chosen ones may be religions is a lie.

If you start praying you are allowed for it.

If you are scared to have sinned and may not anymore pray or do good things.

Thats not a reason to not pray. When you start praying your sins will convert to good life. by being in prayer and expecting answers from the creator.

The saying that only jesus may confront the creator is false. We as humans all have the birthright to use prayer and devotion.

And we never loose that birthright.

If you want to test the goodness of the creator. Human laws, stated in countries laws, en all the good rules are applicable to you and everyone. Saying the creator wanted you to, is not an excuse for starting war or doing damage.

Crystal orb

The persons of gypsy kind have one job.

Reading the crystal orb for secrets about human life.

Prereading the future.

A crystal orb is the aftersubject of the medieval oracles.

In oracle language. its the spell of human behaviour.

the big life events being described.

Relationships with characteristics on body, psyche or coincidences.

The crystal orb can be made by chemical processes.

A orb round being filled with water.

And a undefined computer changing the water in condition.

A crystal orb Also by having a visualisation in front of a crystal.

Many ways to predict future things.

Oracles by asking mother earth for answers on life happenings.

a source of oracle is the sibylline scrolls

quantum communication

Quantum mechanics. a new field of exploration.

Having theme's like appearance, speed, perception.

Technology promising great uses.

One if it is having two quarks(quantum parts) changing condition on the same time.

one quark vibrates with a certain speed (frequency) and other quarks vibrates by cooptation. The vibration of the first causes the second.

If the quarks are in distance its a possible source of communication.

A source thats faster than light speed.

In that way communication over long distances are possible.

One planet to Other planets, with light years between them.

If its possible its the usage that proves good or bad.

Quanta communication and quantum computers. the main use as we can think of.

Another usage is using it to read all space on intelligent messages.

More advanced races of life beings will use quantum communication for their basical needs and work.

May our race join the international community, the interstellar community.

May we be blessed by instant transfer of message.

Cloning border

In these days we have new technology, scientists are experimenting with dna changes, dna modifications. They were able to clone the sheep dolly. but the steps of dna modification are more advanced now.

creating organs for people suffering organ depletion. and creating muscles. Looking in children for born in diseases. and lots of utils for it.

If we are able to clone and use the sperm to fertilize an egg. the step further is by using a human sperm with an animal egg.

Creating a crossbreed of life form.

If such a technology is going to exist. We cross an ethical border.

Choosing to let the human specie be intertwined with less intelligent beings.

It will be the border of good society. Having inferior beings.

What use will it have to create half human half animal. War purposes for strong fysical strength for body to body conflict?

The border which we cross is the border to combine human with animal dna, and have intelligent,life-able beings.

Aware the border will create misery. not little but big.

May the scientists be wise enough to avoid that kind of technology.

Oxygen, Air, Drawback

On earth above the surface is a layer made of air. air including oxygen.

What we don't know is that by a little change in the chemical condition.

All the air would explode. and each explosion gives the starting condition for additional explosions.

In only one hour all the air would explode.

Not for us a good thing. we would burn by the exploded air.

It's like a great fusion bomb, only without the control and benefits.

Air, we have to keep it safe, and technology giving such effects should be used carefully.

May our human specie not destroy what's our most needed material, oxygen and air.

Dimensional storage

We as our human specie are used nowadays to storing in chests, cupboards, other storage.

As countries we have central depots to store important things.

The illusionists have experimental knowledge about it.

A type of storage without visible appearance in our three dimensional world.

If they click it disappears, another click a large object appears.

Its a multidimensional space.

As example two boxes, overlapping each other. and with a tunnel being able to move an object from the first to the second box.

Multidimensional its like 10 boxes in the same space with tunnels covering it to have like doors in it.

if you want to store something you move the visible object through a tunnel to the other dimensional box.

And when you need it, you move it back from the second box to the first.

In more futuristic usage, the boxes can be opened and back retrieved on different locations.

Moving the tunnelstart from one position to another. from miles even.

A multidimensional system to store, save and ready use of what is needed.

the box theory is even applicable if their would be one more dimension.

Moving life species into other dimensions not only need space like objects but also oxygen and gravity. and its not proved that oxygen or gravity can be available there.

May the dimensional storage be used for peace-applications.

Electricity grid

Nowadays we have wires of copper into each room and space to give power to electric devices. and electricity gives the energy to let computers, machines etc. work.

In small electronic devices for example sticks and cards a chip is powered by the radio-energy in or near it.

rfid is powered by a radiofrequency of energy.

In the future our computers and lights are powered in the same way.

A energetic energetic field gives the energy. and all the devices need no copper wire but gets the energy out of the surrounding space.

And another secret, the human body is used as a radio antenna. but that is already known by scientists.

May our electric device be good to assist our living.

Energetic life forms

In a far galaxy there is intelligent life. only a difference is.

They are made of energy instead of physical material.

We have bodies consisting of water , earthly material etc.

But those life forms are made of energy.

consisting of some kind of magnetic or electromagnetic energy.

They are great intelligent. and a outer skin of them is made by force fields.

Putting out to out and keeping in whats in.

They are highly intelligent. think of a computer made of energy like light and with infinite computing power.

And then with artificial intelligence. and translate it to life form, intelligence and consciousness.

If they would communicate, they change gravity or small electronic fields

(our brains communicate also via little electronic pulses)

Interstellar travel

A day ago when i was looking a movie, i got an image of how interstellar travel in the future could be like.

When humans will travel for about more than 10 years to another planet. They can be held in stasis and while in stasis they look movies about important subjects.

According to their future job they will see movies about function and coping strategies.

some who become missionaries will see movies about saints, woodworkers about all woodcraft etc.

and those movies will have an interactive part. thus the subject can learn from the choices he makes.

the ship can be as large as wanted. only storing the soul, or the body.

When the ship arrives the movie will show information about the destination and wakes up all the humans.

ofcourse in the movieworld such a thing is already valid.

Alien communication

The movies talk loud about all kinds of extra-terrestrial life.

They would be angry, aggressive, or nice and friendly.

In movies we treat them sometimes befrienden, sometimes we war against them.

We don't know in reality what they look like, or act like.

We would behave uncommon if we would meet them for real.

If an alien would ring your door and asks for asylum would you accept him as a houseguest, or kick him into death.

We don't know if intelligent aliens already can read our communication devices, or hear the conversations we have near an electronic device.

If we as humans would like to be an ambassador for life capable of understanding lifesubjects (food, territory, toolcraft etc.)

We can just enter a message on our computer and send it over the internet by mail or by blog.

If aliens are intelligent and reading all our messages they certainly read that too.

And watch your steps for uncommon acts, its like being influenced by a spiritual being.

Some call it angels, Some call it guides. What do you give the force a name?

May the Allmighty bless us.

String of moments

Every life form, has consciousness. As a movie gives its visible screen in the string of moments.

If we as humans have a certain experience its in moments who pass after each other in front of our perception.

Our senses show us the reality we experience.

As humans the moments not pass by in moments by mathematical measure.

Its not a moment each tenth of a second, or even a moment each thousands of a second.

Its as a string of moments not giving each moment the same distance after the other.

If you watch a movie, more than one time, you see different things.

The repetition of what you see, if its a same content, gives you different information or different knowledge about what you perceive.

Like different elements from the movie is seen by addition views of the movie. You learn more by repetition. You learn more by choosing to let yourself be influenced.

Even if its the same information or vision.

In that idea of a string of moments. In humans lasting a lifetime. Other life forms do have strings of moments as well.

But we do not know how fast or how slow it happens in or on them.

What does influence the speed of the moments or the speed of change.

Is it earth or sun ruling the speed and the perception of moments.

Is it space giving moments a certain blackness or invisibility.

The moment is best lived in the moment it self. not avoiding it by thought or thinking.

The moment gives its knowledge or wisdom, they call it intuition.

The moment gives back energy to rest.

Childcare

It's popular to let your children be cared for by special companies.

They give your little child attention, from playing to eating, and resting.

As we have seen in history is the biggest drawback that parents don't treat their children friendly or doesn't meet with them at all.

If they lack in attention towards their children they have more emotions being on the dark side of personality.

A child without good attention grows aggressive or more evil in his emotions.

On the other side, the light side. Mothers, dads who care for their children giving unconditional love and positive feedback, have children also with harmonious personalities.

And caring for their life and those of their beloved ones.

Attention towards children, your children or others, give back the attention if good or lovely attention three fold in their future.

An adult with good youth, has more friendly feelings, and have more compassion.

Children can change the way how their parents treat them, by choosing themselves to be obedient and brave (if the parents are open for such behaviour)

Children, treat them like little angels and they become angels.

Children, treat them like little devils, and a criminal is born.

Children, meditate on their nurture and train good persons.

Debt is normal

We all are in debt, according to religion, christianity, we have our inborn sin. We have a debt on our karma.

We are in debt, by the houses we bought with mortgage.

Companies we have are in debt, by the shares they sell.

Countries are in debt by the bonds they sell out.

The world is at total debt towards the natural resources of our planets.

We have a debt that is called normal, or healthy.

But it's not normal and not healthy.

It's best to only spend the money you have.

And to pay taxes which is not spent at interest on bonds.

And to buy products of companies not in debt by their shares or bonds.

It's the time we are in debt. the debt of our intelligence not understanding what debt really is.

It's an obligation towards those we loan from.

It's an obligation which can be used against us.

A recent example. The debt of Greece, not anymore able to pay certain government costs.

The result, internationally they are asked to sell all collective companies serving the country.

By obligation of their loans they are forced to change government, or change politics.

A debt is an obligation to follow the advices of those who lent you the money.

Debt gives the power into the hands of those not intentionally having the good intentions for that ruling group.

Doctrination

Every person on this earth has social contact with some or more other human beings.

Communication about food, housing, culture and other subjects.

We in the wealthy part of the world have other information sources as well.

The television, radio, computer.

On television everyone gets the same kind of information. And by movies or tv series we see behaviour that is most likely for humans to be interesting.

Because of tv we know how to have intimacy towards others, how to make war or verbal fights.

How to behave in situations.

We by television know how to have relations.

Its an easy step towards a bad kind of society if television and computers (internet) is used to push our personalities in a criminal way.

If we are in doctriated. We have no choice how to avoid it. If computers and televisions are obliged to see or watch, or interact with.

What choice do we have if we are the subjects being manipulated by what we see or interact with on television or computer.

A good example is the war the past decades. Information being told or broadcasted is source of ethnical differences, traditions or culture which is weaker or put in the bad kind of society.

There is only one hitler needed to give the whole of society a bad direction and a devastating time.

Is democracy really democratic? If our media (television, computer) is influenced by a certain group of influential people.

Not that there will be a hitler. But its mostly the wrong person on the wrong time who causes the wrong period in history.

Healing sound

There is a sound consisting of three tones that will heal all the creatures who are air breathing.

As we see today there are a lot of music themes.

Some are pointing to black sources for example black metal, hard rock.

And some are pointing towards beauty in voice. name the singers of dance or opera.

In religion we see the use of music too. In islam you can hear the songs of war,

the songs giving the hearers a urge to fight for a purpose laid in the songs.

In christianity also music is used to give those with faith feelings that give way to their religion.

What is known is that music gives the listener a certain feeling, and that feeling is shared by fans of the same music.

In the past, the time of classical music, musicians like beethoven and mozart not only made music to have easy listening but also giving a certain feeling.

Not some feeling not known of while designing the song.

The moon sonata from beethoven would have a good influence on people with psychic illness.

If you start searching for the purpose and effect of music. You can learn a lot.

Its the same with the experiment of emoto, a japanese scientist investigating the effect of music and thought on water crystals. harmonious music gave nice crystals, chaotic music gave rubbish crystals.

Certain outerspace species use sound (combined tones) to let creatures fall asleep or to erase shorttime memory.

When they are on mission, they come with a ufo near the spot they have to be, sound the tone. The creatures including

humans fall asleep.

They fulfill their mission, and another tone wakes everything up. and the living beings think oh i was temporarily asleep. oh thats not bad.

Gravity.

We all know our current educational books about physics.

One chapter is about gravity.

Gravity pulling all that exists on our planet towards or throughout the ground.

Everything keeps in place.

Things on their surface, and air and atmosphere around us.

What is gravity, is it a wave of particles, is it a wave of energy.

We know that magnetism is being caused by metal or some material consisting of it.

Magnetism we know we can use it for our machines and computers.

Is gravity also made or caused by a material maybe similar to metal and magnetism.

Is gravity made by a material deep in the core of our planet.

We cannot be sure until it would be proven by scientists.

If gravity would somewhere on earth be less or absent, it would give big disasters of materials flowing from one side of the planet to another side.

And all the surface of the earth would move and create mountains of stone and liquid gasses.

In the core there must be a source for the gravity which is a homogenous kind of material around the globe in the core without much difference.

Gravity. We all would want to live without it, to fly to outer space, or to move with less effort.

Gravity, it holds our atmosphere together, making it able for us to breathe, to be able to look without damage by sunlight.

Gravity, all the living species, animals, plants, bacteria. It all exists in this egg of energy.

Gravity, it is caused by some measured change in the core of atoms.

It is caused by a certain core-element inside atoms not yet counted, measured, seen, proven.

A core element, the scientist want to find with particle accelerators.

May science find a peacefull way of implementing such inventions.

A peacefull way to ensure the good and moral use of it.

visible or notexisting

A long time ago there was on this planet called earth a specie named dinosaurs.

They lived as mammals do today. in an ecosystem eating each other, fighting for their territory.

The dinosaurs had one big drawback named that they only could be aware of changes in their surrounding.

They only saw what was moving, they smelled differences in the surrounding.

When a creature didn't move, it was unseen. and it could escape from the predators.

In these days we have our human mankind. we see everything also the nonmoving material.

But we cannot see things which doesn't move.

If you have money on your savings account. it doesn't move. and is invisible in the economy.

Money gets to be seen only when spend on concrete or existing things (objects, services or values)

If money is not spent, its not counted in economy.

The country exists only by the things being sold, being earned.

And being sold is only what has been in stores and is consumed.

And everything being earned is only what has been worked for.

Money which is not in the economy, is not counted.

For example if a rich banker owns half of a countries savings.

And is able to make more of it.

In a savings account it isn't worth any goods or visible representation.

Only when its spent on something, its appears in the economy as valued goods or services.

If money doesn't move its not seen, its not visible.

As long as it doesn't move, its safe value.

(by the example of the predator looking for prey, if the prey doesn't move, its unseen.)

The same is with having savings, a making it visible by talking about it, or spending it.

Money exists from the moment its spent.

Money disappears when its a little time not used.

Intelligence

As a specie of life, a form of living in a body.

In our world we have different species. From inanimate to building or protecting.

There is primary intelligence. which is basically eating, fighting, flight.

Most animals have this primary intelligence. the instinct to eat, fight etc.

There is secondary intelligence. The species are with extra intelligence.

Primary to eat and fight, to search for shelter.

The secondary intelligence is to build homes, labor for food, arrange for protection.

Most humans have this secondary intelligence.

They can make tools and use them to assist also in their primary needs and intelligence.

What humans don't have is:

Tertiary intelligence.

Secondary was to build and use tools. to make homes, do farmerjobs for food, build defense for countries. etc.

Tertiary is to create living species, life forms with procreation and bodies capable of doing a task.

These living species do tasks to help a superintelligent specie, a tertiary active specie to

make living easy for them. homes, food, protection. By life forms created, designed by this third level of intelligence.

We as human beings are slowly transcending to this tertiary kind of intelligence.

But as i guess those thirdlevel intelligent beings are already present in the universe. Maybe we are part of their creation.

Telekinetic

In a civilisation unknown there is a kind of job that is very special.

A couple of persons are trained in their kinetic possibilities. Not by touching with hand or body but with the power of the mind.

They are trained to get information out of persons minds. Before special activities they read the mind of important people.

And when they want they change subjects in the victims mind. They change the way countries are ruled. They change the way the hot shots do their specialty.

Kinetic is a way of acting with a kind of power compared to magnetism that influences data-objects like disks.

Telekinetic are the psi-agents appointed by the highest of intelligence agencies. They are unknown to us, but they are used by every very important situation.

Maybe to normal people it's a fantasy. By normal people seen as a subject for a good movie.

May the wisdom be placed in the hearts of those who create the governmental plans

Shape shifting

Shape shifting, you don't notice it when you are not informed by them.

They use visible persons to give their appearance a function.

If they would change to mister bush or prince of some country.

No one would notice.

Except when communication is checked.

If you see an actor in your surrounding you sure know he is not in your country. Then it is a shape shifter.

Normally shape shifting would be for aliens to ensure their tasks on earth.

If you recognize someone with eyes in a certain glance.

Be sure it is a shape shifter.

They can choose to appear like that.

Shape is a function they can change just like we change our clothes or change the picture on the desktop.

Some when they saw someone name it angels or guides.

And they act as protection sometimes by prayers being said by a person in danger.

Healthcare

In a future situation the hospitals not only cured by also made possible to enlarge living time.

If as a person you had enough money and if you wish to live longer there was an option in the hospital.

A room full of beds and in each bed a cable which was connected to a central system.

The victims would give life-fluid to make able that others with money can use the life-fluid to longen there life.

The victims loose life fluid, thus living shorter.

The clients receive life fluid and live longer.

Another theory was that persons who cam in the hospital had a choice of giving their soul to live in a central computer.

The cable would pull the soul out of the body and even could place the soul via a cable in another body.

In the other body it could be forced to do tasks for the soul in that body.

Device of protection

In a future place and time there was a technology that helped the people to be protected for all kinds of danger.

the technology was a device that was about 15 by 7 cm in size. You could place it in an armpit. It would create a network of lines through the body and by that way protected against diseases.

And a forcefield prevented from weapons entering the body. to activate it was given an expression, and to remove a second expression was used.

The device was later on when society fell in wealth only used by kings or royal persons.

A couple where left of those past ages, so it was only for the very special people.

Royal elite

A myth of the far past was:

Persons of royal nature. Being kings, queens or royal are gifted with a good nature and character.

Persons of royal nature where not choosen for their riches or their fate without ground.

Kings and queens had a special ability.

If you would place them in a situation, even a low one in the hierarchy. They would be able to do the things to retrieve a good position again.

For example if you would place a prince in the position of a beggar or homeless person he would be able to get work, say the right things, do the right things to get that high position again.

they where not kings and queens for no reason, they had the right to it because they worked for it theirselves.

A king is a king because he worked for it, an had the capabilities to become one.

In another myth a king when having a child, the child had to be tested. If it was a ritual or a real test is unknown.

But the child had to stand in a room with a wild animal and had to survive or win the fight. And he had to not show fear or bad emotions. A wild animal for example a lion.

If he would succeed he was in the royal family.

World Labor Alliance

A possible social instrument for the whole earth is an organisation which has a couple of functions and resources.

An organisation providing laborplaces with a reasonable salary and a option for a house and enough to buy food etc.

An organisation at which everyone can apply for a job.

The only difference is it has no marktbased salary and its a basical option of living.

In all countries there should be a place where that organisation can be productive.

When applying for a job, the person can if not educated attend for a jobtraining.

The differences with normal organisations is:

Salary is on a minimum amount, enough to have basic food and living.

Education is part of the contract and has no extra payment for it.

Places are in each country on the earth.

The organisation uses labor all over the world to provide places all over the world.

The reason for this organisation is:

Poor or rich, enough reason for application.

Living in a poor country, able to apply. You can be placed in a country able to provide for the labor of organisation.

A worldwide organisation.

Working for collective products and services.

Collective for example healthcare, government labor etc.

sun light & Gaia

We all experience warmth when we are in full sunlight.

We see all things clear and we love the light for its good radiation.

The sun is our source of good feelings together with food and water.

Food has the source of sunlight to grow to delicious vegetables or meat.

The water gets its clear nature by the sun shining in river and sea.

But the sun is more as we know and can see.

The sun has as its radiation the visible light.

And the radiation is warm and full of energy.

If we compare it to a living being.

An animal has a heart, blood and all kinds of functions to make it able to move and do intelligent things.

The sun has as its body his radiant sphere which we see in the air above us.

the sun has its radiation the light which gives the ability to see and coordinate our actions.

The sun not only radiates a shine of light but also a radiation of consciousness.

When we say something has to show in daylight, or it cannot be in daylight.

Then its the consciousness of the sun which gives something a good or bad reason or purpose.

The sun sees and experiences everything its light enters.

So the sun sees our bodies, our actions, our intentions.

The same is with the earth.

The earth has a sphere and body we call gaia.

Gaia an intelligent system of particles from the molecules in the surface to the plants and animals.

We all are on earth a part of gaia. And we fulfill the task the earth places in our intuition and feeling.
Its a theory but when we die, we return to the big spirit of the earth waiting to be sent to a new body again.
Both earth and sun are conscious and sends the awareness by light or other forces.

Earth Egg

We all know that our earth is growing unhealthy.
We use the resources out of the earthground.
And the atmosphere is more polluted.
The earth suffers from our work to enrich ourselves.
The earth has no choice to endure our influence.
But sometimes its a way which will be good for the future.
If we look at now its devastating our earth.
But if we look for a future purpose then its seen that we grow
up like an infant specie to a mature specie.
As like in a chickens egg. The chicken eats his egg to be a child
chicken. If we would compare.
The chicken doesn't destroy the egg for no reason. Its using it
for food, and when he is ready he breaks the eggshell and
becomes a creature.
We also have the same thing. We use the resources but not for
no reason. When we are grown up we will break the shell.
And we travel to space to become a space specie.

Future value

In the future we will change our society in some ways.

We will be more paid for work. Because the government will be less in size and more things are done by robots.

The second thing is that gold and silver will be worth more.

Gold and silver will be in the future a side-exchange object.

Time-measure

In these times we are all used to having a watch or a clock in our sight.

But in the past it wasn't that normal to have the time as a number or symbol to be looked at.

Time in the past, was a feature of religious and cultural people.

In the religions it was a usefull tool to have a church with sounding the bells each hour.

And in culture there where proverbs giving guidelines.

Time in the future will be a step ahead of what its now.

We are used to have appointments on certain times.

In the past they had appointments given or planned by the phase of the sun and moon.

Sometimes people where waiting for hours to be in meeting of each other.

In our future, how will we measure time.

By the hours, by minutes, by seconds.

Or will it be advanced. Giving computers information out of our brains.

Accessing our bodily functions through a artificial intelligent system.

Even controlling our thoughts.

In the far future if light speed is used in transportation.

It will be sometimes a microsecond which gives peace or war.

It will be sometimes a microsecond giving large groups in our civilisation food or drinks.

A microsecond judges the good or bad side of your life.

good versus nice.

A lot of people know sometimes, if i do this. its not healthy for me.

I can get sick, i can be in pain because of it in the future.

Its a profound choice. is it good or bad. is it nice or boring.

Most people know sometimes that a choice is not just a choice but being weak and stepping in the pitfall again.

In your life, you can best start choosing to be on the right side as early in your life as possible.

Because when you get older, you can have the feeling it gets harder to choose the right path.

If you learn in your youth the good things. its easier to be on the good side at a step further in your life.

Its every time the choice. Is it good? can i choose the good thing. don't be weak.

For example if you weigh to much. and you get dinner. Will i choose what makes me thick but tastes far mre delicious, or do i choose the healthy stuff.

Healthy is what is said to be healthy by healthcare. Vegetables, fruit, nuts etc. are said to be healthy.

Its as having in your soul two forces. One saying ah please it doesn't matter choose the delicious one.

The other saying. don't do its giving you a bad time later.

please choose even if its boring or if healthy stuff is not cool or tough)

A good choice will give you the longes time of bodily happiness. being experienced as a bodily feeling of calmness, non-suffering, good energy.

A choice for goodness is giving you if idealistic the longest life, the least pain, the best behaviour.

Black disk

There is among the intelligence agencies a special disk.
Its called the black disk.

On it is stored all the largest risks of society.
How the risks are being caused, what to do about them,
and what characteristics they have.

A black disk, is about society, all the bad things,
Not only earthquakes but also the most vulnarable things.
How and where they are in risk, and how to prevent them.
But thats not the only information at the black disk.

Its also all the countries governors or ruling people.
What they have as secret plans and if they could succeed in
inflicting it if they would use bad instruments.

In diplomacy is a group of people or agents who know about
the black disk, and they agree with each other on helping each
other and serving the bigger good.

A black disk is a disk with the risks.

But also future plans of the black society.

The black society is a shadow ruling elite.

Not only good people but also secret organisations of the mob.
Mafia.

The black disk. Not a black box. or a black organisation.

Its bigger. Its important to not comply with people in your
surrounding asking you to be together with them in such plans.
Because the first time you say yes to it. They have a special way
of manipulating you. Stepping in is easy, but stepping out is
hard.

money and purpose

In our future we will have money, and we will be satisfied not by expending our money. But because we choose to let it not be our main objective.

There is a good possibility that people will find out that when money disappears we will be satisfied.

Because without money we have no desire for profit or riches.

We will be content with what we have.

Money is a piece of wood representing a god or superpower.

But as soon as people experience that the god doesn't talk, doesn't help they will throw away the god and search for real gods.

May mankind find the best possible future, and the best way of life.

council of species

In our future we are in contact with intelligent life forms.

They will be called intelligent because they are able to communicate with translinguistic features.

The contact with those forms will be organised in the council of species.

Each specie representing their race and have their intentions and goals.

Will we be able to put aside our aggressiveness to work for the greater good.

we will be most likely maybe the richest specie but not the most empathical or the best at social functionality.

The council of species. May they brin peace among intelligent life.

The council of species. May they create a haven for the poor.

The council of species. May technology and education be shared without cost or profit.

Collective assurance

The countries as being formed from far history, have borders distinguished by three marks.

The border of language, a different language can be a different country.

The border of culture, habits, traditions, skin color can define borders.

The third one is religion. A country with Christians versus Hinduism or Islam.

Countries with a border are found in each region.

Regions as being defined by coordinates like being distinguished by satellite or cartography.

Countries sometimes enlarge their territory. Enlarging the regions by which the name sets the name of the country.

Countries having the same culture or religion, become allies.

Countries being enemies are mostly different religions or culture.

If the language differs it's not directly they are enemy.

A concern of a country is the safety for internal and external dangers.

Safety means that citizens or inhabitants can feel safe.

A safe feeling has as its basis that violence or other causes of misery have no base of existence to the height of possible intervention.

Violence can be prevented by a police force or a military force.

Another importance is that citizens can feel secure about income, labor and education.

Education gives people a path to be able to provide for needs and wishes. (wishes for necessary livelihood)

Income gives people security about being able to eat, drink, have housing and do culture.

Labor is the means of the society to form it to a unity and maintainig the whole.

another concern is the healthcare.

People must have acces to medical care with cures or care for diseases which are collective and are not caused by individual acts.

A human with cancer, if not caused by personal act, ought to have acces to medical care.

All diseases which are caused by behaviour and is a choice of causing or avoiding it should be financed by a propotional share of the income or savings.

(to stimulate citizens not to do things that have a negative impact ont their health)

A collective concern is something that is larger than the individual influence.

For example a market financial system with money or trade is a collective concern.

a quote of plato a famous philosopher is:

If you put at head of a civilisation someone who is a trader who daily works with money and profit.

or if you put someone at the head who is an athlete. Who has as his goal to be tough and strong.

or if you put a politic and studied person on society and rules.

Plato compared it with a captain on a ship. someone who knows how to control a ship. bieng someone a trader, an athlete or a shipscaptain.

A collective concern should be cared for by a collective government. to be ensured that the right concern is being fulfilled.

Collective certitude about health, income and culture.

Collective certitude about the right on religion, culture and tradition.

Collective certitude on personal responsibility and

perceptibility of danger and advantages.

Collective certitude as means to social wealth and happiness.

Collective certitude as goal for individual and social help and protection

World problem

The biggest problems in our world are the wars that now and then rages over the earth.

But as said by others that religion is the source of war is untrue.

It is money that is causing over 80 percent of the wars.

The other twenty percent is the natural urge for territory defense and offense.

Money is the main cause of most of the conflicts.

Inflation

The source of inflation is printing money without a backup of value in gold or material.

The more money is printed the more value in numbers it represent. But the real amount of money doesn't rise.

So money devaluates by increasing the mass of it.

Inflation is a bad process in society. Not because it destroys value, but because everything that is owned gets less in value.

A house gets worth less. And all the owned things too.

Deflation is a natural antidote to a society getting depressed or going bankrupt.

When a country has inflation, then don't lend moneu, but increase investments on industry and production.

Radio activity and nuclear activity

In regions with power plants, where radio activity is in the natural environment.

A solution is to sow lupine plants or seeds in the ground.

Everytime when it is big, mow it and leave the dead plants on the ground.

After a couple of years the radio activity is neutralised.

Hunger and eating

If you have often feelings of hunger.

Try eating raw carrots. By chewing them fibers come into your stomach.

And hunger disappears.

Another solution is by drinking soy or almond milk.

A third solution is by eating nuts (unsalted)

Smoking and nicotine

A good remedy for smoking cigarettes is drinking tea made of cinnamon sticks.

Boil a stick for 15 minutes in water and drink it when you feel the urge to smoke.

Yellow Line

Prayer and Wisdom

author: Bastiaan Oostendorp

Godnames

All the religions have their god.

The jew-god was Shaddai. which meant the Allknowing Allpresent force.

The hindu-god was Brahman. The whole reality and its intelligent creator.

The islamgod- was a representation described by the angel Gabriel also called a omniscient force.

If we study religion, we see that every religion has the same power they pray to or try to serve.

The Almighty. an intention to point your prayers to.

Parable

Early hinduism had a couple of books, or holy writings named the upanishads.

Of which a couple explains what makes humans happy.

Happy in a lifeexperience not based on desire or wishes.

One Parable is:

There is a rope laying in a dark area. And everyone who passes it sees it and thinks it is a snake.

So everyone is afraid and scared that the snake will bite.

Untill one wise person comes, and sees all are scared of a snake, he points at it,

touches it and everyone is convinced it is a rope.

Fear disappears. Everyone is happy and doesn't think anymore about a snake laying there.

The lesson is: The reality is not alway as hostile as we in our minds think it is.

Sometimes the reality is like a rope, not a living hostile force but an article or appearance without living source.

Poly-cracy

We know government in our countries are ruled by a representation of the country.

Social groups are choosing the one they want in government.

But the politicians being appointed have their own agenda.

They when elections are held say to represent certain values.

But when chosen they have all kinds of interests, and not always because of their group they represent.

A new government which is possible when communication is at a certain technological level.

A government in which the people decide for themselves.

And where every sound is translated in a voice, against or pro the government.

I call it polycracy. Choose by deciding on every subject politics come.

When we use the digital knowledge like used at creditcard companies, we can give every citizen a voice in politics.

Imagine. Every morning a new decision is in your special inbox, maybe related to the current digid in our country.

Every morning a question with a couple of possible answers.

The government cannot lie anymore about what she is doing. the people are in control.

And when the questions are truthfull there is no range in what will be possible in such a country.

Poly-cracy. A government truly concerning citizens.

Heritage

A fictive society, a civilisation with certain wonders.

If a societ has certain values, or wise lessons.

There arises the need to make it known to the future.

For example the egyptians, they had 'experienced knowledge' about afterlife.

Such as a pyramid. thy believed that the soul after life, in death travels to the realm of those passed away.

They wanted their leaders to rule after death from the realm of twilight.

The leaders and the slaves made the pyramids as a heritage. the same with all the other civilisations, they left a heritage about what they esteemed highest.

Most civilisations leave a heritage, but sometimes not undamaged.

The greeks and romans, left the temples.

What will be the heritage of our own civilisation.

We don't build large statues.

We don't create special things.

We as civilisation. What do we leave for those in the future.

Will they say, we have no air because they burned or used energy with side effects.

A heritage.

Attention

Nowadays meditation is a favorite act of relaxing.

By meditation pain and suffering would slowly diminish.

By meditation the mind gets rest and when in use again it is stronger and more effective.

Meditation, as some advertisements say. Attention makes everything more esthetic beautiful.

Attention gives increase in good values.

When someone meditates, first the people get more calm, second people begin to work more harmonious.

Third after a period even the scenery gets more harmonious.

Better color. in place of black an ugly its get white or green or orangecolored.

Meditation, it sure is worth a good study on the good effects, effects on top of the personal better lifeexperience.

The place where is meditated improves slowly.

Manipulation

When you have a certain job in military you learn to distantiate from pain.

When in pain you learn to just endure it.

But in groups of heightened intelligence there are levels of influencing.

The lowest level is to force persons with direct pain infliction.

When the subject is in fear of the pain, he or she will do what is asked for.

The second level is to influence by using normal fear for subject as a way of manipulation.

when a person a scared of spiders. the person is forced by confronting with spiders.

The third level is by influencing the stable ideas of the person about his friends, beloved ones, etc.

By lying about it, the person thinks the relation with his beloved ones is in danger.

For example the manipulator tells your mother is angry at you because you don't help us doing this or that.

They pretend the task thy give you come from your beloved ones.

The fourth level is by influencing your ideas of right and

wrong. The enemy is what you have to attack,

and who tells someone is the enemy, All reasonable arguments to point one.

Influencing the judgment you make on someone.

The fifth level is by influencing core values of you.

core values like 'this is reality' 'this is my body' 'this is how i usually behave' 'what i do is according to the law legal'

'my work is needed in society' 'i have to do what i 'm asked for in my job'

The fifth level is the level in which you encounter intellectual fears.

If you see a movie about a reality simulation, in which it seems like the real reality is also a dream or computerprogram, you get intellectual fears. (intellectual and intelligent)

Simulation game

These times, the rise of the computer.

The interactivity of the machine.

As humans we sometimes, if we live in rich areas go to theaters and cinema's

We see nice and pretty movies. About subjects we like to experience.

By seeing in a film the things we would like to have in reality we have pleasant experiences.

With watching movies we think nothing bad can happen. But when movies get more realistic and more psychological processes are built in the movies can have bad side-effects.

In some decades simulation will be a way to force people to get more main-stream.

In the times which have to come movies with an interactive element will be used to force all people who are not 'normal' to get more 'normal'

Interactive simulation games. Like first person shooters in the gameindustry but then a thousand times more realistic.

It gives you distress if you apprehend what will be possible and be used.

May the future hold both peace and happiness.

And a way-out of the nightmare if it ever would exist.

A simulationgame. in the movies these days it is entertainment. but if it would be real.

For every criminal or abnormal person to be obliged to watch or experience 'lessons'

Hopefully earth will have a safehouse for everyone, who wants to have a good life at the good side.

symbolic description

In languages we can sometimes hear or see the meaning of a word, as it emerges from history.

Names in the religious writings of the far past have the same method of being named as some of today.

The biblical term 'satan' is described as the opposing force to goodness or the evil source of all mishap.

The other biblical term is 'devil' and it has the same meaning.

But if you turn the words counter clockwise, you see that satan, becomes natas. (natas probably a latin word for being birth)

And the word devil, becomes lived.

The meaning in those words are opposite to the spelling backwards.

This descriptions proofs, as i may humbly say that those two forces do not have a physical body or intelligence that operates as a being named as such.

A large spirit with consciousness bigger than a planet, with intentions only pointing towards bad, destruction, pain inflicion etc.

Such a large spirit is not existiting with that name.

So those two words point to a philosophical entity, having that name to personalise all bad things under one symbolic word.

Other words describing bad spirits, or forces may or may not be the same, if beings have a certain name, not with the meanig spelled backward, or spelled as a feature or part of it, can have the role as described in the writings of far history.

Personality

Every human at birth gets a name.

The name as a symbol to point to that person.

A name to be able to talk or communicate about cause and effect.

A name to not only give coordination and processes a meaning.

A name is such as a symbolic link. if you compare it with a computer.

In a computer programs have a link or an executable.

And by that link everyone operating the computer does know what a certain program is or does.

And people owning computers communicate about programs.

As every program has a link and a purpose, the link has

sometimes a symbolic meaning about the program, or a description of the company which created it.

Animals have names, and everyone knows the visible appearance when you call the name.

People have names to. Some of them are conceived by intention, some are names being appreciated by the parents.

And every person gets a name at birth.

Names, and the meaning. Sometimes i see persons, having a name, and having a similar personality.

Not just the way they communicate but also the choice of clothing or how they appear.

Names, there is more to it than just visible or known in society.

If someone would like to know, i hope time and means are available for a good study on it.

Thoughts about Jesus

the largest religion, if i may say is the one based on the teachings of christ.

He was on the earth for some time, but gave lessons and made miracles happen.

An experiment is; if you would have powers above the average human level.

What would you do with them.

If safety of yourself was guaranteed and the people you love are without deficit.

What goal or purpose would you find in life.

Extrahumane powers, most humans would use it for fame & fortune & success.

Jesus had powers we have not seen ourselves, but in the writing about his life.

The bible we read proof of his miracles.

Jesus, in the bible he said he felt the force going to the woman who touched his clothes.

He said he felt it. but he didn't say he did it.

When he was praying on the getsemane, he said to god to take away the foretold future of pain.

And he rose from the earth up to the clouds to go to his father.

If god, or the lord of heaven would be omnipotent, omniscient, he would not live above the clouds. He would not use signs as pigeons sitting on the shoulder. As i can understand.

What lord did Jesus pray to, and serve.

As he said he did.

Some people might think he was an alien put in human form.

And as an alien, he had to choose his own destiny, his own life.

And he chose to help humans.

If he would live today. What would we do. harm him, banish him.

Christ, some see him as a saviour. But did he save all the ones asking Him for it.

Christ, some see him as son of God. What characteristics does a son of God have.

We cannot proof either he would be a son of God, or a saviour, or a normal man.

We cannot have a judgement on someone who is bigger than we understand about ourselves.

We cannot experience what he was and did, because he was no regular human.

The only thing we can do, is study religion and keep the good things.

The only thing we can do, is live and let live.

The only thing we can do, avoiding to experience pain and suffer, and to prevent suffer and pain at and by others.

Evil instruments

The world is divided in people doing what is needed to support society.

To support all humans or other creatures to be a system in which life is at least neutral to experience.

The support of the world, planet, universe is to give all beings a place to live and to be usefull for the universe.

the humans being part of the society and fullfilling a role to support the whole system.

The other side of the world is the people who are a burden on society,

for example evil people diminish the happiness or prosperity in the world.

Criminals , steal, damage and do things to destroy.

the society is not the task of a person alone, but of all the people and creatures working to let the system as a whole respects the places and uses the forces to create prosperity and happiness.

The evil force, opposed to good forces create chaos, suffering, fear and pain.

The evil force has instruments to influence the creatures they have as enemies.

The instruments of evil.

Fear is for most beings a reasons to avoid certain things, or to create a border or to stop doing ceertain things.

Evil forces use fear to persuade humans to be part of the evil system.

A second instrument they use is the prediction of pain or suffering.

they tell you, if you don't want to suffer in the future you have to do what they say.

A third instrument is they tell you the people you trust, for example parents, teachers are imperfect and deficient. And because as they say they are not perfect they cannot be a good help for you, in opposition to them.

A fourth instrument is the use of social role models and idols. If you look at the television you see what you can be, or should want to be.

Pop stars telling they are famous, but with the sidemessage that it is good to wish for what they want. like money, fame, and bad things like gambling and the other sins.

These are a couple of the instruments evil forces use to both seduce children and adults.

For the target they choose, they have a range of arguments and methods to choose from to tempt them.

A fifth instrument is they tell you justice is not something in society.

When you miss a child or you have a relative with a disease.

They tell justice is not achievable in the legal way. To the dark side, where it is possible to get revenge.

All the forces both good and evil, give the other side reasons to be the enemy.

In countries: the capitalists say communism is a sin, or evil.

And the social groups say individualism is evil.

All groups or parts of society give a opposing group the sign of being evil.

The islam say christianity is evil.

The christians say atheism is evil.

The main arguments in law and ethics is:

What is happening to someone else, with your reason, or influence. would you like to experience it yourself.

What lets you suffer or in pain, do you want it to let someone else overcome.

And when you would be in the footsteps of other people or living beings, would you accept what your path is like. All the living beings walk the path of life. And the measure is, would you want to destroy the path of others, and would you accept it, when the path of someone else would be your path. The second main argument is:
Are you befriended to your brothers and sisters.
Are you befriended to the living beings, with alike features and goal.
Are you befriended to the whole of our humanity.
Are you befriended to the whole world with all living beings included.
If you are not befriended, what hinders you.
And if something prevents you from being a brother or sister to all world.
What is needed to overcome that limitation.
And can you make the first step to give others what you miss in your life.
(if it is reasonable and humane.)

Black mass

In today's science they use particle accelerators to create new particles, of which some only exist for nano or micro seconds.

But the real matter which cannot be found is black mass.

Mass with the characteristics of being not found or visible.

In their basic components they don't reflect photons, as usual mass does.

By not reflecting photons it is invisible to every creature able to see visible reality.

It's like having a secret chamber behind a bookshelf.

Unless you know it is there it is not found or seen.

Black mass, it also has negative gravity values. It does not respond to gravity calls as being made by large objects for example planets or solar systems.

Without visibility and without force fields like gravity it has the ability to have a certain stable position.

As a planet circles around a star or sun, the black mass doesn't move at all.

And it isn't seen too.

Black mass, it is a theoretical substance unless been found in reality.

May black mass be used for positive purposes of harmless tools.

Water & its value

As i have heard, in 400 years the water supply on this world is polluted with a kind of forcefield code, thereby the water is not anymore a life-feeding-substance but a source of poison.

Only water which is filtered and purified is healthy.

And the filter takes some electric source and a chemical basis.

As a joke i use: Water will be the biggest poison there is. At that time.

Another thing i heard is that water in a jar, and when you turn it round and rount,

the method of creating typhones is a little bit like creating a field where-in gravity is being reduced.

By creating such a field in a jar, its in the small space what can be done in a big space.

Water has special characteristics that works like that.

May our world in the future have the blessing of happiness.

Mercy of saints

From the beginning of time until now there is once in a while a saint visiting our world.

Or instead of visiting getting to be one.

A saint is someone who has the mercy of the gods, or one god and uses the mercy to save people.

They can pray for forgiveness and ask for boons to their god.

But if someone dies, he or she can ask a certain saint to grant them a new life.

For example the saint John of the early christianity can be asked for a new life,

And with that new life, chances to be a good person.

And that's how people get their names. Not by coincidence but as the mercy of the saint giving them new life.

A new life with the life you asked the saint for. And the name of that new life consists also of the name of that saint.

It has not been proven that it works like that.

But it could or would be.

May the saints grant us new life. With the characteristics they became saintly by.

May all be blessed with the light of the Almighty.

Door Sun

The sun is one giant ball of fire.
but the best of gates can be camouflaged by a heat and light not
able to pass through.

To use the sun or other heat sources as doors your ships have
to stand the harsh conditions.

The sun as a seal to have a door only opened by certain high
intelligence beings.

When the sun would be a door, we as humans would never be
able to go through.

Not any human would be able to see or pass through the door.

Not without support of an high intelligent specie.

The soul of intelligence when not anymore bound to a body
could go through.

Most humans call it the light deceased ones have to go through.

When you tell a soul to go to the light. It is the sun they travel
to.

And when spirits of other sides, the mind beings or souls want
to dwell on earth they have to pass this gate as well.

May all the creatures reach the light. During their life by the
light of wisdom, and by death the light of life.

May all beings reach out to immortality.

May all beings reach our for wisdom.

May all beings reach out for good health and prosperity.

wise government

Governing a country always has good and bad sides.

A part of the country agrees and a part is against rules or processes.

A good country has the largest part being content with the style of governing.

And a bad country has a lot of enemies.

Both inside and external.

An enemy costs a lot of resource or money to be kept at distance.

Therefore the main goal of a government is not to go to war or to use vast resources for fighting.

The best country has allies and friends by which the costs of defense or police are cut in parts or with the benefit of big numbers.

A large group will have less to pay than the same group funded by less civilians.

The main cost of a country is to provide safety and security for all inhabitants.

The safety to be protected against violence and other criminal acts.

When a country is protected the civilians can choose to get education, to labour or to raise children.

The second task for a government is to provide the civilians the education they need to be productive and have a life of meaningfulness.

Being productive gives the individual persons the feeling of satisfaction.

And satisfaction is the feeling everyone needs.

The education is partly the responsibility of the government as being part of the basic education needed to be a part of the country. basic education like language, math, gymnastics and so

on.

The education to be able to labour is extra and can be provided by the profits gained with the knowledge and expertise.

The first task is protection, the second education.

The third is the care and cure for people with sickness and disease.

Caring for them is mostly a higher cost than people own by working.

And caring is more a task of the collective because sickness is not always the fault of the individual.

When citizens know they are being cared for when sick, don't have the insecure feeling that if they get sick they are in a deadline.

A country caring for sick people gives a good feeling for all citizens.

Because it is good to realise that everyone is part of society without prejudices or false judgements.

The fourth task of a government is to give every citizen a reasonable part of income.

A country has the income of all labour added with all the profits of trade.

A country giving all people who labor an equal part is being regarded as a just society.

Everyone who works wants a good income for it without being misused.

The fifth task for a government is to provide for culture and religion.

Culture and religion is part of the social life of people.

They have the right to use culture and religion to make their social and societal role to being content with their development and evolution.

Goal seeking

We as human specie have all similar ways or methods to act or do things.

We have goals and reach for them to give our life the meaning we want.

But we would be happy when we release our goals and not trying to reach them anymore.

All the friction in life is between our surrounding and us trying to reach our goals.

If we let loose our goals, we adapt to reality which gives the most possible contentment.

Goals are an instrument of our mind to reach for the program it wants to realise.

Goals which are released do not anymore create karma because they disappear.

Some wise books tell that the release of your goal gives you peace and happiness.

Some wise books tell when you stop searching you get happiness.

subject coding

In the near future we have computers all related in a grid.

We now use objectbased programming with objects with characteristics and

unique little algoritms to make a big complex program.

As we progress the internet will be more and more important, and with operating systems and programs being part of a subscription.

Like it is now with some email, netflix, spotify systems.

We then will use a subject based system.

Each computer can have a couple or more subjects being executed in the system.

A slow computer with only a few, and a complex computer with many.

subjects are like programs running in an environnement but doing work for the user or for a collective system.

It is like programs being used today as the world community grid.

By allowing subjects being run on your computer the subscription to services or programs can be less in price or been subsidised.

Subjects consist of object oriented programs. but run stand alone in an environnement.

Subject based computing.

A step between computing and intelligent artificial systems.

As robots make use of subjects to create their goals and use the resources to be able to run intelligently.

The third eye

In all the writings of ancient times there was one secret of religious practice.

All the upanishad tried to explain the main goal of spirituality.

All the hindi writings were pointing to one main truth.

the enlightenment, the opening of the third eye.

The opening of the wise source.

The third eye is the eye of the vision of consciousness.

Moment to moment awareness.

Awareness of the ultimate reality.

Awareness of whats true in life.

The wise sages of those times, all had the characteristic of such an eye.

The wisdom to be kind, to be full with wisdom.

They were the source of welfare.

They were the source of goodness.

They educated all the people around them about wisdom and goodness.

Peace was a natural result of their practice.

May all know goodness.

May all attain peace.

May all live without sickness.

May all grow from suffer to happiness.

May the ultimate reality be available to them who search for it.

Om shanti shanti shanti

reality energy paths

As we have bodies with all kinds of tissue in it we can look at reality and the galaxy as the same.

In our body we have nerves which transport electrical impulses.

In the galaxy there is the same. ways which act as superconductors.

All ships going on that track travels with high speed to the end of the so called high way.

Just one aspect of reality.

Those highways are in movies called as hyperspace only then it is a sphere or dimension without paths.

The pathways of that hyperspace or between space is not easy to discover.

Discovery is by empirical sight on space events.

Homerus brothers

In the far past there was a religious sect which called themselves the homerus brothers.

They were seen in the times of the greek and latin societies.

The homerus brothers lived on mountain tops, and clothed themselves not but with oil and fat.

Naked they lived as religious people.

The homerus brothers.

Not much is known about them.

Genesis

The bible is read by many people.

But its more than history.

Its describing religion.

From the very beginning in genesis to the end of the line at Jesus message.

When in genesis they talk about a descent of man to the perishabke form.

A couple of things are said.

The angel of fire protecting man from getting the fruit of eternity.

And the tree of knowledge of good and evil that demises mankind.

The angel of fire. Is in my vision the sun with its big sphere of fire which not only gives us light but also is a border to our possibility.

And the tree of good and evil. is like having the mind controlling people with the insights on what is preference and what is avertable.

In the genesis there is the first man was a living spirit and the last a lifemaking mind.

We as humans are from that time of in a certain path of science. Which lets us discover all knowledge but not to our happiness. As we get damned in the bible with hardship.

Genesis.

In the bible the tree of life is also the prayers as read in Proverbs of Salomon.

Reality

We as humans only know three dimensions. As the source of our living.

We build and protect our homes, get our jobs, and raise children or work for ambitious tasks.

In reality we know there are three dimensions.

We can walk and move in those three dimensions.

There is however possible according to guessing scientists a lot more dimensions.

As i would think it we would live in an egg and when the shell breaks or is penetrated we see more than only three dimensions.

We see a fourth one, and even more as we distinguish the reality outside our egg shell.

Our galaxy is as an egg shell, and it grows. like an egg, and when its fully grown, it breaks into more than those three dimensions held inside.

By science its even more probable that the fourth or fifth dimension will be discovered soon.

Its like having a store and one place of 1 by 1 meter is with a crack or flaw and a certain penetration or space is there.

If we would want proof of more than three dimensions. we would have to see or search for those cracks. And look whats inside or outside it.

Like a crack in an egge, we would have connection with a second sphere of dimensions.

Its not unthinkable that the crack as in a movie set, or place where movies are filmed that a second movie set is there. Or a connection from this reality as a movie set to an outer reality where the real world is.

A lot of connections are possible in that theory.

May we discover the goodness of using reality cracks for the help and protection of what has to be kept safe.

radio waves

As our world species, including humans we have into space a kind of radio footprint.

We have a radiosphere around our planet.

We have radiotelescopes which reads from space radiowaves with certain frequency and velocity.

With our radiolisters we try to decode signals to information of scientific kind.

But we forget that like animals in the wild regions can cloak to hide until attack or hide to be safe from predators. We are like to face the same when we look in the outer regions around our solar system.

As humans, we look and listen to space but we ourselves are visible like a flashlight in a dark region.

We are like a candle in a room. All living creatures with a certain intelligence can understand their is life that lighten the candle and uses it for purposes of intelligent life.

To compare to our radio footprint. We have radio waves like television, computer based communication, radio, and all kinds of interaction through frequency based communication.

If there would be predator life in space, they would be easily distracted or attracted by our radio based footprint.

Intelligent life with a certain civilisation and a certain evolution will choose to create camouflage for the information or signals that go out of the borders of the planet.

A radiosilent border. A shield or whatever is possible.

We as we would listen to their worlds would probably say there is no life there.

And that's the purpose of their defense system. No life forms available there.

In theory, if an alien ship would be undetectable for our radar, it can read out all the information being in the air.

Information being sent and received by all radio antenna's with more distance than a couple of miles.

Radiowaves being sent to the atmosphere where the satellites are are easily intercepted.

As we can feel or see the lightcorona's in the air. around our planet. it can be seen all our radiotransmission of communication.

especially all our technology descriptions. like wikipedia, digital libraries.

If we would have a weak spot. it is one of the many we have.

Another linked danger is that if communication is intercepted and replaced by messages of hostile forces, and if they own more than our intelligence we wouldn't notice it that information is changed. as such a message of an attacking country could be replaced and seen as something else. or more dangerous a peace treaty is changed to a act of beginning war.

Mind Antenna

In psychiatry there is the man function of the mind.

The mind doing whats not good. giving the sick man voices,
bad ideas or

whatever by which he suffers.

There is a way to get new information, or new knowledge but
its a great risk also.

If one should choose to open up his mind, all kind of
information flies in.

The mind then works as an antenna. An antenna which receives
not only usefull things.

But also whats like dirt in the cloud.

Opening your mind, is like saying it. that you want to open
your mind.

or by thinking of opening your mind.

Please be carefull. Some of them who had chosen to do so are
being protected in a mental health clinic. And they suffer a lot.

There is scientific research needed to see if its endangering us.

An open mind. all kinds of information does fly in the mind.

Choose wisely not only love or calmness is in the mind, but
also all kinds of bad emotions and concepts are in there.

May those who suffer be protected.

Closing the minds antenna would be by saying the mind has to
close, or by thinking that the mind has to close

Ethical decision

Humans have humane law.

Humans operate at decent law.

In world war two the germans used victims to do scientific research.

Not all research in that time was very harmless.

Experiments with deactivating certain brainparts to see what would happen.

As for sure there are on earth experiments right now.

We don't know about it.

some ethical decisions.

To do surgery on a person.

Is it lawfull to do surgery with side effects as paininfliction when the memory of the pain is removed after the surgical operation. (and never be remembered)

Is it lawfull for criminals when the method would be effective to inflict a certain painimpulse to let the criminal be drawn away from doing the crime ever again. (some movies also show such methods)

Is it lawfull when in society high costs are for getting children to kill all babies who have no existence permit.

Is it lawfull when methods are there to change in the embryo the dna and or physical parts.

Is war lawfull when innocent people die or are in suffering.

We know that in the past marriage between religions counterparts was forbidden.

The devil would sleep in their midst.

If a person of earth would marry a person from another race, would it be forbidden such a relationship, and would getting children be forbidden.

surety

Most persons from our reality, from our world has no vision on what will be possible in the future.

A couple of centuries ago we thought the earth was flat.

We thought diseases and sickness was a cause of devilworship or damnation.

A couple of thousands years ago we thought that disease was a sign of sin.

By committing sinfull activities we would get sickness or death.

Now we know that a disease is caused by virusses or bacteria.

The religion of the past for example the islam gives advices or rules that would have fit in in that time. (when their messenger concieved the message)

We know religion as a sign of good behaviour but their is one major problem.

Religion talks about the past. The past the messenger

experienced all what he spoke about as a living guideline.

But what will be of the future. Will we still exist. Does religion has the same importance.

Will guidelines of the past still have meaning for us or for those living in the future.

For example mobile phones, nobody experiences that kind of objects as a cause for sin. Or thinks it is forbidden science.

We see in islam, girls and women with scarfs around their face.

But with a mobile phone.

In the future? will they wear scarfs in public but are uncovered when communicating with mobile video phones.

The future. A new religion is needed.

The future. What is sin in view of eternity.

The future, Will sin be a subject not anymore applicable to us (see the examples of the past religious livings)

The future. We experience more freedom because of the changes from the past from the start of the religions in that time.

May we in the future laugh about our flat world we now not even can talk about, we not concieve as flat with inner meaning of the round ball our earth is.

Lots of things we not know. We are not having much insight in compare to our future.

Country economics

Each country, comparable to a business has a chart of income versus expenses.

In these times there is almost no country without a debt.

This country i live in also has a debt on the government economic status.

Debts are normal and it is paid by citizens or corporations to make able that a country can spend on all governmental issues.

The danger of such a political theme is that when the debt is a certain size and the interest on that debt is larger than the income of a country. Whether the income is by tax or by generosity.

If the interest is bigger than the income there is no way a country can heal from that nasty point of view.

If income is as big as the interest, most countries will be forced to sell part of the collective possessions.

They will be forced to sell banks, healthcare, education, travelling.

When they sell parts of their government there is only loss.

The corporations buying it will be focussed on profit.

And the collective has another goal or purpose than the profitbased corporations.

There is only one way out for any country facing this problem.

Its by giving every citizen a basic income, and taking all income above a certain amount.

If by that rule income of the government is big enough, the country can choose to buy back all the debtnotes or obligations.

It is not a plan for one or two years.

A stable political democracy is needed.

It will take years to heal the government to a healthy economical status.

Allmighty

May the Almighty protect me,

May the Almighty protect my family.

May the Almighty allow me to be a citizen in His kingdom.

May The Almighty give me a task.

I hope the Almighty exist and hears our prayers.

I hope the Almighty is Powerfull and Omniscient.

Allmighty,

I hope the bad things i sometimes see can be cured or cared for
by Thy light.

Genetic combination

In the near future there will be experiments to create plant and animal life with certain good qualities.

Genetic modification is a fact in these times. but the use of it is still to be invented.

Genetic alteration to get new species not yet existing is a possible thing in the future.

We all know the past legends and stories, from the hinduism the gods with animal faces or more than two arms.

From egypt with the gods with animal heads.

If genetic alteration is a good invention and is tested good.

We can fear things we not know yet.

We can be the source of another time of hunger, or icetime.

In a possible future we have to be scared of animals with new physical forms. Able to hunt prey as predators.

The drawback of genetic alteration at human bodies is the reproduction over longer times.

In a couple of hundred years a genetic change with good qualities can be one holding the normal genetic changes back.

Genetic alteration, A good thing, A danger, a source of hardship.

Genetic combination, is it a source of spiritual declination.

Genetic combination, is it a source of unpredicted aggressiveness.

Genetic combination, is it a source of societal causes of war or terror.

The normal borders of natural species is a quality. What quality will deprive when we cross the borders.

Teleportation

In the future we dream that teleportation would be possible.

And a good way to travel through big distance in space.

Teleportation.

We step through a portal,

And step out at another portal.

If the scientific method is by reading the body in atoms and molecules.

And building or printing it at the destination we have one major problem.

If communicating the bodies characteristics and code through space would be possible.

We have the problem of consciousness.

Is the body at the departure the same as destination.

We can proof that with scientific methods.

But we can't proof that the consciousness, the soul or spirit arrives at the destination,

and steps with the body through the destination portal.

In the worst case when a lot of people step through portals,

We get a lot of people without spirits or consciousness.

Without us knowing that its happening.

Because all the bodies stepping through may be able to act like normal beings.

Is that a plausible case in the future. We don't know.

Are their tests to proof existence of the spirit.

A story of science

There in a land or country comparable to china or japan.
They used a certain source for what they show people in
a museum.

It is called body works.

But not with the same method as we know it.

The method they used was to get criminals from jail.

And they let them sign a contract.

With a certain content.

In the contract were a couple of options.

One is the body may be used for medical examination.

With the choice of accepting pain or incision in the body.

The other choice is to be used for material for showing parts or
the whole body

for example without skin or muscles.

The only difference with us today is the experiments were done
at their bodies alive.

And without painkillers or anesthetics.

We can easily see that human rights are not been held.

removing skin, is painful.

removing muscles is painful.

And doing tests on bodies how pain interacts with the body.

tests at brains or other organs in the body.

In those contracts, the one signing it, would after the
experiments get full freedom.

But the question is, could those humans still feel happiness
with those bad things done to them.

Is there a human not understanding that there is a border to
what we can do to other fellow humans.

Cyber-enimated cops

In the future at some point, there will be a new line in the law, describing that people with a sentence for crimes, can fulfill their penitance by becoming a cop.

A cop with parts of their body replaced by computerized or mechanized robotic tools.

Those cops, will because of their cyberparts not able to discard or refuse their job or certain incidents.

When those persons disobey they get a pain impulse to force them to do their tasks given to them.

When they are operational, it is not able to be measured how much they suffer.

For example, they get promised a painrelief or painkiller, but by contract they only have to give it for 2 weeks,

After that, pain or suffering doesn't need treatment.

Those cybercops, as i call them, in their time they have different names, different titles.

May human rights, be applicable to all humans in the same way.

Humans with their natural bodies, as well those who had natural bodies, or the ones able to feel human feelings and emotions.

May the Almighty be aware of all the suffering now and in the future.

Children and education

For children it is important to learn, to play and to be busy with exploration.

Children who have the opportunity to play in their life have more and perfect personalities.

Because they have experience in ways of communication and in the cooperation and competition.

By competition they learn to only do what's right without doing false or wrong things.

If children would not play they would be very unpleasant adults.

And without playing in their youth they would not understand the importance for children to be able to play.

If education is also a form of play it is easier for children to learn.

Without experiencing difficult feelings because of the abstract lessons.

Children who play have more consciousness in their life, as children and as adults.

Children who play more have higher social status in job and private life.

Creatures of life

We all know that the food on our plate is from vegetables, meat or other sources.

We think or have the opinion that it is healthy to eat meat.

Vitamins and other needed materials to have a body capable of doing the things we are used to during the day.

Meat, We don't know that it is the animal who suffers for it.

We don't know the animals are suffering like if we compare it to us as being sentenced to death by being put in a ton with pins and send down a hill.

A death sentence they cannot escape.

A death sentence with the worst pain possible.

Because animals can't talk, we think they cannot feel pain.

Because animals can't talk we use them as meat sources without recognizing the importance of consciousness in their living beings.

If all on earth would eat plantbased food,

All famine would be cured.

All people would have 60 percent less on healthcare costs.

All humans would have more calm and good emotions.

Resulting in less violence, less fights. And most important, 70 percent less war and terror.

It is a choice the leaders must make. To encourage less meat based diet.

to help make possible the good sources of food.

And to have advertising for it.

I wish good luck to everyone accepting such a fact and truth.

And double good luck to them who make it possible for themselves and others to follow health and truth guidelines.

Quest for happiness

Happiness is the sole search of every human being.

We search for happiness in all things we do.

And happiness is being a product we buy, we sell, we work for.

Happiness, if there are legal ways of getting happiness being easier than other illegal ways we would all be happy with being legal.

If happiness is not available in a good and just way we will turn towards other ways to get happiness.

Some people being unhappy search for it in drugs or pleasure.

Some search for it in doing criminal things for money.

Money to spend on things to get happy.

If in a good society the ways to happiness would be available for everyone. Then no one would turn to evil or illegal ways of getting happiness.

The grade of evil existing in our society is a measure on how available happiness is for everyone.

Learn evil people to use the good and just means to get happy and the whole of society turns to a happy, peace loving society.

Happiness is the only reason and emotion for all things existing. By education one learns to point the work towards a goal. Better the goal being a positive influence for society.

The black side

In society we have a dark side in which all the evil exists.
We call the demons, knights of darkness.
But if we look more precise. Black is not a color defined by characteristics but by absence of description.
If we see light it is a fire source which emits the light.
And darkness is the absence of such a source.
In that definition; darkness is the absence of light.
In morality the absence of intelligence and order.
The absence of wisdom and goodness.
Its not the presence of evil, but the absence of goodness.
The lack of energy gives all kinds of things not preferable.
The lack of light erases the possibility of coordination and daylight action.

Future wisdom

As humans we have all a common knowledge of what is around us. in reality, in communication, in life.

We know how humans look, how they act and what different behaviour they have.

As we will be in future time, we can dream about it. We can foretell in a certain matter.

But when we dream about it we can only think of current parts of being human, and recount them to what we think can be in future time.

It is like five hundred years ago. Indians met with people from europe and asia. And indians were amazed by our civilized society.

We can onlky guess what they would have experienced by meeting with us.

It is like meeting indians who say they were stolen by our machines.

If you take a photo of someone. you can think you stole his visible appearance.

Like in movies and television, with reduced intelligence you would understand that the soul was stolen by the one taking the photo.

If we look at the past. and post that to the future. We will say when aliens come to us, they stole our soul.

Not by the same principle or technology by which we were accused by the indians. But a similar process.

A similar process of understanding.

It is a rule if we would be understanding other civilisations that we wouldn't interrupt their societies. or wouldn't influence them.

A similar example is in the movies star trek.

No influence which will harm civilisations.

Except maybe to save total worlds with intelligent species. compared to humans a several thousands years in the past we are like humans compared to animals. And we compared to a future time are like animals unto them.

So we are in our own eyes intelligent, gifted with science.

But in eyes of unknown intelligent species we might be in a stadium similar to animals.

Its like being an indian seeing a photo. If we see our appearance on a photo we think we are stolen by the photographer in his photo, while its only a picture of the visible side.

In our future we will have the same idea on what they do to us in the future.

Heaven

Sometimes i hear people wanting religion because they are afraid not going to heaven after their life.

A good possiblity to go to heaven is by praying towards the Allmighty, and asking him to guide you to a better life.

Ask him to teach you how to reach heaven.

Learn by prayers to Him how to base your life on good things.

An entrance to heaven is surely by being devoted to the Allmighty.

And if you are really scared to be discarded at the gate, the give your life to the Allmighty.

Surrender to Him.

Inheritance

I was someday being inspired by a tribe of indians.

They had a different social system as is usually in the western world.

When they have offspring, children. Then when the parents die, they do not leave their possessions as heritage for their children, but it is given to the collective.

And the collective decides who in their community needs it, or can get those things.

They believed not in the children being descendant from the spirits of the family line.

They thought that offspring were new spirits and were different from the parents.

So when a man or woman died, the stuff they owned became property of the collective.

And it was given away to persons that needed it, or could use it wisely.

A different system. And it was more known that when persons reached adult age they had right for a house, property to be able to live in a normal way.

And because the system was organised that way, it was easier to appoint certain possessions to new people.

honey makers

In this society there is an invisible part.

As a national agency, with network all over the world.

The honey makers.

They arrange political changes,
society manipulation.

For a price they do whatever change in the world you wish.

They have a network of important people all over the world.

They are called the honey makers.

If someone wishes to be president, pay the honey makers and
get the high profiled position.

They are not seen during daylight. But they exist like lions in
the field.

Balance in life

Most people follow a religion to be assured of going to heaven. Some people are not interested in religion, and not in heaven. But as it is in our world, most civilised countries have rules, and laws.

If you follow the rules, apply to the law you are safe and can do what you like.

If you break out of the law, disrespect the rules you get a penalty or jail.

Its easy if you say as above so below.

If you stick to the law you can live freely.

Laws are like in the country you live in:
stealing, killing, doing damage is a crime.

If you follow the rules of the country, if its a decent country. You are safe.

As in my opinion, if you do whatever is good according to the law, you are safe also for your future to after life go to heaven.

Its like the scale of the egyptians. if your life was more heavy as a feather you were to hell after your life. But the scale is with your good deeds and acts on the one side, and the other has all your bad deeds and acts and the crimes you do or did.

If the scale of good deeds is positive, than you may go to heaven after your life,

If your bad deeds are counting more, or are heavier then you go to hell.

Its a simple theory.

Anyone likes to proof it? May the good ones be blessed by the allmighty.

May the bad ones be turned to good ones. In the mercy of the Allmighty

world in demise

I once a while ago had a message from outer space.

The message was a distress call.

It said:

We have in our science no longer the rule of objectbordes,
gravity, dnamorality.

The abolition of object borders, made the use of tools a bit out
of control.

It was no longer safe to do anything you liked because other
individuals could travel through an beyond the object you use.

By that kind of science it was no use anymore to forbid and
send away anything.

The second the science of nullifying gravity, it was no use to
have a planet with ecosystems like we have on earth. because all
the plantation, animals, buildings were not fully bound
anymore to keep on the planet. If an enemy with
gravitycancelers arrived. The planet was not habitable anymore.
the third science. dna changement. It created monsters, which
took away the happiness of living in a good society. The
changed dna creatures were bound to be aggressive and controll
the worlds they live in.

Because they were adapted and for special habitats.

It was a distress call. A distress call of a world in demise.

If we want to keep on living in a good manner. We have to be
carefull what technology will be our worst enemy. What
technology we avoid using.

May we be blessed by the Allmighty wit his clarity.

punishment

In a time last ago, there was a kingdom, which was in technology better as ours.

They had electronic devices just like us. But they also use electronics to manipulate the people.

If someone was into penitence, or had punishment it was a legal punishment to force the ones to carry a load of pain or suffering.

The suffering was done by electronic ways.

Besides that kind of punishment they had a strange way of punishing.

they took the soul out of the body and placed in a single cell.

by that way the soul was never to be again a full person.

A third way of punishment was to force persons in a kind of computerized environment,

They had to undergo interactive movies. By which they learned again to behave in a good manner.

By those interactive movies, they got the effects of real life, but then not with the problem that some crimes go unnoticed.

By interactivity, and reactions to what they did in the movies they learned again to be good citizens.

alien influence

As i can imagine. Our world gets visitors sometimes.
visitors coming from elsewhere.

Its like a secret that we not have proof of their existence.

In a movie they sometimes show them.

Like they infiltrate by taking a human appearance.

For example they read your mind and come passing by in the
visible appearance of your nephew or a long forgotten friend.

If you want to be sure its the real nephew or friend, call them
after a while.

Another theory is that when aliens are in your surrounding the
lightcolor turns from warm white to coldwhite. Like from a
lightbulb to a flueorescent lamp.(And you loosing
consciousness for a little while, ofcourse not known to you)
And if you get taken by them. They don't use anesthesia but
they let you loose your memories of the surgery they had on
you.

It is only theory, no one has proof so let it be imagination.

By the way all the good stories about saved dangers also could
be have a source in invisible influence.

giving the aliens a role as angels.

Intelligence agency

We all know that in countries with a least amount of budget for defense, police and military there is a special agency. An agency with the task to prevent terrorism, to prevent criminality.

Those special agencies, Call them cia, kgb, and all nice abbreviations.

there is a root of those agencies in the second world war.

To be precise in the german country.

there was a kind of analysis on how humans could be influenced. How they could be forced towards things they wouldn't want to.

There were surgery operations, operations on interrogation.

But also on fields like hypnotism. force by pain or verbal aggressiveness.

In germany, subjects were conditioned by pain and certain code-words.

If you knew the code-words, you could do anything you like to the subjects.

you could force them to anything that you liked. Even when it would mean danger, wound or killing the subject by his own deed.

Certain code-words. there are still people alive with those words burned in their minds. when they hear a such word, they react.

But these things not only were practised by the germans.

There are still experiments going on in some agencies.

notnamed ofcourse.

If you would like an end to those experiments. question your government.

Mostly the head of government knows about those special military operations.

natural & virtual

In a futuristic society. We have more advanced computers.

Not only showing us movies or interactive games.

But we as is said could live inside of computers.

We put our soul in a kind of electric basket and it gives us connection to all kinds of views.

Being able to controll an look inside of certain cultural and jobtechnicall appliances.

In a mine it is a machine controlled by someone living inside a computer a few thousand miles away.

Another one is meeting friends in a computerized place. where both the scenery and the people have a visible appearance as they liked.

The virtuals are the ones living in computers. and doing all that is possible by computers.

computers and machines controlled like a marionette.

These virtuals they recommend all things possible and how their lives got more pleasant.

The other side is the naturals who point at the fact that no virtual every has gone back to their living bodies. And its even said that those bodies where not anymore able to live disconnected from the computer.

The naturals. Choose to live in a house, in a neighborhood, in a country.

And they have the ethical border that humans have to feed and do all things with their body.

And not by being immersed in computers.

Would you like to be a virtual if you knew computers would one time be turned off. Loosing all virtuals by a command in a computer.

Or would you like to be a natural. Fighting for the existence of our human race.
with all the problems and chances there are in life.

excarnation

There was a time.

The same as we have these times.

but it was a strange tradition.

A tradition to let yourself as a soul being placed in a new body.
they promised a birth in a certain place.

the place was being characterized by the choice of the client.

One would want a strong body, the other a goodlooking, or a
innocent one.

It was not known for the client which country, which family he
would be born in.

So for a lot of money a birth was bought.

A birth of a man, into a family giving time for the one growing
up to get certain things e wanted in his past life.

If the time was past the living of the excarnation. he would be
placed back in his life as a rich client.

It is however a bad choice to leave your life to incarnate in a life
somewhere else.

It is what is valued most.

Life as unique.

Life as a product which may be used, or misused.

Life as a chance for new beings to live and earn heaven or hell.

Or life as a product for trade on the market of life.

It is for people who are rich, not always a good choice to do
things that maybe possible.

Its maybe a small or easy task to ask for a different life.

But its a big pain for a new life to be edited to hold a soul of
someone else.

Who may not value life as serious as an natural soul would.

time travel

For our humans it is not known that time travel would exist, but only in our dreams we imagine it.

But i saw in some world that the most important people, who ruled their world and kingdoms had a strange habit.

They could appear in different places, different times. Could choose how their body looked.

They had to appear, then they appeared. The place where they had good influence on their task of getting world power in their hands.

As they likely being said appeared around the corner, walked in the room, gave their speech, walked back around the corner and disappeared.

In that way through fast travelling they could be masters of more than one world.

And they had access to more information, knowledge or wisdom than they would have in one world.

They were as being said the invisible masters governing all the worlds highest assets.

In each world they were the most high people in the hierarchy. Time travelling is like throwing a stone on water, it touches the water an flies back up agains a little distance and a couple of meters away it touches the water again.

(Like throwing a flat stone towards the water)

Ancestors

In a kingdom, sometime, somewhere there was a kind of tradition,

A tradition to give forefathers and ancestors dedicated time in their future-offspring.

to help them get peace in their afterlife. And get done with tasks they started but not finished.

It helped to get the ancestors more calm, and create a kind of devotion to give ancestors a timesacrifice.

It was done by wishing or praying the name of the ancestor and telling may i be a vessel for your goodness, May i be a vessel to give your tasks a place to rest.

There was danger in it however because when it were aggressive or rude people the life of the one sacrificing time in their lives could be harmed or be in danger too.

It was a honorable task as they thought in that kingdom.

To give your ancestors a bit of your time. for example a couple of hours or days.

And by praying for it, also for a fixed length.

May the ancestors be honored by their offspring. And having respect for what age it has become.

Eternal Life

Epilogue

Good Reader,

May thou be blessed with wisdom and goodness.

May thou receive the knowledge to discern good and evil.

The light of prayer shines on our society,
and gives the intentions to goodness a new shine.

The line of prayer is as a path leading to that
city full of light and precious stones.

Stones worth the health of all humans.

Stones worth the peace in which a society has welfare.

I wish the light of healing and the compassion of painrelief.

May suffering come to an end in the wisdom of
our Creator. The source of our intelligence.

Humanity gives humans their goal, their purpose.

To have civilisation in which we are part of a greater
scheme.

May the reader get the attention of that higher force.

The force some call Allmighty, some call Creator,
some the divine source.
